Metaheuristic Search Concepts

A Tutorial with Applications to Production and Logistics

Contents

Part I Preliminaries

1	Intr	oduction	3	
2	The Knapsack Problem and Straightforward Optimization Methods.			
	2.1	The Reference Problem	7	
	2.2	An Additional Greedy Approach	10	
	2.3	Solving the Knapsack Problem by Enumeration	11	
	2.4	Branch and Bound	15	
	2.5	Summary	25	
3	Sea	rch Heuristics	31	
	3.1	Search Heuristics Based on Repeated Solution Construction	33	
		3.1.1 Randomized Search by Solution Construction	34	
		3.1.2 Memory-based Search by Solution Construction	37	
	3.2	Search Heuristics Based on Repeated Solution Modification	43	
		3.2.1 Allowing Deteriorations only in Dead-ends	47	
		3.2.2 Allowing Deteriorations at any Time	51	
	3.3	Search Heuristics Based on Repeated Solution Recombination	56	
Par	t II I	Metaheuristics		
4	Met	aheuristics in General	67	
	4.1	Intensification and Diversification	68	
	4.2	Algorithmic View	71	
	4.3	Defining the Term "Metaheuristic"	72	
	4.4	Summary	72	

5	Met	aheuristics Based on Solution Construction		75
	5.1	Greedy Randomized Adaptive Search Procedure		75
		5.1.1 Main Components of Greedy Randomized Ada	ptive	
		Search Procedures		76

•

		5.1.2	Algorithmic View	80
		5.1.3	Problem Related Aspects	81
		5.1.4	Intensification / Diversification	81
	5.2	Ant Co	blony Optimization	82
		5.2.1	Application to Optimization Problems	84
		5.2.2	Main Components of Ant Colony Optimization	87
		5.2.3	Algorithmic View	89
		5.2.4	Problem Related Aspects	90
		5.2.5	Intensification / Diversification	92
6	Meta	aheuris	tics Based on Solution Modification	95
	6.1	Local S	Search as a Common Principle	95
		6.1.1	The Link Between Solution Modification and Local Search.	95
		6.1.2	Solution Processing Schemes	96
		6.1.3	Problem Related Aspects	98
		6.1.4	Creating the Initial Solution	99
		6.1.5	Simple Improvement-based Local Search	99
	6.2	Tabu S	earch	101
		6.2.1	Main Components of Tabu Search	102
		6.2.2	Algorithmic View	102
		6.2.3	The Tabu List	103
		6.2.4	Problem Related Aspects	105
		6.2.5	Intensification / Diversification	107
	6.3	Thresh	old Accepting	109
		6.3.19	Main Components of Threshold Accepting	109
		6.3.2	Algorithmic View	110
3		6.3.3	Problem Related Aspects	110
		6.3.4	Intensification / Diversification	111
	6.4	Simula	ated Annealing	112
		6.4 _, 1	Homogenous vs. Inhomogenous Simulated Annealing	114
		6.4.2	Annealing Schedules	115
		6.4.3	Main Components of Simulated Annealing	116
		6.4.4	Algorithmic View	117
		6.4.5	Problem Related Aspects	117
		6.4.6	Intensification / Diversification	119
7	Meta	aheuris	tics Based on Solution Recombination	121
	7.1	Geneti	c Algorithm	121
		7.1.1	Main Components of Genetic Algorithms	123
		7.1.2	Algorithmic View	123
		7.1.3	Problem Related Aspects	126
		7.1.4	Description of the Components of a Genetic Algorithm	127
		7.1.5	Infeasibility	133
		7.1.6	Intensification / Diversification	134
	7.2	Scatter	r Search	135

		7.2.1	Main Components of Scatter Search			
		7.2.2	Algorithmic View			
		7.2.3	Intensification / Diversification 143			
8	Summarizing Remarks on Metaheuristics					
	8.1	Syster	natization Approaches 145			
		8.1.1	Systematization by Basic Principle			
		8.1.2	Alternative Taxonomies			
	8.2	Furthe	r Metaheuristics			
		8.2.1	Variable Neighborhood Search			
		8.2.2	Guided Local Search			
		8.2.3	Evolution Strategies			
		8.2.4	Particle Swarm Optimization			
			·			

Part III Applications

9	Met	aheuris	tics in Machine Scheduling159
	9.1	Introd	uction
		9.1.1	Machine Scheduling in the Job Shop Case
		9.1.2	Common Optimization Objectives
		9.1.3	The Reference Problem
		9.1.4	Types of Schedules
		9.1.5	Mathematical Formulation
		9.1.6	Problem Difficulty
	9.2	Comm	on Ways of Representing Solutions
		9.2.1	The Sequence-based Representation
		9.2.2	The Graph-based Representation
	9.3	Constr	uctive Heuristics
		9.3.1	List Scheduling Algorithms
		9.3.2	Insertion Algorithms
		9.3.3	Bottleneck Based Scheduling
	9.4	Metah	euristic Approaches Based on Solution Modification
		9.4.1	Neighborhood Concepts in Job Shop Scheduling
		9.4.2	Tabu Search Approaches
		9.4.3	Simulated Annealing Approaches
	9.5	Metah	euristic Approaches Based on Solution Construction
		9.5.1	Solution Construction in Job Shop Scheduling
		9.5.2	ACO Approaches
	9.6	Metah	euristic Approaches Based on Solution Recombination 221
		9.6.1	Genetic Algorithms
10	Met	aheuris	tics in Vehicle Routing
	10.1	Introdu	uction
		10.1.1	The Reference Problem
		10.1.2	Common Optimization Objectives
	10.2	Solutio	on Representation

h

	10.3	Constructive Heuristics		
		10.3.1 Savings Algorithm		
	10.4	Metaheuristic Approaches Based on Solution Construction 250		
		10.4.1 Greedy Randomized Adaptive Search Procedure		
	10.5	Metaheuristic Approaches Based on Solution Modification 266		
		10.5.1 Classic Neighborhood Concepts in Vehicle Routing 266		
		10.5.2 Tabu Search		
	10.6	Metaheuristic Approaches Based on Solution Recombination 281		
		10.6.1 Genetic Algorithm		
11	Summary			
	11.1	Metaheuristics from a General Point of View		
	11.2	Guideline for Application Development		
	11.3	Comparison of Tabu Search for JSSP and VRP		
	11.4	Outlook		
		11.4.1 Further Developments and Trends in Heuristic Optimization 297		
		11.4.2 (Meta)heuristics in Industrial Practice
