Preface	v
1 Life annuities	1
1.1 Introduction	1
1.2 Annuities-certain versus life annuities	2
1.2.1 Withdrawing from a fund	2
1.2.2 Avoiding early fund exhaustion	5
1.2.3 Risks in annuities-certain and in life annuities	6
1.3 Evaluating life annuities: deterministic approach	8
1.3.1 The life annuity as a financial transaction	8
1.3.2 Actuarial values	9
1.3.3 Technical bases	12
1.4 Cross-subsidy in life annuities	14
1.4.1 Mutuality	14
1.4.2 Solidarity	16
1.4.3 'Tontine' annuities	18
1.5 Evaluating life annuities: stochastic approach	20
1.5.1 The random present value of a life annuity	20
1.5.2 Focussing on portfolio results	21
1.5.3 A first insight into risk and solvency	24
1.5.4 Allowing for uncertainty in mortality assumptions	27
1.6 Types of life annuities	31
1.6.1 Immediate annuities versus deferred annuities	31
1.6.2 The accumulation period	33
1.6.3 The decumulation period	36
1.6.4 The payment profile	38
1.6.5 About annuity rates	40
1.6.6 Variable annuities and GMxB.features	41
1.7 References and suggestions for further reading	43

---

2	The basic mortality model	45
2.1	Introduction	45
2.2	Life tables	46
2.2.1	Cohort tables and period tables	46
2.2.2	'Population' tables versus 'market' tables	47
2.2.3	The life table as a probabilistic model	48
2.2.4	Select mortality	49
2.3	Moving to an age-continuous context	51
2.3.1	The survival function	51
2.3.2	Other related functions	53
2.3.3	The force of mortality	55
2.3.4	The central death rate	57
2.3.5	Assumptions for non-integer ages	57
2.4	Summarizing the lifetime probability distribution	58
2.4.1	The life expectancy	59
2.4.2	Other markers	60
2.4.3	Markers under a dynamic perspective	62
2.5	Mortality laws	63
2.5.1	Laws for the force of mortality	64
2.5.2	Laws for the annual probability of death	66
2.5.3	Mortality by causes	67
2.6	Non-parametric graduation	67
2.6.1	Some preliminary ideas	67
2.6.2	The Whittaker–Henderson model	68
2.6.3	Splines	69
2.7	Some transforms of the survival function	73
2.8	Mortality at very old ages	74
2.8.1	Some preliminary ideas	74
2.8.2	Models for mortality at highest ages	75
2.9	Heterogeneity in mortality models	77
2.9.1	Observable heterogeneity factors	77
2.9.2	Models for differential mortality	78
2.9.3	Unobservable heterogeneity factors. The frailty	80
2.9.4	Frailty models	83
2.9.5	Combining mortality laws with frailty models	85
2.10	References and suggestions for further reading	87

---

3	Mortality trends during the 20th century	89
3.1	Introduction	89
3.2	Data sources	90
3.2.1	Statistics Belgium	91
3.2.2	Federal Planning Bureau	91
3.2.3	Human mortality database	92
3.2.4	Banking, Finance, and Insurance Commission	92
3.3	Mortality trends in the general population	93
3.3.1	Age-period life tables	93
3.3.2	Exposure-to-risk	95
3.3.3	Death rates	96
3.3.4	Mortality surfaces	101
3.3.5	Closure of life tables	101
3.3.6	Rectangularization and expansion	105
3.3.7	Life expectancies	111
3.3.8	Variability	113
3.3.9	Heterogeneity	115
3.4	Life insurance market	116
3.4.1	Observed death rates	116
3.4.2	Smoothed death rates	118
3.4.3	Life expectancies	122
3.4.4	Relational models	123
3.4.5	Age shifts	127
3.5	Mortality trends throughout EU	129
3.6	Conclusions	135
4	Forecasting mortality: an introduction	137
4.1	Introduction	137
4.2	A dynamic approach to mortality modelling	139
4.2.1	Representing mortality dynamics: single-figures versus age-specific functions	139
4.2.2	A discrete, age-specific setting	140
4.3	Projection by extrapolation of annual probabilities of death	141
4.3.1	Some preliminary ideas	141
4.3.2	Reduction factors	144

---

4.3.3	The exponential formula	145
4.3.4	An alternative approach to the exponential extrapolation	146
4.3.5	Generalizing the exponential formula	147
4.3.6	Implementing the exponential formula	148
4.3.7	A general exponential formula	149
4.3.8	Some exponential formulae used in actuarial practice	149
4.3.9	Other projection formulae	151
4.4	Using a projected table	152
4.4.1	The cohort tables in a projected table	152
4.4.2	From a double-entry to a single-entry projected table	153
4.4.3	Age shifting	155
4.5	Projecting mortality in a parametric context	156
4.5.1	Mortality laws and projections	156
4.5.2	Expressing mortality trends via Weibull's parameters	160
4.5.3	Some remarks	162
4.5.4	Mortality graduation over age and time	163
4.6	Other approaches to mortality projections	165
4.6.1	Interpolation versus extrapolation: the limit table	165
4.6.2	Model tables	166
4.6.3	Projecting transforms of life table functions	167
4.7	The Lee–Carter method: an introduction	169
4.7.1	Some preliminary ideas	169
4.7.2	The LC model	171
4.7.3	From LC to the Poisson log-bilinear model	172
4.7.4	The LC method and model tables	173
4.8	Further issues	173
4.8.1	Cohort approach versus period approach. APC models	173
4.8.2	Projections and scenarios. Mortality by causes	175
4.9	References and suggestions for further reading	175
4.9.1	Landmarks in mortality projections	175
4.9.2	Further references	178

---

5 Forecasting mortality: applications and examples of age-period models	181
5.1 Introduction	181
5.2 Lee–Carter mortality projection model	186
5.2.1 Specification	186
5.2.2 Calibration	188
5.2.3 Application to Belgian mortality statistics	200
5.3 Cairns–Blake–Dowd mortality projection model	203
5.3.1 Specification	203
5.3.2 Calibration	206
5.3.3 Application to Belgian mortality statistics	207
5.4 Smoothing	209
5.4.1 Motivation	209
5.4.2 P-splines approach	210
5.4.3 Smoothing in the Lee–Carter model	212
5.4.4 Application to Belgian mortality statistics	213
5.5 Selection of an optimal calibration period	214
5.5.1 Motivation	214
5.5.2 Selection procedure	216
5.5.3 Application to Belgian mortality statistics	217
5.6 Analysis of residuals	218
5.6.1 Deviance and Pearson residuals	218
5.6.2 Application to Belgian mortality statistics	220
5.7 Mortality projection	221
5.7.1 Time series modelling for the time indices	221
5.7.2 Modelling of the Lee–Carter time index	223
5.7.3 Modelling the Cairns–Blake–Dowd time indices	228
5.8 Prediction intervals	229
5.8.1 Why bootstrapping?	229
5.8.2 Bootstrap percentiles confidence intervals	230
5.8.3 Application to Belgian mortality statistics	232
5.9 Forecasting life expectancies	234
5.9.1 Official projections performed by the Belgian Federal Planning Bureau (FPB)	235
5.9.2 Andreev–Vaupel projections	235
5.9.3 Application to Belgian mortality statistics	237

---

5.9.4 Longevity fan charts	240
5.9.5 Back testing	240
<hr/>	
6 Forecasting mortality: applications and examples of age-period-cohort models	243
<hr/>	
6.1 Introduction	243
6.2 LC age-period-cohort mortality projection model	246
6.2.1 Model structure	246
6.2.2 Error structure and model fitting	248
6.2.3 Mortality rate projections	253
6.2.4 Discussion	253
6.3 Application to United Kingdom mortality data	254
6.4 Cairns-Blake-Dowd mortality projection model: allowing for cohort effects	263
6.5 P-splines model: allowing for cohort effects	265
<hr/>	
7 The longevity risk: actuarial perspectives	267
<hr/>	
7.1 Introduction	267
7.2 The longevity risk	268
7.2.1 Mortality risks	268
7.2.2 Representing longevity risk: stochastic modelling issues	270
7.2.3 Representing longevity risk: some examples	273
7.2.4 Measuring longevity risk in a static framework	276
7.3 Managing the longevity risk	293
7.3.1 A risk management perspective	293
7.3.2 Natural hedging	299
7.3.3 Solvency issues	303
7.3.4 Reinsurance arrangements	318
7.4 Alternative risk transfers	330
7.4.1 Life insurance securitization	330
7.4.2 Mortality-linked securities	332
7.4.3 Hedging life annuity liabilities through longevity bonds	337
7.5 Life annuities and longevity risk	343
7.5.1 The location of mortality risks in traditional life annuity products	343
7.5.2 GAO and GAR	346
7.5.3 Adding flexibility to GAR products	347

---

7.6	Allowing for longevity risk in pricing	350
7.7	Financing post-retirement income	354
7.7.1	Comparing life annuity prices	354
7.7.2	Life annuities versus income drawdown	356
7.7.3	The 'mortality drag'	359
7.7.4	Flexibility in financing post-retirement income	363
7.8	References and suggestions for further reading	369
