<b>1 The History of Bioelectromagnetism</b>	<b>1</b>
<i>M. Bischof</i>	
1.1 Introduction . . . . .	1
1.2 The Pre-Galvanic Period . . . . .	1
1.2.1 Electric Fish . . . . .	1
1.2.2 Electromagnetism Becomes a Science . . . . .	2
1.2.3 Vital fluids and Etheric Spirits: Early Hypotheses . . . . .	3
1.2.4 Pre-Galvanic Electro- and Magnetotherapy . . . . .	3
1.3 The Galvanic Period . . . . .	4
1.3.1 The Galvani-Volta Controversy: Does 'Animal Electricity' Exist ? . . . . .	4
1.3.2 The Therapeutic Use of Galvanism . . . . .	5
1.4 The Instrumental Era . . . . .	5
1.4.1 Electromagnetic Theory Leads to New Instruments . . . . .	5
1.4.2 Duchenne and Faradic Electrotherapy . . . . .	6
1.4.3 The Rise of Instrumental Electrophysiology . . . . .	7
1.4.4 The Classical Period: Du Bois-Reymond and the Berlin School . . . . .	7
1.4.5 Tesla, D'Arsonval and Early Twentieth Century Electrotherapy . . . . .	9
1.4.6 The Era of Modern Instrumentation . . . . .	13
1.5 The Era of Biophysics: The Rise of Modern Bioelectromagnetics . . . . .	23
<b>2 Electromagnetism and Living Systems</b>	<b>33</b>
<i>F.A. Popp</i>	
2.1 Introduction . . . . .	33

2.2	Classical Models . . . . .	38
2.2.1	Maxwell's Equations . . . . .	38
2.2.2	Classification of Bio-Electromagnetism and Electromagnetobiology	42
2.2.3	Basic Classical Understanding of Electric Properties of Living Tissues and Heat Loss . . . . .	47
2.2.4	Nonthermal Effects . . . . .	50
2.3	Fröhlich's Model and Related Topics . . . . .	61
2.4	Towards Quantum Biology . . . . .	64
2.4.1	Extraordinary Polarizability of Biological Tissue . . . . .	65
2.4.2	Extraordinary High Efficiency of Biological Activity . . . . .	65
2.4.3	Stability of Wave Propagation . . . . .	66
2.4.4	Extremely High Sensitivity of Biological Systems . . . . .	70
2.5	Some Basic Problems and Open Questions . . . . .	72
<b>3</b>	<b>Biological Effects of Weak Electromagnetic Fields</b>	<b>81</b>
	<i>C.W. Smith</i>	
3.1	Introduction . . . . .	81
3.2	Review of Literature . . . . .	83
3.3	Characteristic Response to Microwaves and Millimeter Waves . . . . .	89
3.4	Threshold Effects . . . . .	92
3.5	Cellular Basis . . . . .	97
<b>4</b>	<b>Possible Mechanisms for Biological Effects of Weak ELF Electromag- netic Fields</b>	<b>109</b>
	<i>D.T. Edmonds</i>	
4.1	Introduction . . . . .	109
4.2	Background Physics . . . . .	109
4.3	Effects of Static Magnetic Fields . . . . .	115
4.4	Effects of Time-varying Magnetic Fields . . . . .	120
4.5	Electric Field Effects . . . . .	122
4.6	Conclusion . . . . .	126

<b>5</b>	<b>The Language of Cells - Molecular Processing of Electric Signals by Cell Membranes</b>	<b>131</b>
	<i>T.Y. Tsong and C.J. Gross</i>	
5.1	Introduction . . . . .	131
5.1.1	Anisotropic Reactions in A Cell Membrane . . . . .	131
5.1.2	Vectorial Driving Force . . . . .	132
5.1.3	Signal and Language . . . . .	134
5.2	Electric Activation of Membrane ATPases . . . . .	138
5.2.1	Electric Field Induced ATP Synthesis in Energy Transducing Membranes . . . . .	138
5.2.2	AC Induced Cation Pumping by Na,K-ATPase . . . . .	139
5.3	Electroconformational Coupling Model . . . . .	141
5.3.1	Electric Field Interaction with A Transmembrane Protein . . . . .	141
5.3.2	Coupling of An Electric Potential to A Chemical Potential . . . . .	144
5.3.3	Windows for Effective Coupling . . . . .	145
5.4	Transduction of Low Level Electric Signals . . . . .	149
5.5	Generation of Electric Signals in Cells . . . . .	152
5.6	Perspective . . . . .	155
<b>6</b>	<b>Electromagnetic Fields and Biomembranes</b>	<b>159</b>
	<i>R.P. Liburdy</i>	
6.1	Signal Transduction and the Cell Membrane . . . . .	159
6.2	Studies on Erythrocytes . . . . .	160
6.2.1	Membrane Permeability and Structural Phase Transition Studies. . . . .	160
6.2.2	Protein-Shedding Studies at the Structural Phase Transition. . . . .	162
6.3	Studies on Lymphocytes . . . . .	165
6.3.1	Arrhenius Analysis of Active and Passive Transport of Sodium in Rat Spleen Lymphocytes. . . . .	168
6.3.2	Microwave Exposures Facilitate the Accumulation of Sodium in the Lymphocyte During Passive and Active Transport at $T_c$ . . . . .	168
6.3.3	Protein-Shedding Studies at the Structural Phase Transition. . . . .	171

6.4	Liposome Vesicle Studies . . . . .	174
6.4.1	Liposome Bilayer Organization and the Structural Phase Transition. . . . .	174
6.4.2	Microwave-Triggered Liposome Permeability: Phase-Transition Liposomes and the Role of Cholesterol. . . . .	175
6.4.3	Microwave-Triggered Liposome Permeability: Non-Phase-Transition Liposomes and Net Surface Charge. . . . .	181
6.4.4	Microwave-Triggered Liposome Permeability: Role of Free Radicals. . . . .	183
6.4.5	Microwave-Triggered Liposome Permeability: Membrane Fusion. . . . .	186
<b>7</b>	<b>Can Weak Magnetic Fields (or Potentials) Affect Pattern Formation?</b>	<b>195</b>
	<i>M.-W. Ho et al.</i>	
7.1	The Physical versus the Chemical Approach to Morphogenesis . . . . .	195
7.1.1	The Electrodynamical Morphogenetic Field . . . . .	196
7.2	Experimental Methods . . . . .	197
7.2.1	Methods for Generating Magnetic Fields . . . . .	197
7.2.2	Methods for Preparing and Rearing Embryos . . . . .	197
7.2.3	Methods of Exposure to Magnetic Fields . . . . .	198
7.3	Results . . . . .	199
7.3.1	Effect on Hatching Rates and Total Patterning Abnormalities . . . . .	199
7.3.2	The Categories of Pattern Abnormalities . . . . .	199
7.3.3	Different Categories of Abnormalities in DC and AC Fields . . . . .	202
7.3.4	Tor-series Abnormalities Resemble the DC-series . . . . .	204
7.4	Discussion . . . . .	204
7.4.1	The Effect of Magnetic Fields on Body Pattern . . . . .	204
7.4.2	Embryos as Possible Detectors for the Aharonov-Bohm Effect . . . . .	209
<b>8</b>	<b>Liquid Crystalline Mesophases in Living Organisms</b>	<b>213</b>
	<i>M.-W. Ho and P.T. Saunders</i>	
8.1	Liquid Crystals and Living Matter . . . . .	213
8.2	Coherence and Phase Ordering of Liquid Crystals . . . . .	214
8.2.1	The Technique . . . . .	214

8.3	The Nature and Biological Significance of the Colours . . . . .	217
8.3.1	The Colours Give Anatomical Details Noninvasively . . . . .	217
8.3.2	The Colours Are Informative of Molecular Structure and Dynamic Molecular Phase Order . . . . .	217
8.3.3	The Colours Give Information Concerning Global Coherence of the Organism . . . . .	218
8.3.4	The Colours are Correlated with the Energetic and Physiological Status of the Organism . . . . .	218
8.4	The Optical Basis of the Technique . . . . .	219
8.4.1	The Technique is Optimized for Visualizing Biological Crystals .	219
8.4.2	Mathematical Analysis in Terms of Two Superposed Crystal Plates	221
8.5	Conclusions . . . . .	223
<b>9</b>	<b>Dielectric and AC Electrodynamic Properties of Cells</b>	<b>229</b>
	<i>R. Pethig</i>	
9.1	Introduction . . . . .	229
9.2	Theoretical Background . . . . .	230
9.2.1	Dielectric Properties of a Cell: . . . . .	230
9.3	Cells in Electric Fields . . . . .	233
9.4	Dielectrophoresis and Electrorotation . . . . .	237
9.5	Travelling-Wave Effects . . . . .	243
9.6	Concluding Remarks . . . . .	245
<b>10</b>	<b>Dynamic Cell-Membrane Events Following the Application of Signal-Pulse Electric Fields</b>	<b>251</b>
	<i>J.J. Chang et al.</i>	
10.1	Introduction . . . . .	251
10.2	Materials and Methods . . . . .	252
10.2.1	Preparation of Human Erythrocyte Ghosts . . . . .	252
10.2.2	Preparation of Bone Marrow Cells . . . . .	252
10.2.3	Electropulsation and Fluorescence Measurements . . . . .	252
10.3	Results . . . . .	254

10.3.1	Dynamic Process of Electroporabilization of Human Erythrocyte Ghosts . . . . .	254
10.3.2	Effects of Ethanol and Glutaraldehyde on the Electroporabilization of $Tb^{3+}$ Loaded in Human Ghosts . . . . .	254
10.3.3	Dynamic Changes of Electroporabilizable Areas of Human Ghosts Membranes . . . . .	259
10.3.4	Dynamic Process of Electroporabilization of Bone Marrow Cell Membrane . . . . .	261
10.4	Discussion . . . . .	265
<b>11</b>	<b>On the Biological Nature of Biophotons</b>	<b>269</b>
	<i>W.-P. Mei</i>	
11.1	Introduction . . . . .	269
11.2	Principle of Measurement . . . . .	270
11.3	Nature of Biophotons . . . . .	271
11.3.1	Spontaneous and Induced Photon Emission . . . . .	271
11.3.2	Physiological Nature of Biophotons . . . . .	272
11.3.3	Coherence of Biophotons . . . . .	282
11.4	Perspectives . . . . .	283
<b>12</b>	<b>Nonsubstantial Biocommunication in Terms of Dicke's Theory</b>	<b>293</b>
	<i>F.A. Popp et al.</i>	
12.1	Introduction . . . . .	293
12.2	Materials and Methods . . . . .	294
12.3	Results . . . . .	296
12.4	Evidence of Communication . . . . .	302
12.5	Discussion . . . . .	310
<b>13</b>	<b>Estimates of Brain Activity Using Magnetic Field Tomography and Large Scale Communication within the Brain</b>	<b>319</b>
	<i>A.A. Ioannides</i>	
13.1	Introduction . . . . .	319
13.2	Brain imaging . . . . .	321

13.2.1 Bioelectromagnetism . . . . .	322
13.3 The Inverse Problem and Models of the Generators . . . . .	325
13.3.1 The Inverse Problem and Non-uniqueness . . . . .	325
13.3.2 Models of the Generators and Silent Sources. . . . .	326
13.3.3 Probabilistic Distributed Source Solutions . . . . .	327
13.3.4 Magnetic Field Tomography (MFT) . . . . .	331
13.4 MFT Estimates of Cardiac Activity . . . . .	333
13.5 Brain Signals: Variability and Averaging . . . . .	336
13.5.1 The Case for Averaging . . . . .	337
13.5.2 The Case Against Averaging . . . . .	339
13.6 MFT Analysis of Evoked Responses . . . . .	341
13.7 Oscillations, Synchrony and Spontaneous Activity . . . . .	342
13.8 Pulling the Early Threads Together . . . . .	344
13.9 Conclusion . . . . .	346
<b>14 Log-Normal Distribution of Physiological Parameters and Coherence of Biological Systems</b> . . . . .	<b>355</b>
<i>C.L. Zhang and F.A. Popp</i>	
14.1 Introduction . . . . .	355
14.2 Normal and Lognormal Distribution . . . . .	355
14.3 Organization of Possibilities . . . . .	358
14.4 Lognormal Distribution and Coherence . . . . .	361
<b>15 Electromagnetic Sensitivity of Animals and Humans: Biological and Clinical Implications</b> . . . . .	<b>365</b>
<i>U. Warnke</i>	
15.1 Examples of the Use of the Earth's Magnetic Field by Organisms . . . . .	365
15.2 Magneto-Sensibility . . . . .	367
15.3 The Magnetic Sensitivity of Certain Centers of the Brain . . . . .	369
15.4 The Key Role of Melatonin . . . . .	371
15.5 Spherics . . . . .	372

15.6 Coherent Oscillator - Triggering as a Synchronous Pulse for Neuronal Networks and Hormones . . . . .	374
15.7 Therapeutic Uses of Pulsed Electromagnetic Fields PEMFs . . . . .	375
<b>16 Fröhlich's Theory of Coherent Excitation - A Retrospective</b>	<b>387</b>
<i>T.M. Wu</i>	
16.1 Introduction . . . . .	387
16.2 Bose-Einstein Condensation in Biological Systems . . . . .	393
16.3 One- and Two-Dimensional Cases . . . . .	396
16.3.1 One-Dimensional Case . . . . .	396
16.3.2 Two-Dimensional Case . . . . .	396
16.4 Time Threshold for Biological Effects . . . . .	403
16.5 Long Range Interaction . . . . .	405
16.6 Appendix . . . . .	407
<b>17 Energy and Electron Transport in Biological Systems</b>	<b>411</b>
<i>A.S. Davydov</i>	
17.1 Energy Transfer along Alpha-helical Proteins . . . . .	411
17.1.1 Solitons and Excitons in Protein Molecules . . . . .	411
17.1.2 The Lifetime of Molecular Solitons . . . . .	414
17.1.3 A New Hypothesis of the Mechanism of Muscle Contraction . . . . .	415
17.2 Electron Transfer along Protein Molecules . . . . .	416
17.2.1 Electron Transfer by Solitons . . . . .	416
17.2.2 Electron Pairing that Generates a Bisoliton . . . . .	419
17.2.3 Solitons and the Molecular Mechanism of the Effect of Radiation of Cells . . . . .	421
17.2.4 Possible Mechanism of General Anaesthesia . . . . .	423
17.2.5 Intracellular Dynamics and Solitons . . . . .	424
17.3 Appendix . . . . .	425
17.3.1 The Generation of Solitons and Bisolitons in Electron Transfer . . . . .	425

<b>18 Bioelectrodynamics and Biocommunication - An Epilogue</b>	<b>431</b>
<i>M.-W. Ho and F.A. Popp</i>	
18.1 The Relationship between Bioelectrodynamics and Biocommunication .	431
18.2 Direct Measurements of Electrodynamical Activities - Noninvasive Technologies . . . . .	432
18.3 Bioelectrodynamical Interactions with External Fields . . . . .	433
18.4 Coherence and Biological Organization . . . . .	434
