# Contents

Preface . . . . .	v
-------------------	---

## SECTION I OVERVIEW

<b>1. Basic Knowledge and Perspectives on Microbial Diversity and Genetics of Biodegradation of Aromatic Compounds</b>	
Masao Fukuda and Toshiaki Kudo . . . . .	1
Introduction . . . . .	1
The Biochemistry of Xenobiotic Biodegradation . . . . .	4
Microbial Ecology and Community Structure . . . . .	5
Evolutionary Mechanisms and Pathway Diversity . . . . .	6

## SECTION II THE BIOCHEMISTRY OF XENOBIOTIC BIODEGRADATION

<b>1. Hybrid Enzymes between Biphenyl/Polychlorinated Biphenyl (PCB) and Benzene/Toluene Degradative Pathway Dioxygenases</b>	
Masao Fukuda, <i>et al.</i> . . . . .	11
Introduction . . . . .	11
Hybrid Enzyme Complexes Composed of Heterologous Subunits	13
Hybrid Enzymes Generated through Homologous Recombination	14
The Decisive Amino Acid Residue for Substrate Selectivity . . .	17
The Functional Implication of the Residue 280 for Substrate Selectivity . . . . .	18
Conclusions . . . . .	19
Summary . . . . .	19
References . . . . .	19

<b>2. Multiple Metabolic Pathways Involved in Polychlorinated Biphenyl (PCB) Degradation in <i>Rhodococcus</i> sp. Strain RHA1</b>	
James E. Hauschild, <i>et al.</i> . . . . .	21
Introduction . . . . .	21
Strong PCB Degradation Activity of RHA1 . . . . .	22
Two Distinct PCB Degradation Systems in RHA1 . . . . .	23
Two Co-expressed Ring Cleavage Enzymes for PCB Degradation in RHA1 . . . . .	27
Summary . . . . .	31
References . . . . .	32
 <b>3. Biochemistry of 2,4-Dichlorophenoxyacetic Acid (2,4-D) Degradation: Evolutionary Implications</b>	
Robert P. Hausinger, <i>et al.</i> . . . . .	35
Introduction . . . . .	35
The 2,4-D Degradation Pathway in <i>R. eutropha</i> JMP134 (pJP4) . . . . .	36
Variations on a Theme: Similar Pathway in Other Microbes . . . . .	41
Evidence for Mechanistically Distinct Enzymes in a pJP4-like Pathway and for Alternative Pathways . . . . .	43
Evolutionary Origins of the pJP4 2,4-D Metabolic Pathway . . . . .	46
Summary . . . . .	48
References . . . . .	49
 <b>4. Regulation of 2,4-Dichlorophenoxyacetic Acid Degradative Operons</b>	
Alice D. Wright and Larry Snyder . . . . .	53
Introduction . . . . .	53
Study of 2,4-D Degradative Operons . . . . .	54
Regulation of Bacterial Operons . . . . .	56
Regulation of 2,4-D Degradative Operons in Strain JMP134. . . . .	56
Analysis of the <i>tfdR</i> DNA Sequence . . . . .	58
Regulation of 2,4-D Metabolizing Genes from <i>Burkholderia</i> sp. RSAC . . . . .	58
Summary . . . . .	59
References . . . . .	60

## SECTION III MICROBIAL ECOLOGY AND COMMUNITY STRUCTURE

### 1. What is the Global Pattern of Chloroaromatic Degrading Microbial Populations?

James M. Tiedje, <i>et al.</i> . . . . .	65
Introduction . . . . .	65
Study Sites . . . . .	66
Geographic Patterns of Chloroaromatic Degraders . . . . .	67
Geographic Patterns of <i>tfdA</i> Families . . . . .	70
What Are the 2,4-D Degraders in Pristine Soil? . . . . .	70
References . . . . .	74

### 2. Genome Conformation and Genetic Diversity: A Closer Look at Several Species of *Rhodococcus* Isolated from Contaminated Soils

Nancy L. Tonso . . . . .	75
Introduction . . . . .	75
Background . . . . .	75
Types of Genomes Harboring PCB Degradative Genes . . . . .	78
Genome Conformation of Several <i>Rhodococcus</i> Isolated from Contaminated Soils in Japan . . . . .	79
Summary . . . . .	80
References . . . . .	80

### 3. Experimental Studies on the Evolution of Bacteria That Degrade 2,4-Dichlorophenoxyacetic Acid

Richard E. Lenski, <i>et al.</i> . . . . .	83
General Introduction . . . . .	83
Effects of Habitat Structure . . . . .	85
Effects of Substrate Concentration . . . . .	89
Summary . . . . .	94
References . . . . .	95

<b>4. Effects of Toxic Metabolites on Dynamics and Fitness in Laboratory Populations</b>	
Michael Travisano . . . . .	97
Introduction . . . . .	97
Life History(A Model) . . . . .	98
Population Dynamics . . . . .	99
Fitness . . . . .	106
Summary . . . . .	111
References . . . . .	112
 <b>5. Isolation and Characterization of Pentachloronitrobenzene (PCNB) Degrading Bacterium, <i>Pseudomonas aeruginosa</i> Strain I-41</b>	
Katsunori Tamura, <i>et al.</i> . . . . .	113
Introduction . . . . .	113
Distribution of PCNB Degrading Bacteria. . . . .	114
Main Pathway for Microbial Degradation of PCNB in Soil . . . . .	115
Characterization of PCNB Degrading Bacterium I-41 . . . . .	116
Influence of PCNB on Soil Microorganisms . . . . .	118
Summary . . . . .	118
References . . . . .	120
 <b>6. Degradation of Aromatics and Haloaromatics by Halophilic Bacteria</b>	
Patrick Oriel, <i>et al.</i> . . . . .	123
Introduction . . . . .	123
Isolation of Halophiles from Michigan Petroleum Brine . . . . .	124
Isolation of 2,4-D-Degrading Haloalkaliphiles from Alkali Lake, Oregon . . . . .	128
Conclusions . . . . .	129
References . . . . .	129

## SECTION IV EVOLUTIONARY MECHANISMS AND PATHWAY DIVERSITY

<b>1. Isolation and Characterization of Diverse Polychlorinated Biphenyl (PCB)/Biphenyl-Degrading Gram-positive Bacteria</b>	
Toshiaki Kudo, <i>et al.</i> . . . . .	133
Introduction . . . . .	133
Isolation, Identification and Growth of PCB/Biphenyl-Degrading <i>Rhodococcus</i> sp. . . . .	134
Diversity of <i>bph</i> Gene Cluster of PCB-Degrading Rhodococci . . . . .	140
Biphenyl Degradation by <i>Paenibacillus</i> sp.: An Analysis of Two Different <i>meta</i> Pathways . . . . .	144
Summary . . . . .	144
References . . . . .	145
<b>2. The Evolution of <i>meta</i>-Cleavage Pathway for Degradation of Polychlorinated Biphenyl (PCB)/Biphenyl in Gram-negative Bacteria</b>	
Michihisa Maeda, <i>et al.</i> . . . . .	149
Introduction . . . . .	149
PCB Degradation Pathway . . . . .	150
Enrichment Screening for PCB/Biphenyl-Degrading Bacteria . . . . .	151
Characterization of Alkali-Tolerant Bacteria . . . . .	152
Characterization of Solvent-Tolerant PCB/Biphenyl-Degrading Bacteria . . . . .	155
Comparison of Solvent-Tolerance among Biphenyl/PCB or Toluene-Degrading Bacteria . . . . .	157
Analysis of PCB Degradation Profiles . . . . .	159
Gene Structure of <i>bph/tod</i> Operon . . . . .	161
Evolution of <i>bph/tod</i> Pathway . . . . .	164
Summary . . . . .	165
References . . . . .	165
<b>3. Microbial, Genomic, and Genetic Diversity within Aromatic Hydrocarbon Degrading Bacteria: A Phylogenetic Perspective</b>	
Michael S. Roberts . . . . .	169

General Introduction . . . . .	169
Structure of the <i>meta</i> -Cleavage Pathway . . . . .	176
Summary . . . . .	182
References . . . . .	183
 <b>4. Structure and Function of Biphenyl/Polychlorinated Biphenyl (PCB) Degradation Genes in a Gram-positive Bacterium <i>Rhodococcus</i> sp. RHA1</b>	
Eiji Masai, <i>et al.</i> . . . .	185
 Introduction . . . . .	185
Cloning of Biphenyl Dioxygenase ( <i>bphA</i> ), Dihydrodiol Dehydrogenase ( <i>bphB</i> ), and <i>meta</i> -Cleavage Enzyme ( <i>bphC</i> ) Genes in <i>Rhodococcus</i> sp. RHA1 . . . . .	187
Expression of <i>bphACB</i> Genes in <i>Escherichia coli</i> . . . . .	190
Expression of <i>bphACB</i> Genes in <i>Rhodococcus</i> Host . . . . .	191
Disruption of the <i>bphA1</i> Gene . . . . .	191
Cloning of the <i>meta</i> -Cleavage Pathway Genes . . . . .	192
Discussion . . . . .	193
Summary . . . . .	193
References . . . . .	194
 <b>5. Genetic Diversity of 2,4-Dichlorophenoxyacetic Acid (2,4-D) Catabolic Genes</b>	
Cindy H. Nakatsu, <i>et al.</i> . . . .	197
 Introduction . . . . .	197
Genetics of 2,4-D Degradation by <i>Alcaligenes eutrophus</i> JMP134 . . . . .	198
Other 2,4-D Degrading Bacterial Isolates . . . . .	200
Location of 2,4-D Genes . . . . .	200
Diversity in Nucleotide Sequence . . . . .	201
Diversity in Gene Order . . . . .	202
Summary . . . . .	203
References . . . . .	204
 Index . . . . .	207
