

# European Shortsea Shipping

Proceedings from the  
First European Research Roundtable Conference  
on Shortsea Shipping

(26–27 November 1992, Technical University Delft,  
The Netherlands)

EDITED BY

**Professor Dr. Ir. N. Wijnolst**

*Faculty of Mechanical Engineering and Marine Technology  
Technical University Delft*

**Professor Dr. C. Peeters**

*Department of Transport Economics  
University of Antwerp, RUCA*

**Drs. P. Liebman**

*Managing Director, Theodora Tankers  
The Netherlands*

**L|L|P|**

<i>Introductory Speeches</i>	
<i>Speech of Mrs. Hanja Maij-Weggen, Minister of Transport, The Netherlands</i>	xxv
<i>Speech of Drs. J. H. G. Jacobs, Directorate-General, Shipping and Maritime Affairs</i>	xxvi
<i>Speech of A. Guinier, Secretary-General, European Community's Shipowners Associations, Brussels</i>	xxviii
<i>Key-note address by Prof. Dr. C. Peeters</i>	xxx
<i>Closing Speech (summary) by Dr. W. Blonk, European Commission, DG VII, Brussels</i>	xxxiii
<i>Policy Recommendations</i>	xxxv
1. SHORTSEA SHIPPING AND THE WORLD CARGO CARRYING FLEET—A STATISTICAL SUMMARY <i>J. Crilley, C. J. Dean</i>	
Abstract	1
Introduction	2
1. Overall perspective	3
2. The world cargo-carrying fleet—registration and ownership	5
3. Ownership of the shortsea and deepsea components of the world cargo-carrying fleet—by ship type categories	7
4. European owned shortsea and deepsea fleets	9
5. Annual ship completions and losses/scrappings	9
Appendix 1	12
Appendix 2A	13
Appendix 2B	15
Appendix 3	15
Appendix 4	17
Appendix 5	20
2. THE POTENTIAL FOR FAST SHIPS IN EUROPEAN FREIGHT TRANSPORT <i>K. Levander</i>	
Can sea transportation be fast?	22
Industry life cycle	23

	<i>Page</i>
The new shipbuilding wave	24
Technical possibilities	25
Payload and speed	26
Best solution depends on size	27
High speed hull forms	28
Monohull, Catamaran or Trimaran	28
Winter navigation	30
Cargo unit trends	31
European shipping	31
Regular daily service	33
Speed in port	34
Speed at what cost?	35
The inter-modal port	35
Are the economics feasible?	37
Future ship concepts	37
Bibliography	38
Terminology	38
3. LOGISTIC REQUIREMENTS AND SHORTSEA SHIPPING	
<i>F. N. Caspers, R. ter Brugge</i>	
Abstract	40
1. Introduction	40
2. Broken and unbroken transport chains	41
3. Logistical requirements	44
4. Possibilities for innovations in shortsea shipping	48
5. Policy and R & D recommendations	49
Policy recommendations	49
R & D recommendations	50
References	50
Bibliography	51
4. AUTOSTRADE DEL MARE <i>R. C. Bagchus, B. Kuipers</i>	
Abstract	52
Introduction	52
Government policy	53
Combined transport	53
Policy consequences in the Netherlands	55
Economic functions of goods transport	56
Transport function indicators	57
Shift from road transport to coastal shipping:	
Netherlands-Portugal	57
Consequences for consignors	59
Logistics	59
Other obstacles	61
External costs versus policy costs	61
Conclusions	63
Annex 1	63

	<i>Page</i>
Annex 2	64
Bibliography	65
5. INNOVATION IN MULTI-MODAL LOGISTICS SOLUTIONS <i>S. N. A. Wells</i>	66
Enviroliner	75
6. IMPACT OF NEW TECHNOLOGIES ON SHORTSEA SHIPPING IN GREECE <i>H. N. Psaraftis, A. D. Papanikolau</i>	
Abstract	79
1. Introduction	79
2. The Greek coastal shipping system: status quo	80
2.1 Geography	80
2.2 Fleet composition	81
2.3 Volume of traffic	83
2.4 Network design	85
2.5 Port infrastructure	86
2.6 Other system features	86
3. Future prospects	87
3.1 New institutional environment	87
3.2 New ship technologies: advanced marine vehicles	88
3.3 New transport network design and infrastructure	90
4. Conclusions and policy recommendations	91
4.1 Conclusions	91
4.2 Policy recommendations	91
5. Acknowledgments	92
References	92
7. INFORMATION SYSTEM FOR IMPROVING MARKET ACTIVITIES IN THE SHORTSEA TRADE <i>A. J. Bos,</i> <i>H. de Vos</i>	
Abstract	95
1. Introduction	95
1.1 Functioning of the shortsea trade	95
1.1.1 Segmentation	95
1.1.2 Supply and demand	96
1.2 Co-operation	96
2. Expectations	96
3. Bottlenecks and systems	97
3.1 Bottlenecks	97
3.2 Systems	98
4. Modelling the market	98
4.1 Description of the hierarchic model for decision making	98
4.2 The model	99
4.3 Explanation of results	99

	<i>Page</i>
5. Conclusions	99
5.1 General	99
5.2 Supply and demand	101
5.3 Policy recommendations	101
Appendix. The model	102
8. STATUS AND PERSPECTIVES OF TECHNOLOGICAL DEVELOPMENT IN EUROPEAN SHORTSEA SHIPPING <i>H. Linde</i>	
1. Introduction	107
2. Cargo pattern and ship typology of European shortsea shipping	109
3. Sizes of ships	112
4. Speeds of ships	114
5. Other major elements of technological performance	116
(a) Shipborne cargo gear	116
(b) Container suitability of dry-cargo ships	116
(c) Specific cargo volume capacity (stowage factors)	119
(d) Navigation on inland waterways	120
(e) Navigation in ice	121
(f) Tanker safety	122
(g) Safety of ro-ro ships	123
6. Summary/outlook	123
7. Policy recommendations	124
9. A NEW INLAND TRANSPORT SYSTEM FOR CONTAINERS BETWEEN ROTTERDAM AND ANTWERP <i>R. Groenveld, M. Adler</i>	
Abstract	125
1. Introduction	125
1.1 General	125
1.2 Methodology	126
2. Problem definition	127
3. Description of the system	128
4. The simulation model	129
4.1 Description of the model	129
4.2 Schematizations and limitations	132
4.3 Input data	132
Throughput	132
Sailing times	133
Transit times between Volkerak locks and Kreekrak locks	133
4.4 Output of the model	134
5. Simulation results	134
5.1 Number of barges and pushers in the system	135
5.2 Runs with a fixed number of barges	135
5.3 Reliability	135
5.4 Throughput capacity	136

	<i>Page</i>
5.5 Scheduled departures from the parking areas of Rotterdam and Antwerp	137
5.6 Variance and distribution of containers to be transported	138
6. Policy recommendations and conclusions	138
7. Acknowledgments	139
8. References	139
10. HYDRAULIC RESEARCH STUDIES INCREASE EFFICIENCY AT NORTH SEA PORTS <i>D. H. Cooper, N. E. Denman, F. D. R. Yell</i>	
1. Introduction	140
2. The problem—the ship access ‘window’	140
3. Methods of investigation	142
3.1 Physical models	142
3.2 Mathematical models	143
4. Description of studies	143
4.1 Lowestoft	143
Objectives of the wave studies	143
4.2 King’s Lynn	147
4.2.1 General	147
4.2.2 Sector gates	152
4.2.3 River berth	152
4.3 Grimsby	157
4.3.1 General	157
4.3.2 Extent of research studies	157
4.3.3 Hydrodynamic numerical model	160
4.3.4 Cohesive sediment model	161
4.3.5 Discussion	163
4.4 Hull	163
4.4.1 General	163
4.4.2 Extent of research studies	164
4.4.3 Coarse grid model	166
4.4.4 Fine grid model	166
4.4.5 Model results	167
5. General guidelines to good port design and management	170
6. Conclusions	171
7. References	171

19. FERRY TRANSPORT IN THE SOUTHERN BALTIC SEA AND ITS PROSPECTS <i>K. H. Breitzman</i>	
Abstract	279
1. Towards an economic Baltic region	279
2. Baltic ferry traffic and its determining factors	282
3. Port competition in ferry traffic	285
20. SHORTSEA SHIPPING IN EUROPE AND THE AMERICAS: STATUS AND PROSPECTS <i>B. Dibner</i>	
Abstract	289
Shortsea shipping in a new world order	289
Implications of regional economic communities on shortsea shipping	290
Rationalization	291
Consumer trade growth	291
World class distribution standards and cost structures	291

	<i>Page</i>
Increasing modal competition	292
Globalisation of competition	292
European shortsea shipping from an American perspective	293
A favourable geography and network	293
Market mechanisms	294
Technological innovation in self-propelled shipping	294
Vital aftermarkets	295
American shortsea shipping from an American perspective	295
The domestic trade	295
The international shortsea trade	296
State of technology in the U.S. shortsea fleet	297
Observations and recommendations based upon comparison of the	
North American and European shortsea industries	298
1. The European shortsea industry possesses more strategic advantages than its North American counterparts	298
2. North American shortsea shipping companies must make major adjustments in the strategies and tactics if they are to participate in the shortsea opportunities within their region	298
3. The primary difference between European and American cabotage law stems from the American build provision	298
4. Expansion of a regional economy under free trade tends to reduce the number and complexity of trade patterns and to increase average sizes of cargo carried	298
5. European ship operations and technologies will continue to be a more preferable model for merchant marine development than the American model of tug barge development. European regulatory structures must support this by remaining in concordance with world standards. The U.S. model proves that separate rational regulation is a major obstacle to national competitiveness	299
6. Governments should not provide financial assistance to shipowners or shipbuilders because intervention prevents national business development and is ultimately destructive	299
7. The integration of ship ownership, ship operations, shipbuilding, ship repair and marine technology development is a vital element of successful long term market evolution	300
8. Limited participation by private fleets in shortsea shipping is a valuable indicator of its capability and competitiveness	300
9. Massive consolidation of the industry is likely	300
21. THE ECONOMIC STRUCTURE OF GREEK PASSENGER COASTAL SHIPPING <i>A. M. Goulielmos, M. Lekakos</i>	
1. Abstract	301
2. The supply side in GPCS	301
2.1 The costs for providing the services in GPCS	304
3. The demand side in GPCS	304
3.1 The problem of peak season demand in GPCS	306

	<i>Page</i>
4. Price war in pre-1950s GPCS	306
5. Analysis of the present legal framework for GPCS (1990–1991)	307
6. The informal cartel that was formed in 1976 in GPCS	309
6.1 Introduction	309
6.2 Certificate of state approval that investment is feasible	309
6.3 Rate hearings in the Advisory Committee	310
7. Investment behaviour in GPCS	312
8. Quality of service in GPCS	313
9. Policy recommendations	314
References	315
22. ASSESSMENT OF LAND/SEA FEEDER TRAFFIC FLOWS IN EUROPE <i>M. Zachcial</i>	
1. Abstract	316
2. Feeder shipping services	316
2.1 Major routes and trading areas	316
2.2 Growth tendencies	317
2.3 Ports	317
2.4 Operating conceptions and alternatives	318
3. Competition of land feeder services	318
3.1 Assessment of land feeder traffic volumes between Scandinavia and North Range ports	318
3.2 Assessment of sea feeder traffic volumes between Scandinavia and German ports	319
4. Potentials for further sea feeder traffic	320
23. COASTAL AND SHORTSEA SHIPPING IN SWEDEN: A PRELIMINARY STUDY <i>A. Sjöbris</i>	
Preface	328
Summary of the pre-study	329
Collecting and distributing	330
The terminals	330
The vessel	330
Booking and cargo control system	331
Environmental effects	331
Result and conclusions	331
The progress of the study	331
24. THE DEMAND FOR SEA TRANSPORT IN SMALLER SEA PORTS: AN APPLICATION TO THE PORT OF BRUSSELS <i>B. Dewulf, H. Meersman, E. van de Voorde</i>	
Problem	333
1. Technical characteristics	333
2. Sea transport in the port of Brussels	334
2.1 Statistical outline of sea transport in Brussels	336

	<i>Page</i>
2.2 Model specification and empirical results	338
2.2.1 Incoming sea transport	338
2.2.2 Outgoing sea transport	342
Conclusion	343
Bibliography	344
25. FACILITATION OF SHORTSEA SHIPPING: IMPROVEMENT IN THE SEA/LAND INTERFACE (THE DUTCH CASE) <i>J. Hoogerbeets, P. Melissen</i>	
1. Background	346
2. Objectives	346
3. The role of shortsea shipping	347
4. Identification of bottlenecks	348
5. What next?	349
Summary and conclusions	350
26. THE IMPACT OF POLITICAL AND ECONOMIC CHANGE ON POLISH SHORTSEA SHIPPING <i>Z. Sawiczewska</i>	
1. Introduction	351
2. Privatisation of the Polish maritime economy	353
3. Polish shortsea shipping industry—trends and perspectives	355
Conclusions	359
References	360
27. RECENT DEVELOPMENTS IN FEEDER TRANSPORT BY COASTERS <i>C. Cheetham, P. Hornby, R. Papenhuijzen</i>	
1. Introduction	364
2. Maritime transport systems in Europe	364
Ferries	364
Coaster traffic	365
Inland water traffic	365
3. The world of the river-sea vessel	366
4. Transport needs—expected changes	367
5. Problems and changes	367
5.1 Infrastructure	367
5.2 Identifying new patterns of trade for the economic future	368
5.3 Energy consumption	369
5.4 Economic consideration	369
6. The Permanent International Association of Navigation Congresses	370
7. Innovations in complete door to door concepts—examples	370
Steel from Duisburg to Goole	371
Steel from Flixborough to the Rhine	371
Steel coils from Mostyn to Gennevilliers, Paris	371
China clay from Fowey to Lixhe on the Albert Canal	371
The journey of the Sormovskiy 45	372
Containers from Boston to Duisburg direct—R.M.S. service	372
Sawn timber from the Saimaa Lake areas	372

	<i>Page</i>
8. Infrastructure	373
9. New ship types for river-sea work	374
River-sea feeder container vessels	374
The Type 212 design	374
Sea Orade—no propeller, just pump jets	374
The Kruiplijn tanker	375
Other shortsea and river tankers	375
The split-ship design from M.D.I. Chichester, U.K.	376
10. Prospects	377
11. Conclusion	377
28. GENERATING LOGISTICAL CHAINS SCENARIOS FOR MARITIME POLICYMAKERS <i>L. Kondratowicz</i>	
1. The challenge	379
2. Justification for new modelling approach	379
3. Premises and the goal	380
4. Historic background of the research	380
5. Main features of Multimod	381
6. Organisation of the Multimod system	382
6.1 Multimod simulation modelling system	382
6.2 Multimod simulation execution system	383
6.3 Multimod simulation analysis system	383
7. Example models and simulations	384
7.1 Repositioning of containers	384
Multimod System—(Release 2.11)	385
Model structure	385
Simulation process parameters	385
Multimod System (Release 2.11)	387
Results of simulation run #1	387
Repositioning of containers	387
7.2 North European alternative transport systems	390
Multimod System—(Release 2.8)	392
Model structure	392
Simulation process parameters	392
Multimod System (Release 2.11)	395
Results of simulation run #2	395
North European transport system. Part B/R	395
Multimod System (Release 2.11)	398
Results of simulation run #7	398
North European transport system. Part B/R	398
