

Markets for Carbon and Power Pricing in Europe

Contents

<i>List of contributors</i>	vii
1 Introduction <i>Francesco Gulli</i>	1
PART I OVERVIEW AND THEORETICAL ISSUES	
2 The European Emissions Trading Scheme: overview, lessons and perspectives <i>Liliya Chernyavs'ka</i>	13
3 Modelling the short-run impact of 'carbon trading' on the electricity sector <i>Francesco Gulli</i>	36
4 From electricity prices to electricity costs: impact of emissions trading on industry's electricity purchasing strategies <i>Julia Reinaud</i>	80
PART II EMPIRICAL ANALYSES	
5 Options to address concerns regarding EU ETS-induced increases in power prices and generators' profits: the case of carbon cost pass-through in Germany and the Netherlands <i>Jos Sijm, Sebastiaan Hers and Bas Wetzelaer</i>	101
6 A vector error correction model of the interactions among gas, electricity and carbon prices: an application to the cases of Germany and the United Kingdom <i>Derek W. Bunn and Carlo Fezzi</i>	145
7 Impacts of the European Emissions Trading Scheme on Finnish wholesale electricity prices <i>Juha Honkatukia, Ville Mälikönen and Adriaan Perrels</i>	160
8 The impact of the European Emissions Trading Scheme on power prices in Italy: the 'load duration curve approach' <i>Liliya Chernyavs'ka and Francesco Gulli</i>	193

9	The joint impact of carbon emissions trading and tradable green certificates on the evolution of liberalized electricity markets: the Spanish case <i>Pedro Linares and Francisco J. Santos</i>	213
