# Bayesian Statistics:

## An Introduction

PETER M. LEE

*Provost of Wentworth College, University of York, England*

*Second Edition*

A member of the Hodder Headline Group  
LONDON • SYDNEY • AUCKLAND

Copublished in North, Central and South America by  
John Wiley & Sons Inc., New York • Toronto

# Contents

<b>Preface</b>	<b>viii</b>
<b>Preface to the First Edition</b>	<b>ix</b>
<b>1 Preliminaries</b>	<b>1</b>
1.1 Probability and Bayes' theorem	1
1.2 Examples on Bayes' theorem	8
1.3 Random variables	11
1.4 Several random variables	16
1.5 Means and variances	20
1.6 Exercises	27
<b>2 Bayesian Inference for the Normal Distribution</b>	<b>33</b>
2.1 Nature of Bayesian inference	33
2.2 Normal prior and likelihood	36
2.3 Several normal observations with a normal prior	40
2.4 Dominant likelihoods	43
2.5 Locally uniform priors	45
2.6 Highest density regions (HDRs)	49
2.7 Normal variance	50
2.8 HDRs for the normal variance	53
2.9 The role of sufficiency	55
2.10 Conjugate prior distributions	59
2.11 The exponential family	63
2.12 Normal mean and variance both unknown	65
2.13 Conjugate joint prior for the normal distribution	69
2.14 Exercises	73
<b>3 Some Other Common Distributions</b>	<b>77</b>
3.1 The binomial distribution	77
3.2 Reference prior for the binomial likelihood	83
3.3 Jeffreys' rule	86
3.4 The Poisson distribution	90

3.5	The uniform distribution . . . . .	93
3.6	Reference prior for the uniform distribution . . . . .	97
3.7	The tramcar problem . . . . .	99
3.8	The first digit problem: invariant priors . . . . .	100
3.9	The circular normal distribution . . . . .	103
3.10	Approximations based on the likelihood . . . . .	107
3.11	Exercises . . . . .	112
<b>4</b>	<b>Hypothesis Testing</b>	<b>117</b>
4.1	Hypothesis testing . . . . .	117
4.2	One-sided hypothesis tests . . . . .	121
4.3	Lindley's method . . . . .	123
4.4	Point (or sharp) null hypotheses with prior information . . . . .	124
4.5	Point null hypotheses for the normal distribution . . . . .	127
4.6	The Doogian philosophy . . . . .	133
4.7	Exercises . . . . .	134
<b>5</b>	<b>Two-sample Problems</b>	<b>139</b>
5.1	Two-sample problems – both variances unknown . . . . .	139
5.2	Variances unknown but equal . . . . .	142
5.3	Variances unknown and unequal (Behrens–Fisher problem) . . . . .	145
5.4	The Behrens–Fisher controversy . . . . .	147
5.5	Inferences concerning a variance ratio . . . . .	149
5.6	Comparison of two proportions: the $2 \times 2$ table . . . . .	152
5.7	Exercises . . . . .	154
<b>6</b>	<b>Correlation, Regression and the Analysis of Variance</b>	<b>159</b>
6.1	Theory of the correlation coefficient . . . . .	159
6.2	Examples on the use of the correlation coefficient . . . . .	165
6.3	Regression and the bivariate normal model . . . . .	166
6.4	Conjugate prior for the bivariate regression model . . . . .	172
6.5	Comparison of several means – the one way model . . . . .	174
6.6	The two way layout . . . . .	182
6.7	The general linear model . . . . .	185
6.8	Exercises . . . . .	189
<b>7</b>	<b>Other Topics</b>	<b>193</b>
7.1	The likelihood principle . . . . .	193
7.2	The stopping rule principle . . . . .	197
7.3	Informative stopping rules . . . . .	200
7.4	The likelihood principle and reference priors . . . . .	203
7.5	Bayesian decision theory . . . . .	204
7.6	Bayes linear methods . . . . .	210
7.7	Decision theory and hypothesis testing . . . . .	212
7.8	Empirical Bayes methods . . . . .	214
7.9	Exercises . . . . .	217

<b>8 Hierarchical Models</b>	<b>223</b>
8.1 The idea of a hierarchical model	223
8.2 The hierarchical normal model	227
8.3 The baseball example	231
8.4 The Stein estimator	232
8.5 Bayesian analysis for an unknown overall mean	236
8.6 The general linear model revisited	240
8.7 Exercises	244
<b>9 The Gibbs Sampler and Other Numerical Methods</b>	<b>249</b>
9.1 Introduction to numerical methods	249
9.2 The <i>EM</i> algorithm	250
9.3 Data augmentation by Monte Carlo	257
9.4 The Gibbs sampler	259
9.5 Other algorithms	268
9.6 Exercises	270
<b>Appendix A Common Statistical Distributions</b>	<b>275</b>
A.1 Normal distribution	276
A.2 Chi-squared distribution	276
A.3 Normal approximation to chi-squared	277
A.4 Gamma distribution	277
A.5 Inverse chi-squared distribution	278
A.6 Inverse chi distribution	279
A.7 Log chi-squared distribution	279
A.8 Student's <i>t</i> distribution	280
A.9 Normal/chi-squared distribution	281
A.10 Beta distribution	282
A.11 Binomial distribution	283
A.12 Poisson distribution	283
A.13 Negative binomial distribution	284
A.14 Hypergeometric distribution	285
A.15 Uniform distribution	286
A.16 Pareto distribution	286
A.17 Circular normal distribution	288
A.18 Behrens' distribution	289
A.19 Snedecor's <i>F</i> distribution	290
A.20 Fisher's <i>z</i> distribution	291
A.21 Cauchy distribution	292
A.22 The probability that one beta variable is greater than another	292
A.23 Bivariate normal distribution	293
A.24 Multivariate normal distribution	293
A.25 Distribution of the correlation coefficient	294

<b>Appendix B Tables</b>	<b>297</b>
B.1 Percentage points of the Behrens–Fisher distribution . . . . .	298
B.2 HDRs for the chi-squared distribution . . . . .	300
B.3 HDRs for the inverse chi-squared distribution . . . . .	302
B.4 Chi-squared corresponding to HDRs for $\log \chi^2$ . . . . .	304
B.5 Values of F corresponding to HDRs for $\log F$ . . . . .	306
<b>Appendix C Further Reading</b>	<b>327</b>
<b>References</b>	<b>329</b>
<b>Index</b>	<b>339</b>

*Note:* The tables in the Appendix are intended for use in conjunction with a standard set of statistical tables, for example, Lindley and Scott (1995) or Neave (1978). They extend the coverage of these tables so that they are roughly comparable with those of Isaacs *et al.* (1974) or with the tables in Appendix A of Novick and Jackson (1974). However, tables of values easily computed with a pocket calculator have been omitted. The tables have been computed using NAG routines and algorithms described in Patil (1965) and Jackson (1974).
