Contents

<i>Acknowledgements</i>	<i>page ix</i>
<i>Introduction</i>	1
Part I Where do laws of nature come from?	21
1 Fundamentalism versus the patchwork of laws	23
2 Fables and models	35
3 Nomological machines and the laws they produce	69
Part II Laws and their limits	75
<i>The laws we test in physics</i>	
4 Aristotelian natures and the modern experimental method	77
<i>Causal laws</i>	
5 Causal diversity; causal stability	104
<i>Current economic theory</i>	
6 <i>Ceteris paribus</i> laws and socio-economic machines	137
<i>Probabilistic laws</i>	
7 Probability machines: chance set-ups and economic models	152

Part III The boundaries of quantum and classical physics and the territories they share	177
8 How bridge principles set the domain of quantum theory	179
9 How quantum and classical theories relate	211
<i>Bibliography</i>	234
<i>Index</i>	242
