

# Microbial Evolution

GENE ESTABLISHMENT, SURVIVAL,  
AND EXCHANGE

---

edited by

**ROBERT V. MILLER**

**MARTIN J. DAY**

**ASM  
PRESS**

WASHINGTON, D.C.

# CONTENTS

*Contributors ix*

*Preface xiii*

## **I. INTRACELLULAR MECHANISMS FOR GENERATING DIVERSITY 1**

---

### **1. Mutagenesis and DNA Repair: The Consequences of Error and Mechanisms for Remaining the Same**

*John R. Battista and Ashlee M. Earl*

3

### **2. RecA-Dependent Mechanisms for the Generation of Genetic Diversity**

*Steven J. Sandler and Klaus Nüsslein*

21

### **3. Nonhomologous Recombination**

*François Cornet and Michael Chandler*

36

### **4. Gene Duplication and Gene Loading**

*Renato Fani*

67

### **5. Multiple Chromosomes**

*Chris Mackenzie, Samuel Kaplan, and Madhusudan Choudhary*

82

**6. Generating Intracellular Processes**

*Martin J. Day and Robert V. Miller*

102

**II. INTERCELLULAR MECHANISMS FOR  
GENE MOVEMENT 109**

---

**7. Bacterial Conjugation: Cell-Cell Contact-Dependent  
Horizontal Gene Spread**

*Günther Koraimann*

111

**8. Conjugative and Mobilizable Transposons**

*Abigail A. Salyers, Gabrielle Whittle, and Nadja B. Shoemaker*

125

**9. Bacteriophage-Mediated Transduction: An Engine for  
Change and Evolution**

*Robert V. Miller*

144

**10. Transformation**

*Martin J. Day*

158

**11. Horizontal Gene Transfer and the Real World**

*Robert V. Miller and Martin J. Day*

173

**III. MECHANISMS FOR GENE ESTABLISHMENT  
AND SURVIVAL 179**

---

**12. Stationary-Phase-Induced Mutagenesis: Is Directed  
Mutagenesis Alive and Well within Neo-Darwinian Theory?**

*Ronald E. Yasbin and Mario Pedraza-Reyes*

181

**13. Temporal Segregation: Succession in Biofilms**

*Susse Kirkelund Hansen and Søren Molin*

192

**14. Spatial Segregation: The Deep Subsurface Story**

*David L. Balkwill*

214

**15. Are You Out There? Intercellular Signaling in the  
Microbial World**

*Mike Manefield, Sarah L. Turner, Andrew K. Lilley, and Mark J. Bailey*

231

**16. Gene Associations in Bacterial Pathogenesis:  
Pathogenicity Islands and Genomic Deletions**

*Eshwar Mahenthiralingam*

249

**17. Strategies in Antagonistic and Cooperative Interactions**

*Angela E. Douglas*

275

**18. Why Are Genes Lost? Why Do Genes Persist?**

*Martin J. Day and Robert V. Miller*

290

**IV. MECHANISMS FOR DETECTING  
GENOMIC DIVERSITY 295**

---

**19. Horizontal Transfer, Genomic Diversity, and  
Genomic Differentiation**

*Roger Milkman*

297

**20. Horizontal Gene Transfer and Prokaryotic Genome Evolution**

*I. King Jordan and Eugene V. Koonin*

319

**21. What Makes a Bacterial Species? When Molecular Sequence  
Data Are Used, Is rRNA Enough?**

*Lorraine G. van Waasbergen*

339

**22. Can We Understand Bacterial Phylogeny, and Does It  
Make Any Difference Anyway?**

*Robert V. Miller and Martin J. Day*

357

**Index**
