<b>Preface</b>	<b>vii</b>
<b>1 Climatic change: ecology's big question</b>	<b>1</b>
1.1 Early environmental biogeography: from mapping plant species distributions to mapping vegetation	6
1.2 Global distributions of vegetation	10
1.3 Formation or biome interactions with climate	25
1.4 Concluding comments	29
References and notes	30
<b>2 The kaleidoscope of past vegetation patterns</b>	<b>36</b>
2.1 Vegetation in past climates: Quaternary palaeoecology	38
2.2 Challenges for environmental change studies from Quaternary palaeoecology	45
2.3 Concluding comments	51
References and notes	52
<b>3 The complication of time and space scales</b>	<b>56</b>
3.1 The ecosystem concept and scale	57
3.2 Scale and the global dynamics of carbon	61
3.3 Formulation of ecological models	66
3.4 Interactive mosaic models	72
3.5 Concluding comments	76
References and notes	77
<b>4 Meeting the climate change challenge</b>	<b>81</b>
4.1 Historical roots of the 'greenhouse warming' concept	82
4.2 Climate and vegetation: the challenge of prediction	86
4.3 What is the significance of global climate change on Earth's vegetation?	89
4.4 Mosaic landscape models	89
4.5 Homogeneous landscape models and climate change	96
4.6 Interactive global mosaic models	101
4.7 Concluding comments	106
References and notes	107

<b>5</b>	<b>Dynamic vegetation modelling using individual-based models</b>	<b>114</b>
5.1	Gap models: structure and model development	117
5.2	History of gap model development	122
5.3	Global climate change assessment applications of gap models	127
5.4	Theoretical implications for global change ecology from gap models	136
5.5	Concluding comments	140
	References and notes	141
<b>6</b>	<b>Vegetation futures and the rise of dynamic global vegetation models</b>	<b>150</b>
6.1	Including the effects of land surface attributes and dynamics in climate models	151
6.2	Dynamic global vegetation models	154
6.3	The development of dynamic global vegetation models	158
6.4	Investigating differences in dynamic global vegetation model simulations	161
6.5	Vegetation feedbacks on climate	170
6.6	Observations of recent vegetation change	171
6.7	Concluding comments	173
	References and notes	173
<b>7</b>	<b>Climate-changed futures – how different will they be?</b>	<b>180</b>
7.1	The future view from the Intergovernmental Panel on Climate Change	183
7.2	Carrying on from where the world was before now	187
7.3	Carrying on from where the world is now	193
7.4	Future realizations	197
7.5	Concluding considerations	203
	References and notes	204
<b>8</b>	<b>Climate change and global plant diversity</b>	<b>208</b>
8.1	Making future predictions of diversity	210
8.2	Getting at the mechanisms that control species diversity	214
8.3	Simulating the impact of changing climate and CO <sub>2</sub> on future diversity	218
8.4	The naturalization of invasive species	221
8.5	Concluding remarks	225
	References and notes	227
<b>9</b>	<b>Epilogue</b>	<b>232</b>
	References and notes	235
	<b>Index</b>	<b>237</b>
