

Jan Kmenta

Elements of Econometrics

SECOND EDITION

Ann Arbor

THE UNIVERSITY OF MICHIGAN PRESS

Contents

PART ONE Basic Statistical Theory

1. Introduction to Statistical Inference	3
1-1 Basic Concepts of Statistical Inference	3
1-2 The Nature of Statistical Inference	7
1-3 Sampling Distributions	9
1-4 Properties of Sampling Distributions	12
1-5 Derivation of Sampling Distributions	15
Exercises	16
2. Experimental Derivation of Sampling Distributions	19
2-1 Sampling Distribution of Sample Proportion of Successes	20
2-2 Sampling Distribution of Sample Mean	24
Exercises	29
3. Probability and Probability Distributions	32
3-1 Sets and Sample Spaces	34
3-2 Permutations and Combinations	36
3-3 Basic Theorems of Probability Theory	43
3-4 Bayes Theorem	50
3-5 Discrete Random Variables and Probability Functions	53
3-6 Continuous Random Variables and Probability Functions	59

3-7	Mathematical Expectation	62	
	Exercises	72	
4.	Theoretical Derivation of Sampling Distributions		77
4-1	Sampling Distribution of Sample Proportion of Successes: Binomial Distribution	78	
4-2	Normal Distribution as the Limiting Case of Binomial Distribution	85	
4-3	Sampling Distribution of Sample Mean	97	
	Exercises	108	
5.	Tests of Hypotheses		110
5-1	Design and Evaluation of Tests	110	
5-2	Distribution of Selected Test Statistics	135	
	Exercises	152	
6.	Estimation		155
6-1	Properties of Estimators	156	
6-2	Methods of Estimation	172	
6-3	Confidence Intervals	187	
6-4	Bayesian Inference	192	
	Exercises	198	
 PART TWO Basic Econometric Theory			
7.	Simple Regression		203
7-1	Relations Between Variables	203	
7-2	The Regression Model	207	
7-3	Estimation of the Regression Parameters	211	
7-4	Further Results of Statistical Inference	224	
	Exercises	256	
8.	Violations of Basic Assumptions		260
8-1	Nonnormality and Nonzero Mean	261	
8-2	Heteroskedasticity	269	

8-3	Autocorrelated Disturbances	298	
8-4	Stochastic Explanatory Variable	334	
	Exercises	341	
9.	Estimation with Deficient Data		346
9-1	Errors of Measurement	346	
9-2	Estimation from Grouped Data	366	
9-3	Estimation When Some Observations Are Missing	379	
	Exercises	388	
10.	Multiple Regression		392
10-1	Estimation of Regression Parameters	392	
10-2	Further Results of Statistical Inference	403	
10-3	Multicollinearity	430	
10-4	Specification Errors	442	
	Exercises	455	
11.	Formulation and Estimation of Special Models		460
11-1	Models with Binary Regressors	461	
11-2	Models with Restricted Coefficients	476	
11-3	Nonlinear Models	503	
11-4	Distributed Lag Models	527	
11-5	Models with Qualitative Dependent Variables	547	
11-6	Models with Limited Dependent Variables	560	
11-7	Models with Varying Coefficients	566	
11-8	Models with Unobservable Variables	579	
11-9	Disequilibrium Models	587	
11-10	Model Choice	593	
	Exercises	600	
12.	Generalized Linear Regression Model and Its Applications		607
12-1	Generalized Linear Regression Model	607	
12-2	Pooling of Cross-section and Time-Series Data	616	
12-3	Seemingly Unrelated Regressions	635	
	Exercises	648	

13. Simultaneous Equation Systems**651**

- 13-1 Description of Simultaneous Equation Systems 652
- 13-2 The Identification Problem 660
- 13-3 Single-Equation Methods of Estimation 672
- 13-4 System Methods of Estimation 695
- 13-5 Estimation of Models with Nonspherical Disturbances 704
- 13-6 Comparison of Alternative Methods of Estimation and Special Topics 711
- 13-7 Analysis of Dynamic Econometric Models 723
- Exercises 731

APPENDIX**735**

- A. Algebra of Summations 735
- B. Elements of Matrix Algebra 738
- C. Asymptotic Distributions in Regression Models with Stochastic Explanatory Variables *by* E. P. Howrey and S. H. Hymans 749
- D. Statistical Tables 758
- E. The Greek Alphabet. 771

INDEX**773**
