Contents

<i>Preface</i>	xvii
<i>Foreword</i>	xxi

CHAPTER 1

Introduction to the Structure, Properties, and Reactions of DNA

A. Introduction	1
B. The Structure of Nucleic Acids	3
1. Bases	3
2. Sugars	5
3. Nucleosides and Nucleotides	8
4. The Phosphodiester Bond	9
C. The Structure of Double-Stranded DNA	11
1. Hydrogen Bonding and Base Stacking Hold the DNA Double Helix Together	12
2. Wobble, Tautomerization, and Ionization Cause “Deviant” Base Pairs	15
3. Helix Parameters	21

4. B-Form DNA	25	
5. A-Form DNA	25	
6. C-, D-, and T-DNA	30	
7. Z-DNA	30	
D. The Biological Significance of Double Strandedness		32
E. Sequence-Dependent Variation in the Shape of the DNA	32	
F. Physical Properties of Double-Stranded DNA		34
1. Ultraviolet Absorption Spectra of DNA	34	
2. Denaturation and Renaturation	34	
3. DNA Hybridization	37	
G. Chemicals That React with DNA		38
1. Nucleophiles	38	
2. Electrophiles	40	
3. DNA Cross-Linking Reagents	45	
H. DNA Sequencing Strategies		47
1. Maxam and Gilbert Chemical Sequencing of DNA	47	
2. Sanger Dideoxyribonucleotide Sequencing of DNA	49	
I. Enzymes That Modify DNA Structure		52
1. DNA Replication	52	
2. Genetic Recombination	53	
3. DNA Repair	53	
4. Transcription and Gene Regulation	54	
5. Transcription Factors	54	
6. Restriction and Modification	55	
7. DNA Degradation	56	

CHAPTER 2

DNA Bending

A. Introduction	58	
B. The Wedge Model and Junction Model for DNA Bending	60	
1. Sequence Induced Bending of DNA	60	
2. The Wedge Model for DNA Bending	61	
3. The Junction Model for DNA Bending	65	

4. Tests of the Phasing Hypothesis	66
5. Sequence Requirements for DNA Bending	67
6. Analysis of $(GA_4T_4C)_n$ and $(GT_4A_4C)_n$ Leads to Development of a Refined Wedge Model	69
7. A Refined Junction Model	71
8. Does Either the Junction Model or the Wedge Model Adequately Explain DNA Bending?	72
C. Protein-Induced DNA Bending	73
D. The Biology of DNA Bending	75
1. DNA Bending and Gene Regulation	75
2. DNA Bending and DNA Replication	78
3. DNA Bending and Site-Specific Integration of Bacteriophage λ	78
4. DNA Bending and DNA Repair	80
E. Details of Selected Experiments	83
1. A-Tract Phasing and DNA Bending	83
2. Phasing and DNA Looping	85
3. Determining the Three-Dimensional Organization of the λ Site-Specific Recombination Complex	88

CHAPTER 3

DNA Supercoiling

A. Introduction	95
B. Heterogeneity in Forms of a DNA Molecule	97
C. Supercoiled Forms of DNA	99
1. $L = T + W$	99
2. Relaxed DNA	99
3. Negatively Supercoiled DNA	101
4. Positively Supercoiled DNA	104
D. Supercoils: Interwound or Toroidal Coils?	104
E. DNA Knots and Catenanes	105
F. Superhelical Density and the Specific Linking Difference of DNA	106
G. The Energetics of Supercoiled DNA	108

H. The Binding to Supercoiled DNA by Intercalation	109
I. Effects of Temperature and Salt on Helical Winding and DNA Supercoiling	110
J. The Biology of Supercoiled DNA	111
1. Topological Domains of DNA: A Requirement for Supercoiling	111
2. DNA Topoisomerases	113
3. Mechanisms of Supercoiling in Cells	119
4. Summary of the Effects of Supercoiling on the Structure of DNA	126
5. The Role of Supercoiling in Gene Expression	126
6. The Role of Supercoiling in DNA Replication	128
K. Details of Selected Experiments	129
1. The Goldstein and Drlica Experiment	129
2. Agarose Gel Electrophoresis	131

C H A P T E R 4

Cruciform Structures in DNA

A. Introduction	134
B. Formation and Stability of Cruciforms	138
1. Superhelical Energy Requirement for Cruciform Formation and Cruciform Stability	138
2. Effects of Base Composition on the Formation of Cruciforms	139
3. Effects of Temperature on the Formation and Thermal Stability of Cruciforms	142
4. Effects of Salt on the Cruciform Transition: C-Type Cruciform Formation	146
5. The Removal of Cruciforms from Supercoiled DNA	149
C. Assays for Cruciform Structures in DNA	153
1. Nuclease Cutting at the Loop of Hairpin Stems	153
2. Chemical Modification at the Loop of Hairpin Stems	154
3. Analysis Using Cruciform Resolvases	158
4. The Psoralen Interstrand Cross-Linking Assay for Cruciforms	158
5. Removal of Negative Superhelical Turns by Cruciform Formation	159
6. Loss of Restriction Digestion at the Center of an Inverted Repeat	160
7. Antibodies That Bind to Cruciform Structures	160

D. Evidence for the Existence of Cruciforms <i>in Vivo</i>	160
1. Considerations of an Ideal <i>in Vivo</i> Assay for DNA Structure	160
2. Application of the Psoralen Cross-Linking Assay for Quantitating Cruciforms	161
3. Nuclease Assays for Cruciforms in Cells	163
4. Detection of Cruciforms in Cells Using Chemical Probes	163
5. Analysis of DNA Supercoiling as an Indication of Cruciform Formation in Cells	164
6. Application of Cruciform Antibodies to the Analysis of Cruciforms in Eukaryotic Cells	164
E. Biology of Cruciforms: Do Cruciforms Have a Biological Function?	165
1. The Biology of Inverted Repeated DNA Sequences	166
2. Cruciforms as Models of Holliday Recombination Intermediates	169
3. The Genetic Instability of Long Inverted Repeats in <i>Escherichia coli</i>	173
F. Specific Experiments	177
1. Two-Dimensional Agarose Gels	177

C H A P T E R 5

Left-Handed Z-DNA

A. Introduction	179
B. The Structure of Z-DNA	183
1. The Left-Handed Z-DNA Helix	183
2. Sugar Pucker and Glycosidic Bond Rotation in Z-DNA	183
3. Bases Do a Backflip to Form Z-DNA	184
4. The Dinucleotide Repeat in Z-DNA and Base Stacking	184
5. The B-Z Junction	188
C. Formation and Stability of Z-DNA	188
1. The Sequence Requirement for Z-DNA	188
2. Chemical Modifications Stabilize Z-DNA	188
3. The Effect of Cations on the B-to-Z Equilibrium	189
4. DNA Supercoiling Stabilizes Z-DNA	189
5. Protein-Induced Formation of Z-DNA	190

D. Assays for Z-DNA	192	
1. Z-DNA Antibodies	192	
2. Relaxation of Negative Supercoils as an Assay for Z-DNA		194
3. Chemical Probes of Z-DNA	194	
4. Assays Involving the Restriction/Modification System		198
E. Z-DNA <i>in Vivo</i>	198	
1. Psoralen Photobinding to DNA in Living Cells		198
2. Application of Restriction/Modification Assays in Living Cells	199	
3. Application of a Linking Number Assay for Z-DNA in Living Cells	199	
4. Application of Chemical Probes for Z-DNA <i>in Vivo</i> : Application of OsO ₄	201	
5. Z-DNA Antibodies as <i>in Vivo</i> Assays for Z-DNA in Eukaryotic Cells	202	
F. Possible Biological Functions for Z-DNA	207	
1. Possible Roles of Z-DNA in Gene Expression	207	
2. Possible Roles of Z-DNA in Genetic Recombination		213
3. Z-DNA Binding Proteins	215	

C H A P T E R 6

Triplex DNA

A. Introduction	217	
1. Intermolecular Triplex DNA	217	
2. Intramolecular Triplex DNA	219	
B. Formation and Stability of Intramolecular Triple-Stranded DNA	220	
1. General Sequence Requirements: The Third Strand Pairing Rule and Mirror Repeat Symmetry	220	
2. Low pH Intramolecular Triplex Structures	221	
3. DNA Supercoiling Is Required for Intramolecular Triplex Structures	225	
4. Neutral pH Intramolecular Triplex Structures	228	
5. (CT) _n ·(GA) _n Triple Helices: The Mechanism and Topology of Intramolecular Triplex Formation	228	
6. Effect of Base Composition and Sequence Organization on the Formation and Stability of Triplex DNA in Mirror Repeats		235
7. The Kinetics of Intramolecular Triplex Formation	238	

C. Assays for Intramolecular Triplex DNA	238
1. Two-Dimensional Agarose Gels	238
2. Chemical Probes for Intramolecular Triplex Structures	239
3. Nucleases as Probes for Intramolecular Triplexes	240
4. Photofootprinting	240
D. Evidence for the Existence of Triplex DNA <i>in Vivo</i>	241
1. Evidence for Intramolecular Triplex DNA Using a Methylation-Based Assay	241
2. Chemical Probes Provide Evidence for Intramolecular Triplex DNA	242
3. Psoralen Photobinding as a Probe for Intramolecular Triplex DNA	242
E. The Biology of Triple-Stranded DNA	243
1. Potential Biology of Polypurine · Polypyrimidine Tracts Existing as B-DNA Protein Binding Sites	243
2. Potential Biology of Polypurine · Polypyrimidine Sequences Existing as an Intramolecular Triplex <i>in Vivo</i> : Implications for Gene Expression	244
3. Potential Role of Intramolecular Triplexes in Replication: Are Triplex Regions Replication Termination Regions?	249
4. Potential Role of Intramolecular Triplexes in Recombination	251
5. Potential Role of Triplex Structures at Telomeres	251
F. Intermolecular Triplex DNA	254
1. Application of Intermolecular Triplexes to Modify Gene Expression	254
2. Application of Intermolecular Triplexes to Covalently Modify DNA	255
3. Generalized Genetic Recombination Involves an Intermolecular Triplex	256

CHAPTER 7

Miscellaneous Alternative Conformations of DNA

A. Introduction	259
B. Slipped, Mismatched DNA	259
C. DNA Unwinding Elements	264
1. Unwinding at the <i>Escherichia coli</i> Origin of Replication	268
D. Parallel-Stranded DNA	269

E. Four-Stranded DNA	272	
1. Parallel Four-Stranded DNA, G-Quartet Structure		272
2. Four-Stranded Structures at Telomeres	275	
F. Anisomorphic DNA	280	
G. Nodule DNA and Higher-Order Pu-Py Structures		282
H. Triplet Repeats, DNA Structure, and Human Genetic Disease	283	
1. The Mechanism of Mutation	284	

CHAPTER 8

DNA – Protein Interactions

A. Introduction	287	
B. General Considerations on Protein Binding		289
1. Bases in the Major and Minor Grooves Are Available for Specific Protein Recognition	289	
2. The Sugar-Phosphate Backbone Is Available for Nonspecific Protein Recognition	294	
3. Dimeric Binding Sites in DNA	294	
4. The Organization of Dimeric Binding Sites in DNA		295
C. Specific DNA-Protein Interactions		297
1. Interaction of the Helix-Turn-Helix Motif with DNA: General Considerations	297	
2. Interaction of the Helix-Turn-Helix Motif DNA: X-Ray Crystallographic Analysis	300	
3. Interaction of the β Sheet with DNA	309	
4. Interaction of Zn-DNA Binding Domains with DNA		315
5. An Assortment of Other DNA Binding Motifs		323

CHAPTER 9

The Organization of DNA into Chromosomes

A. Introduction	326	
B. The Packaging of DNA in Bacterial Cells		328
1. Bacterial HU Protein	328	
2. DNA Supercoiling and DNA Packaging		328

3. Restrained and Unrestrained Supercoils	329
4. Are Supercoils Restrained in <i>Escherichia coli</i> ?	329
5. The HU Protein Can Restrain Supercoils <i>in Vitro</i>	331
6. HU Binds Transiently to DNA	331
7. HU Bends DNA	333
C. The Packaging of DNA in the Eukaryotic Nucleosome	333
1. The Structure of the Nucleosome	334
2. Nucleosomes and the Restraint of Supercoiling	336
3. Nucleosome Positioning	337
D. The Organization of Chromosomes in Cells	343
1. The Bacterial Nucleoid	343
2. The Organization of Chromosomes in Eukaryotic Cells	345
<i>Bibliography</i>	353
<i>Author Index</i>	387
