CONTENTS

Preface	vii
Estimation in the extended linear model <i>F. Akdeniz</i>	1
Discrete optimization of statistical sample sizes in simulation by using the hierarchical resampling method <i>A. Andronov and M. Fioshin</i>	9
Kernel-type estimation of bivariate distribution function for associated random variables <i>C. Azevedo and P. E. Oliveira</i>	17
On local dependence function for multivariate distributions <i>I. Bairamov and S. Kotz</i>	27
The tuning constant problem in regression type models <i>J. A. Branco and M. M. Souto de Miranda</i>	45
The usefulness of uniformity in experimental design <i>K.-T. Fang and Ch.-X. Ma</i>	51
Approximation of distributions by sphere <i>M. Käärrik</i>	61
Econometric modeling of the Lithuanian economy <i>Z. Kalinauskas</i>	67
Non-null distribution of Läuter's F -statistic: A simulation study <i>T. Kollo and A.-M. Parring</i>	77
Zero-boundary Voronoi partitions <i>J. Lember</i>	87
On expected values of fourth-degree matrix products of a multinormal matrix variate <i>H. Neudecker</i>	97
A multivariate Buckley–James estimator <i>U. Pötter</i>	117

A new algorithm of the linear discriminant function using integer programming <i>S. Shinmura</i>	133
Robustification of “approximating approach” in simultaneous equations models <i>S. Staleuskaya and Yu. Kharin</i>	143
Data compression and statistical inference <i>H. Strasser</i>	151
Estimation the poverty line as a problem of multivariate statistics <i>E.-B. Tiit and E. Käärik</i>	173
Dependence structure of a multivariate distribution characterised by the correlation matrix <i>E.-M. Tiit, V. Puusepp and H.-L. Viirsalu</i>	179
Approximation of multivariate probability functions by empirical marginal distributions and dependence measures <i>E.-M. Tiit and M. Vähi</i>	187
Sampling design as a multivariate distribution <i>I. Traat</i>	195
Class of sampling designs with given marginals <i>I. Traat and A. Kukk</i>	209
A remark on the extended growth curve model <i>I. Žežula</i>	219
