# **Life Cycle Investing and Occupational Old-Age Provision in Switzerland**

**GABLER EDITION WISSENSCHAFT**

# Contents

<b>List of Figures</b>	<b>XV</b>
<b>List of Tables</b>	<b>XVII</b>
<b>Abbreviations</b>	<b>XIX</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Objectives . . . . .	3
1.2 Contents and structure . . . . .	4
<b>2 Institutional framework, motivation and objectives</b>	<b>7</b>
2.1 Retirement provision in Switzerland . . . . .	7
2.1.1 Overview . . . . .	8
2.1.2 The first pillar (AHV) . . . . .	9
2.1.2.1 Contribution phase . . . . .	9
2.1.2.2 Withdrawal phase . . . . .	9
2.1.2.3 Funding . . . . .	13
2.1.2.4 Organisation and enforcement . . . . .	13
2.1.3 The second pillar (BVG) . . . . .	14
2.1.3.1 Participation and coverage . . . . .	14
2.1.3.2 Contribution phase . . . . .	15
2.1.3.3 Withdrawal phase . . . . .	19

2.1.3.4	Organisation and enforcement . . . . .	20
2.1.3.4.1	Portability and vesting . . . . .	20
2.1.3.4.2	Types of pension funds . . . . .	21
2.1.3.4.3	Pension fund governance . . . . .	23
2.1.3.4.4	Guarantee mechanism . . . . .	24
2.1.4	The third pillar . . . . .	25
2.1.4.1	Contribution phase . . . . .	25
2.1.4.2	Withdrawal phase . . . . .	26
2.1.5	Integration of pillars and example . . . . .	26
2.1.5.1	Analytic characterization of replacement rates . . . . .	28
2.1.5.2	Simulated replacement rates . . . . .	30
2.2	Problem derivation . . . . .	33
2.2.1	Economic shortcomings of second pillar regulation . . . . .	33
2.2.2	Prior reform activity . . . . .	37
2.2.3	Individualization of the second pillar . . . . .	39
2.2.3.1	Definition and dimensions of individualization . . . . .	39
2.2.3.2	Existing individualization proposals . . . . .	41
2.2.3.3	Opposition against second pillar individualization . . . . .	44
2.2.3.4	Resumé of individualization debate . . . . .	47
2.3	Objectives of present work . . . . .	48
<b>3</b>	<b>Methodology: state-of-the-art</b>	<b>51</b>
3.1	Dynamic models of portfolio choice . . . . .	52
3.2	Life cycle models of portfolio choice . . . . .	55
3.2.1	A basic model of life cycle portfolio decisions . . . . .	56
3.2.1.1	The investor's objective function . . . . .	56
3.2.1.2	Labor and retirement income . . . . .	57

3.2.1.3	Saving accounts and asset allocation . . . . .	58
3.2.1.4	Optimization . . . . .	58
3.2.1.5	Characteristic results . . . . .	60
3.2.1.6	Portfolio Puzzles . . . . .	63
3.2.2	Modifications and extensions . . . . .	66
3.2.2.1	Overview . . . . .	66
3.2.2.2	Retirement savings account . . . . .	68
3.2.2.3	Realistic borrowing regimes . . . . .	68
3.2.2.4	Alternative preference structures . . . . .	70
3.2.2.4.1	Models with habit formation utility . . . . .	70
3.2.2.4.2	Models with recursive preferences and preference heterogeneity . . . . .	72
3.2.2.5	Endogenizing human capital . . . . .	74
3.2.2.6	Endogenizing housing . . . . .	75
3.2.2.7	Different labor income and stock return dynamics . . . . .	78
3.3	Conclusions . . . . .	81
<b>4</b>	<b>Methodology: computational aspects</b>	<b>85</b>
4.1	Statement of problem . . . . .	86
4.1.1	Sequential representation . . . . .	86
4.1.2	Recursive representation . . . . .	86
4.2	Solution approaches . . . . .	87
4.2.1	Overview . . . . .	88
4.2.2	Solution by backward induction . . . . .	90
4.3	Solution ingredients . . . . .	92
4.3.1	Reduction of state space dimensionality by standardization . . . . .	93
4.3.2	Discretization of the endogenous state space . . . . .	94
4.3.3	Value function interpolation and extrapolation . . . . .	96

4.3.4 Discretization of the exogenous state space . . . . .	97
4.3.4.1 Numerical integration routines and their applicability to the model of Cocco et al. (2005) . . . . .	98
4.3.4.2 Specific numerical integration routines for economic problems .	99
4.3.4.2.1 The method of Tauchen (1986) . . . . .	100
4.3.4.2.2 The method of Tauchen/Hussey (1991) . . . . .	101
4.3.4.2.3 Application of the method of Tauchen/Hussey (1991) to a common exogenous law of motion . . . . .	103
4.3.4.3 Application of the method of Tauchen/Hussey (1991) to the model of Cocco et al. (2005) . . . . .	104
4.3.5 Constrained non linear optimization . . . . .	106
4.4 Algorithms to solve life cycle models of portfolio choice . . . . .	107
4.4.1 Sequential algorithms . . . . .	108
4.4.1.1 The <i>Mathematica</i> algorithm by Carroll . . . . .	108
4.4.1.2 Our <i>Mathematica</i> algorithm . . . . .	110
4.4.1.2.1 Implementation of the method by Tauchen/Hussey (1991) . . . . .	110
4.4.1.2.2 Numerical evaluation of the objective function . . . . .	111
4.4.1.2.3 Algorithm . . . . .	112
4.4.2 Parallel algorithms . . . . .	114
4.4.2.1 The ‘curse of dimensionality’ . . . . .	114
4.4.2.2 Methods to overcome the curse of dimensionality . . . . .	115
4.4.2.3 Practical implementation of a parallel algorithm . . . . .	116
4.4.2.3.1 Prerequisites and program architecture . . . . .	117
4.4.2.3.2 Design and organisation of algorithm . . . . .	118
4.5 Conclusions . . . . .	120
<b>5 Empirical analysis of Swiss labor income dynamics</b>	<b>123</b>

5.1	Related literature . . . . .	124
5.2	Empirical model and estimation method . . . . .	127
5.2.1	First stage estimation . . . . .	128
5.2.2	Second stage estimation . . . . .	129
5.2.2.1	Projection methodology . . . . .	129
5.2.2.2	Covariance restriction methodology . . . . .	130
5.2.2.3	Appreciation and choice of estimator . . . . .	132
5.3	Data . . . . .	133
5.3.1	Data source and type . . . . .	133
5.3.2	Choice of variables and preliminary data manipulation . . . . .	135
5.3.3	Selection biases . . . . .	135
5.3.3.1	Labor market participation bias . . . . .	135
5.3.3.2	Other selectivity biases . . . . .	138
5.3.4	Sample classification . . . . .	138
5.3.5	Missing values in maximum likelihood estimations . . . . .	140
5.3.5.1	Balancing operation . . . . .	141
5.3.5.2	Missingness patterns and severity of missing-value problem .	143
5.3.5.3	Missing value treatment . . . . .	146
5.3.6	Descriptive data analysis . . . . .	154
5.4	Results . . . . .	158
5.4.1	Life cycle labor income trajectories . . . . .	158
5.4.2	Covariance structure . . . . .	161
5.4.2.1	Parttime and fulltime workers . . . . .	161
5.4.2.2	Fulltime workers only . . . . .	166
5.5	Conclusions . . . . .	170
6	Illustration of life cycle portfolio choice for stylized Swiss investors	173

---

6.1	Derivation of stylized Swiss investor groups from empirical earnings processes . . . . .	174
6.1.1	Individuals as investors . . . . .	174
6.1.2	Empirical support for stylized single investor groups and necessity to consider stylized couple investors . . . . .	176
6.1.3	Couples as investors . . . . .	179
6.2	Calibration of remaining parameters using Swiss data . . . . .	181
6.2.1	Return processes of financial assets . . . . .	181
6.2.2	Conditional survival probabilities . . . . .	181
6.2.3	Replacement rates . . . . .	182
6.2.3.1	Benchmark case . . . . .	183
6.2.3.2	Scenario analysis . . . . .	184
6.2.4	Correlation between labor income and equity return shocks . . . . .	185
6.3	Computational results . . . . .	186
6.3.1	Baseline results . . . . .	186
6.3.1.1	Individuals as investors . . . . .	186
6.3.1.2	Couples as investors . . . . .	192
6.3.2	Additional scenario analyses . . . . .	194
6.3.2.1	Replacement rates . . . . .	194
6.3.2.2	Correlated labor income- and equity return shocks . . . . .	195
6.4	Conclusions . . . . .	197
<b>7</b>	<b>Welfare analysis</b>	<b>199</b>
7.1	Economic model . . . . .	200
7.1.1	Preferences . . . . .	200
7.1.2	Labor income . . . . .	201
7.1.3	Financial assets . . . . .	202
7.1.4	Retirement provision system . . . . .	203
7.1.4.1	AHV . . . . .	203

---

7.1.4.2	BV . . . . .	204
7.1.4.2.1	Status-Quo economy . . . . .	204
7.1.4.2.2	Flexibilized economy . . . . .	205
7.1.5	Summary of employee problem . . . . .	206
7.2	Assessment of proposed model . . . . .	207
7.2.1	Discussion and implications of modelling choices . . . . .	207
7.2.1.1	BVG treatment . . . . .	207
7.2.1.2	AHV treatment . . . . .	209
7.2.1.3	Taxation . . . . .	209
7.2.2	Intuition on main model mechanisms . . . . .	210
7.2.2.1	All channels off . . . . .	211
7.2.2.2	Effects of the <i>Tax Channel</i> . . . . .	212
7.2.2.2.1	Isolated effects of EET vs. TTE taxation . . . . .	212
7.2.2.2.2	Additional effects of taxation differences between asset classes . . . . .	213
7.2.2.3	Effects of the <i>Return Channel</i> . . . . .	215
7.2.2.3.1	Difference in expected risky asset excess returns . . . . .	216
7.2.2.3.2	Difference in risky asset return volatilities . . . . .	217
7.2.2.4	Effects of the <i>Illiteracy Channel</i> . . . . .	217
7.3	Calibration, simulation and welfare metrics . . . . .	219
7.3.1	Investor life and preferences . . . . .	220
7.3.2	Labor income processes and variances . . . . .	220
7.3.3	Financial assets . . . . .	220
7.3.4	AHV . . . . .	226
7.3.5	BV . . . . .	226
7.3.5.1	Status-Quo economy . . . . .	226
7.3.5.2	Flexibilized economy . . . . .	227

---

7.3.6	Preliminary simulation and calibration of state and control spaces . . . . .	227
7.3.7	Forward simulation . . . . .	228
7.3.8	Welfare metrics . . . . .	228
7.4	Results . . . . .	229
7.4.1	Baseline results . . . . .	230
7.4.1.1	Optimal behavior and policy functions . . . . .	230
7.4.1.1.1	Status-Quo economy . . . . .	230
7.4.1.1.2	Flexibilized economy . . . . .	234
7.4.1.2	Simulations . . . . .	237
7.4.1.3	Welfare implications . . . . .	241
7.4.2	Additional analyses . . . . .	246
7.4.2.1	Set of contribution rate choices . . . . .	246
7.4.2.2	Contribution rate and employer matching scheme in <i>SQ</i> economy . . . . .	247
7.4.2.3	BVG conversion factor . . . . .	247
8	Conclusions	249
