Sex Determination in Plants

BIOS
SCIENTIFIC
PUBLISHERS

Oxford • Washington DC

Contents

Contributors	ix
Abbreviations	xiii
Preface	xv
1. MADS-box factors in hermaphrodite flower development	1
<i>B. Causer, I. Weir and B. Davies</i>	
Introduction	1
Functions of the plant MADS-box factors	2
Properties of plant MADS-box factors	7
Future directions	19
References	20
2. The evolution of dioecy and plant sex chromosome systems	25
<i>D. Charlesworth and D.S. Guttman</i>	
Introduction: why are plant sex chromosomes of particular interest?	25
Sex and gender conditions in plants	25
Distribution of dioecy and sex chromosomes in flowering plants	27
Genetics of sex determination in dioecious angiosperms	30
Why are sex-determining loci linked?	31
Pathways to dioecy: evidence for the gynodioecy pathway	32
The transition to dioecy from gynodioecy: establishment of males in gynodioecious populations	35
Evolution of sex chromosomes	37
Have plant Y chromosomes degenerated?	40
Molecular genetics of plant Y chromosomes	41
Discussion	44
References	44
3. Molecular approaches to the study of sex determination in dioecious <i>Silene latifolia</i>	51
<i>C.P. Scutt, S.E. Robertson, M.E. Willis, Y. Kamisugi, Y. Li, M.R. Shenton, R.H. Smith, H. Martin and P.M. Gilmartin</i>	
Background and introduction	51
Genomic approaches to studying sex determination	57
Gene expression studies during dioecious flower development	60
Genetic approaches	67
Future prospects	67
References	70
4. Male sex-specific DNA in <i>Silene latifolia</i> and other dioecious plant species	73
<i>I.S. Donnison and S.G. Grant</i>	
Introduction	73
Genetics of sex	73
Isolation of male-specific DNA fragments	74

Mapping of the Y chromosome in <i>Silene latifolia</i>	74
Homology of male-specific DNA fragments with other DNAs and proteins	75
Conclusions	84
References	85
5. The Y chromosome of white campion: sexual dimorphism and beyond	89
<i>A. Lardon, A. Aghmir, S. Georgiev, F. Monéger and I. Negrutiu</i>	
Introduction	89
Generating the experimental tools: screening for Y-deleted sexual mutants	92
GSF – an evolutionary innovation, SPF – an evolutionary accident?	95
Conclusions	97
References	98
6. The role of DNA methylation in plant reproductive development	101
<i>B. Vyskot</i>	
Introduction	101
DNA methylation and development	102
Experimental studies on dioecious <i>Melandrium album</i>	106
Conclusions	115
References	116
7. Sex determination by X:autosome dosage: <i>Rumex acetosa</i> (sorrel)	121
<i>C.C. Ainsworth, J. Lu, M. Winfield and J.S. Parker</i>	
Sex chromosome-based sex-determination systems: active Y versus X:autosome dosage	121
Morphology and development of <i>Rumex acetosa</i> flowers	122
Genetic control of sex differentiation in <i>Rumex acetosa</i>	125
Genes involved in sex differentiation	128
The role of the autosomes	129
Molecular markers for sex chromosomes	129
Isolation of sex determination genes	130
Dosage compensation in <i>Rumex acetosa</i>	133
Conclusions	133
References	134
8. Sex expression in hop (<i>Humulus lupulus</i> L. and <i>H. japonicus</i> Sieb. et Zucc.): floral morphology and sex chromosomes	137
<i>H. Shephard, J.S. Parker, P. Darby and C.C. Ainsworth</i>	
Introduction	137
Vegetative development of <i>Humulus lupulus</i>	138
Floral development of <i>Humulus lupulus</i>	138
Development of the male flower	138
Development of the female flower	140
Development of male and female flowers on monoecious lines	141
Sex chromosomes in <i>Humulus lupulus</i> and <i>H. japonicus</i>	142
Sensitivity of sex expression in hop to plant hormones	144
Conclusions and current work	145
References	146

9.	Search for genes involved in asparagus sex determination	149
	<i>G. Marziani, E. Caporali and A. Spada</i>	
	<i>Asparagus officinalis</i> : an important crop plant	149
	Genetic mechanism of sex determination in asparagus	150
	The development of male and female flowers	150
	Physiological and biochemical changes during sex differentiation	152
	The doubled-haploid clones of asparagus	153
	Search for DNA sequences associated with sex chromosomes	154
	Sex chromosome labelling	158
	Early diagnosis of gender	158
	Discussion	159
	Future perspective	160
	References	160
10.	Sex determination in <i>Dioscorea tokoro</i> , a wild yam species	163
	<i>R. Terauchi and G. Kahl</i>	
	Introduction	163
	Genetic analysis of sex determination in <i>D. tokoro</i>	165
	Towards cloning the sex gene of <i>Dioscorea</i>	170
	References	170
11.	Sex control in <i>Actinidia</i> is monofactorial and remains so in polyploids	173
	<i>R. Testolin, G. Cipriani and R. Messina</i>	
	Introduction	173
	Phenotypic gender variants naturally occurring in <i>Actinidia</i> species	174
	The genetic control of sex as inferred from gender segregation in progeny	176
	The establishment of disomic sex control in polyploids	178
	The genes involved	178
	Mapping and cloning sex-determining genes	179
	Biochemical aspects and their relationship with sex-controlling genes	180
	References	180
12.	Maize sex determination	183
	<i>E.E. Irish</i>	
	Introduction	183
	Genetics of sex determination in maize	184
	Tassel seed genes regulate inflorescence meristem fate	186
	References	187
13.	Male to female conversion along the cucumber shoot: approaches to studying sex genes and floral development in <i>Cucumis sativus</i>	189
	<i>R. Perl-Treves</i>	
	Introduction	189
	The cucumber floral bud: transition from bisexual to unisexual development	190
	Sex expression along the cucumber shoot: sex types and sex phases of the whole plant	192
	Inheritance of sex determination in cucumber	193
	Environmental effects on sex expression	196
	Chemical treatments that affect sex expression	196
	Role of endogenous growth regulators in sex expression	198

Application of the above studies to agriculture and breeding	203
Molecular studies on cucumber sex expression	204
Concluding remarks	212
References	212
Index	217
