# Contents

Preface	ix
<b>1 Portfolio Choice</b>	<b>1</b>
1.1 Introduction	1
1.2 Utility	2
1.2.1 Preferences and utility	2
1.2.2 Utility and risk aversion	7
1.3 Mean-variance analysis	9
1.3.1 Introduction	9
1.3.2 All risky assets	9
1.3.3 A riskless asset	14
1.3.4 Mean-variance analysis and expected utility	18
1.3.5 Equilibrium: the capital-asset pricing model	19
1.4 Exercises	20
<b>2 The Binomial Model</b>	<b>25</b>
2.1 One-period model	25
2.1.1 Introduction	25
2.1.2 Hedging	26
2.1.3 Arbitrage	28
2.1.4 Utility maximization	29
2.2 Multi-period model	31
2.2.1 Introduction	31
2.2.2 Dynamic hedging	33
2.2.3 Change of probability	40
2.2.4 Utility maximization	42
2.2.5 Path-dependent claims	44
2.2.6 American claims	49
2.2.7 The non-standard multi-period model	54
2.3 Exercises	59
<b>3 A General Discrete-Time Model</b>	<b>63</b>
3.1 One-period model	63
3.1.1 Introduction	63
3.1.2 Arbitrage	69
3.2 Multi-period model	73
3.2.1 Introduction	73

3.2.2	Pricing claims . . . . .	76
3.3	Exercises . . . . .	81
<b>4</b>	<b>Brownian Motion</b>	<b>83</b>
4.1	Introduction . . . . .	83
4.2	Hitting-time distributions . . . . .	85
4.2.1	The reflection principle . . . . .	85
4.2.2	Transformations of Brownian motion . . . . .	93
4.2.3	Computations using martingales . . . . .	94
4.3	Girsanov's Theorem . . . . .	97
4.4	Brownian motion as a limit . . . . .	100
4.5	Stochastic calculus . . . . .	102
4.6	Exercises . . . . .	109
<b>5</b>	<b>The Black–Scholes Model</b>	<b>113</b>
5.1	Introduction . . . . .	113
5.2	The Black–Scholes formula . . . . .	114
5.2.1	Derivation . . . . .	114
5.2.2	Dependence on the parameters: the Greeks . . . . .	116
5.2.3	Volatility . . . . .	119
5.3	Hedging and the Black–Scholes equation . . . . .	123
5.3.1	Self-financing portfolios . . . . .	123
5.3.2	Dividend-paying claims . . . . .	128
5.3.3	General terminal-value claims . . . . .	130
5.3.4	Specific terminal-value claims . . . . .	134
5.3.5	Utility maximization . . . . .	137
5.3.6	American claims . . . . .	143
5.4	Path-dependent claims . . . . .	146
5.4.1	Forward-start and lookback options . . . . .	146
5.4.2	Barrier options . . . . .	150
5.5	Dividend-paying assets . . . . .	156
5.6	Exercises . . . . .	159
<b>6</b>	<b>Interest-Rate Models</b>	<b>165</b>
6.1	Introduction . . . . .	165
6.2	Survey of interest-rate models . . . . .	168
6.2.1	One-factor models . . . . .	168
6.2.2	Forward-rate and market models . . . . .	172
6.3	Gaussian random-field model . . . . .	174
6.3.1	Introduction . . . . .	174
6.3.2	Pricing a caplet on forward rates . . . . .	178
6.3.3	Markov properties . . . . .	182
6.3.4	Finite-factor models and restricted information . . . . .	188
6.4	Exercises . . . . .	190

<b>A</b>	<b>Mathematical Preliminaries</b>	<b>193</b>
A.1	Probability background . . . . .	193
A.1.1	Probability spaces . . . . .	193
A.1.2	Conditional expectations . . . . .	194
A.1.3	Change of probability . . . . .	194
A.1.4	Essential supremum . . . . .	196
A.2	Martingales . . . . .	196
A.3	Gaussian random variables . . . . .	198
A.3.1	Univariate normal distributions . . . . .	198
A.3.2	Multivariate normal distributions . . . . .	200
A.4	Convexity . . . . .	204
<b>B</b>	<b>Solutions to the Exercises</b>	<b>207</b>
B.1	Portfolio Choice . . . . .	207
B.2	The Binomial Model . . . . .	213
B.3	A General Discrete-Time Model . . . . .	221
B.4	Brownian Motion . . . . .	226
B.5	The Black–Scholes Model . . . . .	231
B.6	Interest-Rate Models . . . . .	240
