Spatial Data Analysis

Models, Methods and Techniques

B 377676

 Springer

Contents

1	Introduction	1
1.1	Data and Spatial Data Analysis	1
1.2	Types of Spatial Data	3
1.3	The Spatial Data Matrix	5
1.4	Spatial Autocorrelation	7
1.5	The Tyranny of Spatial Data	10
 Part I The Analysis of Area Data		
2	Exploring Area Data	15
2.1	Mapping and Geovisualisation	15
2.2	The Spatial Weights Matrix	19
2.3	Global Measures and Tests for Spatial Autocorrelation	22
2.4	Local Measures and Tests for Spatial Autocorrelation	26
3	Modelling Area Data	31
3.1	Spatial Regression Models	32
3.2	Tests for Spatial Dependence	35
3.3	The Spatial Durbin Model	37
3.4	Estimation of Spatial Regression Models	38
3.5	Model Parameter Interpretation	41
 Part II The Analysis of Spatial Interaction Data		
4	Models and Methods for Spatial Interaction Data	47
4.1	Visualising and Exploring Spatial Interaction Data	47
4.2	The General Spatial Interaction Model	49
4.3	Functional Specifications and the Method of Ordinary Least Squares Regression	50

4.4	The General Poisson Spatial Interaction Model	53
4.5	Maximum Likelihood Estimation of the Poisson Spatial Interaction Model	55
4.6	A Generalisation of the Poisson Model of Spatial Interaction . . .	57
5	Spatial Interaction Models and Spatial Dependence.	61
5.1	The Independence (Log-Normal) Spatial Interaction Model in Matrix Notation.	62
5.2	Econometric Extensions to the Independence Spatial Interaction Model	64
5.3	Spatial Filtering Versions of Spatial Interaction Models	67
