2	Cor 2.1	plexity and information gathering Complex problems and their influence2.1.1Types of Problems2.1.2Causes for dynamic complexity2.1.3Difficulties when dealing with complexity	ple:	 	oro	ble	 			•				13 13 13 15 17			

	2.2	Learni	ing in and about complex systems	18
		2.2.1	Learning in general	18
		2.2.2	Types of learning processes	19
		2.2.3	Mental models	20
		2.2.4	Learning as a feedback process	21
		2.2.5	Team learning	23
		2.2.6	Organizational learning	24
		2.2.7	Knowledge	27
	2.3	Concle	uding remark	28
3	Mo	deling	process and simulation	29
	3.1	Syster	n, model and simulation	29
		3.1.1	What is a system	29
		3.1.2	Classification of systems	30
		3.1.3	Complexity of systems	32
		3.1.4	Models and modeling	34
		3.1.5	Simulation	35
	3.2	Simula	ation as managerial decision guidance	35
		3.2.1	Types of simulations	35
		3.2.2	Process of simulation	37
		3.2.3	Benefits of simulation	38
		3.2.4	Limits to simulation	38
4	Fuz	zv Log	zic	41
-	4.1	Fuzzy	thinking	41
		4.1.1	Limits of bivalence	41
		4.1.2	Multivalence	43
	4.2	Fuzzy	set theory	46
	4.3	Fuzzy	systems	51
		4.3.1	A basic fuzzy system	51
		432	Fuzzification	52
		433	Fuzzy rule base and fuzzy inference engine (fuzzy system)	53
		434	Defuzzification	54
		435	Excursus: decision tree	55
	4.4	Advar	stages of fuzzy reasoning	56
5	Svs	tem th	inking	59
Č	51	Tools	for system thinking	50
	0.1	511	The idea behind system thinking	50
		5.1.1	Relationships between elements	60
		513	Feedback loop and the behavior of systems	62
		514	Methods of formalization	66
		515	Systems archetypos	60
	59	Svetor	by buome at one types	75
	0.2	591	Mooning of system thinking	75
		0.2.1 5 9 9	The need for system thinking	10 77
		0.4.4	Incheed for system brinking	- 11

		5.2.3	Qualitative and quantitative system dynamics	77
6	Svst	em dv	vnamics	79
-	61	Ouant	itative system dynamics	70
	0.1	611	Background	70
		612	Dunamic modeling process and tools	80
		612	The strengths and weaknesses of quantitative system dy	00
		0.1.0	namics	80
	62	Qualit	names	80
	0.2	Guant 691	Songitivity model	00
		0.2.1	Drohlamlägungamethodo	101
		0.2.2	CAMMA, on advancement of the error impact matrix	100
		0.2.3	GAIMINIA: an advancement of the cross-impact-matrix	110
	0.0	0.2.4	I ne forces and limitations of qualitative system dynamics	112
	6.3	Compa	aring the two modeling approaches	113
		6.3.1	Comparing the characteristics of qualitative and quanti-	110
			tative modeling approaches	113
		6.3.2	The intertwined project learning process	115
		6.3.3	The missing link	116
Π	Ν	ew de	evelopments	19
7	Mas	stering	complexity with matrices	121
	7.1	Relatio	on between an element and the system	121
		7.1.1	Cross-impact-matrix	121
		7.1.2	The matter of time	131
		7.1.3	Cross-time-matrix	133
		7.1.4	Combining the information of CIM and CTM	136
	72	Relatio	on between two elements in a system	138
		721	Cross-delay-matrix: influence of delay	139
		722	Cross-effect-matrix: spread of effects	145
		723	Combining effect and delay	149
		724	Summary	152
	73	Analy	zing all naths	153
	1.0	731	Botween two nodes	153
		7.0.1	Terrerda ono nodo	154
	71	7.0.2 Tranci	Towards one node	156
	1.4	Transi	ICION	100
8	Mas	stering	complexity with simulation	159
	8.1	Introd	luction \ldots	159
	8.2	Modifi	ication driven simulation	161
		8.2.1	Functionality	161
		8.2.2	Interpretation of the results	164
		8.2.3	Qualities of this type of simulation $\ldots \ldots \ldots \ldots \ldots$	165
		8.2.4	Sophistication of the approach	165
	8.3	Level	driven simulation	166
