Contents

Preface	xi
Acknowledgments	xiii
Notation	xv
List of Models	xix
1 An Introduction to the GAMS Modeling System	1
1.1 Preview	1
1.2 Basics of Modeling	1
1.3 The GAMS Language	2
1.3.1 Lexical conventions	3
1.3.2 Sets	4
1.3.3 Expressions, functions, and operators	6
1.3.4 Assignment statements	11
1.3.5 Variable declarations	12
1.3.6 Constraints: Equation declarations	13
1.3.7 Model declarations	14
1.3.8 The SOLVE statement and model types	15
1.3.9 Control structures	16
1.3.10 Conditional compilation	20
1.4 Getting Started	21
1.4.1 The Integrated Development Environment	21
1.4.2 Command line interaction	22
1.4.3 The model library	22
Notes and References	22
2 Data Management	25
2.1 Preview	25
2.2 Basics of Data Handling	25
2.2.1 Data entry: SCALARS, PARAMETERS, and TABLES	26
2.2.2 External data files: INCLUDE	28
2.2.3 Output: DISPLAY and PUT	29
2.3 Data Generation	31
2.4 A Complete Example: Portfolio Dedication	31
2.4.1 The source file	32
2.4.2 The FINLIB files	39

3	Mean-Variance Portfolio Optimization	41
3.1	Preview	41
3.2	Basics of Mean-Variance Models	42
3.2.1	Data estimation for the mean-variance model	46
3.2.2	Allowing short sales	48
3.2.3	The FINLIB files	49
3.3	Sharpe Ratio Model	50
3.3.1	Risk-free borrowing	51
3.3.2	The FINLIB files	53
3.4	Diversification Limits and Transaction Costs	53
3.4.1	Transaction costs	54
3.4.2	Portfolio revision	56
3.4.3	The FINLIB files	57
3.5	International Portfolio Management	57
3.5.1	Implementation with dynamic sets	58
3.5.2	The FINLIB files	61
4	Portfolio Models for Fixed Income	63
4.1	Preview	63
4.2	Basics of Fixed-Income Modeling	64
4.2.1	Modeling time	64
4.2.2	GAMS as a financial calculator: continuous time	66
4.2.3	Bootstrapping the term structure of interest rates	68
4.2.4	Considerations for realistic modeling	73
4.2.5	The FINLIB files	74
4.3	Dedication Models	74
4.3.1	Horizon return model	78
4.3.2	Tradeability considerations	79
4.3.3	The FINLIB files	82
4.4	Immunization Models	83
4.4.1	The FINLIB files	85
4.5	Factor Immunization Model	85
4.5.1	Direct yield maximization	87
4.5.2	The FINLIB files	89
4.6	Factor Immunization for Corporate Bonds	89
4.6.1	The model data sets	89
4.6.2	The optimization models	90
4.6.3	The FINLIB files	94
5	Scenario Optimization	95
5.1	Preview	95
5.2	Data sets	96
5.2.1	The FINLIB files	97
5.3	Mean Absolute Deviation Models	97
5.3.1	Downside risk and tracking models	99
5.3.2	Comparing mean-variance and mean absolute deviation	101
5.3.3	The FINLIB files	103

5.4	Regret Models	104
5.4.1	The FINLIB files	106
5.5	Conditional Value-at-Risk Models	106
5.5.1	The FINLIB files	108
5.6	Utility Maximization Models	109
5.6.1	The FINLIB files	111
5.7	Put/Call Efficient Frontier Models	111
5.7.1	The FINLIB files	117
6	Dynamic Portfolio Optimization with Stochastic Programming	119
6.1	Preview	119
6.2	Dynamic Optimization for Fixed-Income Securities	119
6.2.1	Stochastic dedication	120
6.2.2	Stochastic dedication with borrowing and lending	122
6.2.3	The FINLIB files	124
6.3	Formulating Two-Stage Stochastic Programs	124
6.3.1	Deterministic and stochastic two-stage programs	125
6.3.2	The FINLIB files	128
6.4	Single Premium Deferred Annuities: A Multi-stage Stochastic Program . .	128
6.4.1	Background and data	128
6.4.2	The FINLIB files	133
7	Index Funds	137
7.1	Preview	137
7.2	Models for Index Funds	138
7.2.1	A structural model for index funds	138
7.2.2	A co-movement model for index funds	139
7.2.3	A selective hedging model for index funds	140
7.2.4	The FINLIB files	143
8	Case Studies in Financial Optimization	145
8.1	Preview	145
8.2	Application I: International Asset Allocation	146
8.2.1	Operational considerations	149
8.2.2	Results	151
8.2.3	The FINLIB files	156
8.3	Application II: Corporate Bond Portfolio Management	156
8.3.1	The FINLIB files	159
8.4	Application III: Insurance Policies with Guarantees	159
8.4.1	The FINLIB files	164
8.5	Application IV: Personal Financial Planning	164
8.5.1	The FINLIB files	168
	Bibliography	169
	Index	171
