

Patrick Jochem

A CO₂ Emission Trading Scheme for German Road Transport

assessing the impacts using a meso economic model with multi-agent attributes

B 366306

Nomos

Table of Contents

List of Figures	12
List of Tables	14
List of Common Abbreviations	15
1 Introduction	17
1.1 Objectives	20
1.2 Structure	20
2 Road transport in Germany	22
2.1 Current situation and transport mode choice in German passenger transport	23
2.1.1 Relevant data sources in German passenger transport	26
2.1.2 Demand segments in mode choice in motorized individual transport	27
2.2 The current state in freight transport and its mode choice	28
2.2.1 Relevant freight transport data sources	30
2.3 Conclusion I	31
3 How to reduce CO ₂ emissions from road transport	32
3.1 Policy instruments to lower CO ₂ emissions from road transport	33
3.1.1 Overview of current policy instruments to reduce CO ₂ emissions from German road transport	35
3.1.2 CO ₂ certificate trading scheme in transport and the European Emission Trading Scheme (EU-ETS)	39
3.1.3 Studies on CO ₂ emissions trading schemes in German transport	51
3.2 Technical options to reduce CO ₂ emissions in road transport	58
3.2.1 Alternative driving technologies	59
3.2.2 Other technical methods	65
3.3 Conclusion II	67
	9

4	Economic models and their enrichment through multi-agent features	68
4.1	Simulation within the social sciences	68
4.2	Classical economic models	70
4.3	Multi-agent models	72
4.3.1	Evolution and epistemology of multi-agent models	73
4.3.2	Properties of a behavioural multi-agent model in road transport	75
4.3.3	Discussion: classical microeconomic vs. multi-agent models	78
4.3.4	Software for programming multi-agent models	82
4.4	Previous models used to analyse transport behaviour in Germany	84
4.4.1	The idea behind microeconomic transport models	84
4.4.2	The idea of macroeconomic transport models	87
4.5	Previous multi-agent models in road transport	88
4.6	Conclusions III	89
5	Impacts on German road transport through a CO ₂ certificate trading scheme	91
5.1	World of simulation: artificial German road transport	92
5.2	The developed model	95
5.2.1	Model schedule	95
5.2.2	Classes, parameters and data structure of the model	100
5.2.3	Price policy of oil companies	102
5.2.4	Reaction behaviour of freight forwarders	110
5.2.5	Reaction behaviour of households	119
5.2.6	Passenger car purchase of households	131
5.3	Results of the meso economic model	137
5.4	Conclusions IV	144
6	Macroeconomic impacts through a CO ₂ certificate trading scheme	147
6.1	The system dynamics model ASTRA	147
6.2	The business-as-usual scenario	150
6.3	Economic impacts	153
6.4	Environmental impacts	156
6.5	Conclusions V	157
7	Summary, conclusions and outlook	159
7.1	Summary	159
7.2	Conclusions and outlook	162
