

HANDBOOK of LABORATORY ANIMAL BACTERIOLOGY

Axel Kornerup Hansen

CRC Press

Boca Raton London New York Washington, D.C.

Contents

1. Strategies for sampling animals for bacteriological examination	1
1.1 Bacterial interference with research	1
1.2 Bacteriological examination of healthy animals	5
1.2.1 The aim of examining healthy animals	5
1.2.2 Sampling strategies	6
1.2.2.1 Random sampling	6
1.2.2.2 Calculation of the sample size	7
1.2.2.3 Sampling frequency	9
1.2.2.4 Defining the microbiological entity	10
1.2.3 Immunosuppression of animals prior to sampling (stress testing)	10
1.2.4 Screening vs. profiling	11
1.3 Bacteriological examination of diseased animals	11
References	12
2. Sampling procedures	15
2.1 Planning the work	15
2.2 Euthanasia	15
2.3 Blood sampling	18
2.4 Instruments and sterilizing procedures during sampling	20
2.5 Opening and inspecting the carcass	21
2.6 Sampling from various organs	21
References	46
3. Cultivation methods	47
3.1 The choice of media	47
3.2 Incubation of media	49
3.3 Isolation of bacteria	51
References	54
4. Identification of bacteria	55
4.1 Initial characterization of the isolates	55
4.2 Conclusive identification	56

4.3	Specific techniques used for identification of bacteria	60
4.3.1	Gram-stainability tests	60
4.3.2	Other methods used for describing the shape of bacteria.....	60
4.3.3	Motility tests	62
4.3.4	Test for aerobic and anaerobic growth.....	62
4.3.5	Catalase test	63
4.3.6	Cytochrome oxidase test.....	64
4.3.7	Acid-fast or spore staining	64
4.3.8	Carbohydrate fermentation and utilization assays	64
4.3.9	Disc methods	65
4.3.10	Other assays.....	68
4.3.11	Commercial test kits.....	68
	References.....	71
5.	Immunological methods	75
5.1	Agglutination.....	76
5.2	Immunofluorescence techniques	77
5.2.1	Diagnosing the presence of bacteria in a sample.....	77
5.2.2	The immunofluorescence assay	81
5.3	Immunoenzymatic staining.....	82
5.4	Enzyme-linked immunosorbent assay	86
5.4.1	Principles.....	86
5.4.2	The microtiter plates.....	87
5.4.3	The antigen	93
5.4.4	Antibodies, enzymes, and substrates	93
5.4.5	Coating the wells	94
5.4.6	Blocking the wells.....	94
5.4.7	Performing the assay.....	95
5.4.8	Control sera.....	95
5.4.9	Interpretation of the OD-value	97
5.5	Immunoblotting	98
	References.....	99
6.	Molecular biological methods	101
6.1	Detection by molecular probes	105
6.1.1	Solid-phase hybridization.....	105
6.1.2	Solution-phase hybridization	105
6.2	Amplification of nucleic acids	105
6.2.1	Principle.....	105
6.2.2	The polymerase enzyme.....	108
6.2.3	Reverse transcriptase RNA PCR	108
6.2.4	The template sequence and the primers.....	109
6.2.5	Preparation of the sample	109
6.2.6	Detection of the PCR product.....	109

6.2.7	Contamination of the amplification process	110
6.3	Restriction analysis of chromosomal DNA	110
	References	111
7.	Gram-positive cocci	113
7.1	Micrococcaceae	114
7.1.1	<i>Micrococcus</i>	114
7.1.2	<i>Staphylococcus</i>	114
7.1.2.1	Characteristics of infection	114
7.1.2.2	Characteristics of the agent	116
7.1.2.2.1	Morphology	116
7.1.2.2.2	Cultivation	117
7.1.2.2.3	Isolation sites	118
7.1.2.2.4	Differentiation and identification	118
7.2	Streptococcaceae	118
7.2.1	<i>Streptococcus</i>	118
7.2.1.1	Characteristics of the infection	118
7.2.1.1.1	Epidemiology	118
7.2.1.1.2	Clinical disease and pathology	120
7.2.1.1.3	Interference with research	121
7.2.1.2	Characteristics of the agent	121
7.2.1.2.1	Morphology	121
7.2.1.2.2	Media	121
7.2.1.2.3	Sampling sites	121
7.2.1.2.4	Immunological identification of isolates	121
7.2.1.2.5	Biochemical identification of isolates	122
7.2.2	<i>Enterococcus</i>	123
7.2.3	<i>Aerococcus</i>	123
7.2.4	<i>Gemella</i>	123
7.3	Peptococcaceae	124
	References	124
8.	Gram-positive rods isolated by simple cultivation	127
8.1	Regular nonacid-fast, nonsporogenic rods	128
8.1.1	Obligate aerobic regular nonsporogenic rods	128
8.1.2	Facultatively anaerobic regular nonsporogenic rods	130
8.1.2.1	<i>Lactobacillus</i>	130
8.1.2.2	<i>Erysipelothrix</i>	131
8.1.2.2.1	Characteristics of infection	131
8.1.2.2.2	Characteristics of the agent	131
8.1.2.3	<i>Listeria</i>	132
8.1.2.3.1	Characteristics of infection	132
8.1.2.3.2	Characteristics of the agent	133

8.2	Coryneform bacteria.....	134
8.2.1	<i>Corynebacterium</i> spp.....	134
8.2.1.1	Characteristics of infection	134
8.2.1.2	Characteristics of the agent	137
8.2.1.2.1	Morphology	137
8.2.1.2.2	Cultivation	138
8.2.1.2.3	Isolation sites	138
8.2.1.2.4	Differentiation and identification.....	138
8.2.2	<i>Arcanobacterium</i>	138
8.2.3	<i>Rhodococcus</i>	139
8.2.4	<i>Oerskovia</i>	139
8.2.5	<i>Eubacterium</i>	139
8.3	Gram-positive rods forming mycelium or hyphae	140
8.3.1	<i>Actinomyces</i> spp.	140
8.3.1.1	Characteristics of infection	140
8.3.1.2	Characteristics of the agent	140
8.4	Gram-positive sporogenic rods	141
8.4.1	<i>Bacillus</i>	141
8.4.1.1	Characteristics of infection	141
8.4.1.2	Characteristics of the agent	142
8.4.2	<i>Clostridium</i>	143
8.4.2.1	Characteristics of infection	143
8.4.2.2	Characteristics of the agent	145
8.4.2.2.1	Morphology	145
8.4.2.2.2	Cultivation	146
8.4.2.2.3	Isolation sites	146
8.4.2.2.4	Differentiation and identification.....	146
8.4.2.2.5	Toxin detection	147
	References.....	150
9.	Gram-positive rods not cultivated by simple techniques.....	153
9.1	<i>Mycobacterium</i> spp.....	154
9.1.1	Characteristics of infection	154
9.1.2	Characteristics of the agent	154
9.1.2.1	Morphology	154
9.1.2.2	Cultivation.....	154
9.1.2.3	Isolation sites	156
9.1.2.4	Differentiation and identification	156
9.1.3	Safety	156
9.2	<i>Clostridium piliforme</i>	158
9.2.1	Characteristics of infection	158
9.2.2	Characteristics of the agent.....	159
9.2.2.1	Morphology.....	159

9.2.2.2	Cultivation.....	159
9.2.2.3	Staining	160
9.2.2.4	Differentiation and identification	160
9.2.2.5	Serology	160
9.2.2.6	Molecular biology	160
References		161
10.	Facultatively anaerobic Gram-negative bacteria	165
10.1	Enterobacteriaceae	166
10.1.1	Characteristics of infection	166
10.1.1.1	<i>Escherichia</i>	167
10.1.1.2	<i>Citrobacter</i>	167
10.1.1.3	<i>Salmonella</i>	168
10.1.1.4	<i>Klebsiella</i>	168
10.1.1.5	<i>Enterobacter</i>	168
10.1.1.6	<i>Proteus</i>	168
10.1.1.7	<i>Morganella</i>	168
10.1.1.8	<i>Yersinia</i>	169
10.1.1.9	Other species	169
10.1.2	Characteristics of the agent	169
10.1.2.1	Sampling and cultivation	169
10.1.2.2	Identification	171
10.1.3	Safety	176
10.2	Pasteurellaceae	177
10.2.1	<i>Pasteurella</i>	177
10.2.1.1	Characteristics of infection	177
10.2.1.2	Characteristics of the agent	177
10.2.1.2.1	Morphology	177
10.2.1.2.2	Cultivation	178
10.2.1.2.3	Isolation sites	178
10.2.1.2.4	Differentiation and identification	178
10.2.1.2.5	Serology	178
10.2.2	<i>Actinobacillus</i>	179
10.2.2.1	Characteristics of infection	179
10.2.2.2	Characteristics of the agent	180
10.2.2.2.1	Morphology	180
10.2.2.2.2	Cultivation	180
10.2.2.2.3	Isolation sites	180
10.2.2.2.4	Differentiation and identification	180
10.2.2.2.5	Serology	181
10.2.2.2.6	Molecular biology	181
10.2.3	<i>Haemophilus</i>	181
10.2.3.1	Characteristics of infection	181
10.2.3.2	Characteristics of the agent	181

10.3	<i>Streptobacillus moniliformis</i>	182
10.3.1	Characteristics of infection.....	182
10.3.2	Characteristics of the agent.....	184
10.3.2.1	Morphology	184
10.3.2.2	Cultivation.....	184
10.3.2.3	Isolation sites	184
10.3.2.4	Differentiation and identification	184
10.3.2.5	Serology	184
10.4	Vibrionaceae.....	185
	References.....	186
11.	Obligate aerobic, Gram-negative rods	191
11.1	Motile, aerobic, Gram-negative rods	192
11.1.1	<i>Pseudomonas</i>	192
11.1.1.1	Characteristics of infection	192
11.1.1.2	Characteristics of the agent	194
11.1.1.2.1	Morphology	194
11.1.1.2.2	Cultivation	195
11.1.1.2.3	Isolation sites	195
11.1.1.2.4	Differentiation and identification	195
11.1.1.2.5	Serology	195
11.1.2	<i>Xanthomonas</i> , <i>Sphingomonas</i> , <i>Chryseomonas</i> , <i>Agrobacterium</i> , and <i>Burkholderia</i>	195
11.1.3	<i>Bordetella</i>	197
11.1.3.1	Characteristics of infection	197
11.1.3.2	Characteristics of the agent	197
11.1.3.2.1	Morphology	197
11.1.3.2.2	Cultivation	197
11.1.3.2.3	Isolation sites	197
11.1.3.2.4	Differentiation and identification	197
11.1.3.2.5	Serology	197
11.2	Non-motile, aerobic, Gram-negative rods that can easily be cultivated	198
11.2.1	<i>Acinetobacter</i>	198
11.2.2	<i>Flavobacterium</i>	198
11.2.3	<i>Weeksella</i>	198
11.3	Non-motile, aerobic, Gram-negative rods that are difficult to cultivate.....	198
11.3.1	<i>Francisella</i>	200
11.3.1.1	Characteristics of infection	200
11.3.1.2	Characteristics of the agent	200
11.3.1.3	Safety	200
	References.....	201

12. Obligate anaerobic and microaerophilic	
Gram-negative bacteria	203
12.1 Bacteroidaceae	204
12.1.1 <i>Fusobacterium</i>	204
12.1.1.1 Characteristics of infection	204
12.1.1.2 Characteristics of the agent	204
12.1.1.2.1 Morphology	204
12.1.1.2.2 Cultivation	206
12.1.1.2.3 Differentiation and identification	206
12.2 Microaerophilic curved bacteria	206
12.2.1 <i>Campylobacter</i>	206
12.2.1.1 Characteristics of infection	206
12.2.1.2 Characteristics of the agent	208
12.2.1.2.1 Morphology	208
12.2.1.2.2 Cultivation	208
12.2.1.2.3 Differentiation and identification	208
12.2.1.3 Safety	209
12.2.2 <i>Helicobacter</i>	209
12.2.2.1 Characteristics of infection	209
12.2.2.2 Characteristics of the agent	210
12.2.2.2.1 Morphology	210
12.2.2.2.2 Isolation sites and cultivation	210
12.2.2.2.3 Differentiation and identification	210
12.2.2.2.4 Serology	211
12.2.2.2.5 Molecular biology	211
12.3 Cilia-associated respiratory bacillus	211
12.3.1 Characteristics of infection	211
12.3.2 Characteristics of the agent	212
12.3.2.1 Isolation	212
12.3.2.2 Identification	212
