Challenges for Agricultural Research

MINISTRY OF AGRICULTURE
OF THE CZECH REPUBLIC

EU2009.CZ

Table of contents

Abbreviations	11
Executive Summary	15
Report from the CRP Reflection Group meeting on “Vision for the Future”	19
Part I. Coping with Pressures on Natural Resources (Water and Soil).....	27
Chapter 1. Balancing Global Agricultural Water Supply and Demand.....	31
More food.....	32
More water because of changing diets	34
Scenarios of future water for food demand	35
Role of rainfed agriculture	36
Productivity improvements in irrigated areas	36
Trade	37
Challenges	37
Chapter 2. Effect of Reduced Water Supplies on Food Production Economies	43
Drivers for water scarcity	44
Importance of “new” challenges for agricultural water availability	44
Role of agricultural productivity	47
Conclusions	49
Chapter 3. Global Soil Resource Base: Degradation and Loss to Other Uses	53
Introduction	54
World population and soil resources	54
Soil degradation, land degradation and desertification	55
Determinants of soil degradation	55
Processes of soil degradation	56
Cause of soil degradation	57
Assessment of soil degradation, land degradation and desertification.....	58
Soil degradation by land misuse and soil mismanagement.....	61
Conversion to other land uses	62
Strategies to reverse soil and land degradation trends	63
Conclusion.....	65
Chapter 4. Soil Resources: Science-Based Sustainability	71
Myth 1: Agriculture should mimic natural systems	72
Myth 2: Mineral fertilisers are bad.....	72

Myth 3: Organic farming can be done anywhere.....	72
Myth 4: We know quantitatively the effects of soil use on food production, environmental degradation and climate change	73
Part II. Delivering Agriculture for Food and the Environment.....	75
Chapter 5. Managing Agricultural Landscapes for Production and Biodiversity Outcomes.....	79
Introduction	80
The ongoing declines in biodiversity	81
Current approaches to managing interactions between agriculture and biodiversity	82
Conclusion.....	84
Chapter 6. The Role of Genetically Modified Plants in Sustainable Crop Protection	89
Crop losses by pests and food security.....	90
Sustainable crop protection: the concept of IPM	91
Pest-resistant plants and sustainable crop protection	92
Pest-resistant plants in an IPM perspective.....	93
Conclusions	100
Challenges to use GM plants in sustainable crop protection.....	100
Chapter 7. Science-Based Policy Issues to Enable Sustainability on the Ground.....	109
Food comes from the supermarket	110
Food prices are too high.....	110
Purchasing seed every year is a conspiracy by multinational corporations	110
Rich country agriculture is extremely efficient and thus sustainable.....	110
Africa has no chance	111
Part III. Competition in Agriculture for Food, Fibre and Fuel.....	115
Chapter 8. Economic Balance on Competition for Arable Land between Food and Biofuel: Global Responsibilities of Food, Energy and Environmental Security	117
Food security.....	120
Energy security.....	123
Biofuels	123
Challenges	132
Environmental security	134
Chapter 9. Genetic Technology, Sustainable Animal Agriculture and Global Climate Change	145
The global environmental challenge	146
Global pork production	146
Pigs and phosphorus pollution	146
Enhancing phosphorus utilisation and reducing P output in pork production.....	147
The Enviropig TM : a genetic technology for meeting the global environmental challenge	148
Chapter 10. Challenges and Opportunities for Further Improvements in Wheat Yield	153
Introduction	154
Can we breed for yield potential with benefits in realistic growing conditions?	154
What physiological traits may be useful in future improvements of wheat yield potential?	155

Chapter 11. Replacement of Fish Meal in Aquaculture Diets with Plant Ingredients as a Means of Improving Seafood Quality	165
Fish metabolic advantages over terrestrial animals.....	166
Human health advantages resulting from seafood consumption.....	166
Cost of feeds in aquaculture.....	168
Cost of individual dietary components.....	168
Fish meal replacement.....	168
Fish oil replacement	171
Plant ingredients with novel functions: gossypol, saponins, quercetin, hydroxytyrosol, steroid-inhibitors	172
Research needs to facilitate wider/larger use of plant ingredients in aquafeeds	172
Part IV. Food Safety Today and Tomorrow: the Challenges in Changing Food and Farming Practices	175
Chapter 12. Major Trends in Mycotoxin Research.....	177
Introduction.....	178
History of mycotoxins and mycotoxicoses	178
Major mycotoxins	178
Other important mycotoxins.....	180
Research and development priorities	180
Conclusions.....	183
Chapter 13. Food without Zoonotic Agents: Fact or Fiction?	189
Introduction.....	190
Control of infectious diseases	190
(Re)emerging infectious diseases.....	191
Challenges in the control of foodborne diseases.....	192
International co-operation and communication.....	192
An integrated approach to food safety and zoonoses: global foodborne infections network.....	193
Conclusion.....	193
Chapter 14. Altering Foods Derived from Animals for the Future?.....	197
Decrease production and consumption of animal-derived foods or alter their composition?	198
Gross composition of animal products.....	199
New genetic selection approaches needed	200
Fatty acid composition of animal-derived foods.....	200
Side-effects of improved fatty acid composition	202
Altering the content of other minor compounds in animal-derived foods	203
Conclusions and additional considerations	203
Chapter 15. Plants for the Future	209
Ten thousand years of genetically modified plants.....	210
Biotechnology as a coherent answer to these challenges.....	210
Policy framework priorities.....	212
Public perception and regulatory framework.....	214
Chapter 16. Genetic Resources as the Building Blocks for Breeding: Current Status and Challenges	221
Introduction.....	222

Current status	228
Challenges ahead.....	230
Conclusions.....	235
Part V. Regulatory Challenges	241
Chapter 17. Animal Biotechnology in the United States: the Regulation of Animal Clones and Genetically Engineered Animals	243
Introduction.....	244
Regulation of animal clones.....	244
Regulation of genetically engineered animals.....	249
Summary	253
Chapter 18. Animal Cloning and Transgenesis	255
Introduction.....	256
Animal cloning.....	256
Animal transgenesis	265
General conclusions	273
Chapter 19. The Biotechnology and Biosafety Activities at the OECD	281
Introduction.....	282
Environmental risk/safety assessment of transgenic organisms.....	282
Risk/safety assessment of foods and feeds derived from transgenic organisms	285
Conclusions.....	286
Chapter 20. Biosafety Assessment of the EFSA GMO Panel.....	289
Introduction.....	290
The role of the scientific panel on GMO.....	290
Risk assessment of GMO	291
Legal background for the risk assessment of GMOs, GM food and GM feed at European Community level.....	293
Outlook.....	298
Tables	
Table 3.1. Processes, factors and causes of soil degradation.....	56
Table 3.2. Estimates of soil degradation by Glasod methodology.....	58
Table 3.3. Continental distribution of soil degradation by Glasod methodology	59
Table 3.4. Comparison between Glasod estimates of desertification in dry areas with that of UNEP methodology.....	59
Table 3.5. Estimates of land area under different vulnerability classes of desertification and the number of impacted population	60
Table 3.6. Estimates of land area in human-induced desertification risk classes	60
Table 3.7. Estimates of area affected by land degradation	61
Table 3.8. Estimate of secondary salinisation of irrigated lands in some countries	61
Table 3.9. Extent of urbanisation among other land uses in 2005	63
Table 3.10. Urbanisation in the USA.....	63
Table 8.1. Transnational land acquisition, 2006-2009.....	119
Table 8.2. Water security.....	121
Table 8.3. Scenario of the future: 2050.....	136
