SOIL~PLANT RELATIONSHIPS

An Ecological Approach

DAVID W. JEFFREY

CROOM HELM
London & Sydney

TIMBER PRESS
Portland, Oregon

Contents

	Preface	vii
	Part I: A plant-centred biological complex	1
1	Plants, roots and ion absorption	3
2	Mineral composition of plant tissues and the function of ions	18
3	Plants and water	50
4	Symbiotic and other associations for nutrient capture	63
5	Herbivores, decomposers and other soil organisms	82
6	Vegetation and fire	91
	Part II: Environmental complexes	95
7	Soil formation	97
8	Soil matrix and soil water	109
9	Soil atmosphere and soil temperature	129
10	Some examples of mineral nutrient supply	136
11	Measuring availability of nutrients and toxic ions	150
12	Experimental approaches to the study of soil variables	161
	Part III: Interactions in the real world. Some case histories	173
13	The autecology of two contrasting species	175
14	Restoration of derelict land	185
15	Two aspects of forest mineral-nutrient economy	202
16	Australian heathlands and other nutrient-poor terrestrial ecosystems	211
17	Three aspects of the Alaskan Arctic tundra complex	224
18	Saltmarshes and the coastal zone	235

19 Calcareous and serpentine soils and their vegetation 257
