

Integrated Market and Credit Portfolio Models

Risk Measurement and Computational Aspects

\$

With a foreword by Univ.-Prof. Dr. Thomas Hartmann-Wendels

GABLER EDITION WISSENSCHAFT

Contents

List of Tables	xiii
List of Figures	XV
List of Acronyms	xvii
List of Symbols	xix

1 Introduction	1
----------------	---

1.1 Motivation	1
\$≥ 1.2 Structure	4

2 The Integrated Market and Credit Portfolio Model......7

2.1 General Approach	7
2.2 Industry Standards as Special Cases	9
2.3 Example of an Integrated Market and Credit Portfolio Model 1	1

3.1 Introduction	19
3.2 Review of the Literature	20
3.3 Modifications of the Base Case Model	25
3.3.1 Inhomogeneities	25
3.3.2 Discrete Mixture of Normal Distributions for the	
Systematic Credit Risk Factor Z	27
3.3.3 Multivariate t – Distribution of the Asset Returns	29
3.3.4 A Simple Contagion Model	31
3.3.5 An Enhanced Recovery Model	33

1

3.4 Numerical Results	38
3.4.1 Parameters	38
3.4.2 Results for the Base Case Model 4	1 2
3.4.3 Results for the Modified Base Case Model 4	16
3.4.3.1 Results for Inhomogeneous Credit Portfolios 4	16
3.4.3.2 Results for a Discrete Mixture of Normal Distributions for the	
Systematic Credit Risk Factor Z 4	19
3.4.3.3 Results for a Multivariate t – Distribution of the Asset Returns	51
3.4.3.4 Results for the Simple Contagion Model	53
3.4.3.5 Results for the Enhanced Recovery Model	54
3.4.4 Additional Stress Tests	56
3.5 Conclusions	50

4.1 Introduction	63
4.2 Review of the Literature	66
4.3 General Computation Approach	68
4.4 Numerical Results	71
4.4.1 Parameters	. 71
4.4.2 Methodology	. 73
4.4.3 Results for a Portfolio of Defaultable Zero Coupon Bonds	. 74
4.4.4 Results for a Portfolio of European Call Options with Counterparty Risk	. 82
4.5 Discussion	. 85
4.6 Importance Sampling Techniques for the Fourier-Based Approach	. 90
4.6.1 Importance Sampling for the Probability Estimator	. 90
4.6.2 Importance Sampling for the Estimators of the	
Unconditional Characteristic Function	. 95
4.7 Conclusions	. 97

5 Importance Sampling for Integrated Market and
Credit Portfolio Models
5.1 Introduction
5.2 Review of the Literature
5.3 Importance Sampling Techniques for the General Approach
5.3.1 General Remarks about Importance Sampling
5.3.2 Application of a Two-Step-Importance Sampling Technique 107
5.3.3 Discussion of the Two-Step-Importance Sampling Technique 119
5.3.4 Modification: Insertion of a Third Step 124
5.3.5 Combination of the Three Steps 131
5.4 Numerical Results
5.4.1 Parameters
5.4.2 Results for a Portfolio of Defaultable Zero Coupon Bonds 136
5.4.3 Results for a Portfolio of European Call Options with Counterparty Risk 147
5.4.4 Comparison of the Fourier-Based Approach with Full Monte Carlo
Simulation Combined with Importance Sampling
5.5 Conclusions
6 Conclusions
Appendices
Appendix 1 161
Appendix 2 163
Appendix 3 164
