

Arnold Hanslmeier

Water in the Universe

 Springer

Contents

1	Water on Earth, Properties of Water	1
1.1	The Role of Water in History	1
1.1.1	Water in Ancient Cultures	1
1.1.2	Modern Society and Water	5
1.2	The Chemical Elements Water Consists of	6
1.2.1	Hydrogen	6
1.2.2	Oxygen	8
1.3	Water, Chemical and Physical Properties	11
1.3.1	Chemical Properties	11
1.3.2	Physical Properties of Water	12
1.3.3	Evaporation and Condensation	16
1.3.4	Ice	17
1.3.5	H_2O^+	19
1.4	Chemical Reactions and Water	20
1.4.1	Chemical Bonds	20
1.4.2	Acids and pH Value	20
1.4.3	Hydrates, Water in Crystals	20
1.4.4	Water: Spectral Signatures	21
1.5	The Hydrologic Cycle	22
1.5.1	Evaporation and Precipitation Balance	22
1.5.2	The Hydrologic Cycle and Climate Change	24
2	Life and Water	25
2.1	Life and Environment	25
2.1.1	The Importance of Water	25
2.1.2	Definition of Life	25
2.1.3	Evolution of Life	27
2.1.4	Life Under Extreme Conditions	30
2.2	Water and Other Solvents	30
2.2.1	The Importance of Solvents to Life	30
2.2.2	Other Solvents than Water	32
2.3	Energy for Life	33

2.3.1	Energy	33
2.3.2	Metabolic Diversity	33
2.3.3	Solar Energy	34
2.3.4	Photosynthesis and Respiration	35
3	Water on Planets and Dwarf Planets	37
3.1	Classification of Objects in the Solar System	37
3.1.1	Overview	37
3.1.2	Physical Parameters of Planets	38
3.2	Terrestrial Planets	38
3.2.1	Earth	39
3.2.2	Mercury	40
3.2.3	Venus	41
3.2.4	Mars	44
3.2.5	The Early Sun and Evolution of Terrestrial Planets	47
3.2.6	Dry Venus—Humid Earth—Climate Changes on Mars	49
3.3	Giant Planets	58
3.3.1	Jupiter	58
3.3.2	Saturn	60
3.3.3	Uranus	61
3.3.4	Neptune	62
3.3.5	Water on Giant Planets	65
3.4	Dwarf Planets	66
3.4.1	Pluto	67
3.4.2	Ices on Other Dwarf Planets	69
4	Satellites of Planets in the Solar System	71
4.1	Galilean Satellites	71
4.1.1	Io	71
4.1.2	Europa	73
4.1.3	Callisto	77
4.1.4	Ganymede	77
4.2	Satellites of Saturn	79
4.2.1	Overview	79
4.2.2	Titan	80
4.2.3	Other Satellites of Saturn	84
4.3	Satellites of Uranus and Neptune	93
4.3.1	The Satellites of Uranus	93
4.3.2	The Satellites of Neptune	97
4.4	The Earth Moon	99
4.4.1	Water on the Moon?	100
5	Water on Small Solar System Bodies	105
5.1	Clouds of Particles	105
5.1.1	The Kuiper Belt	105
5.1.2	The Oort Cloud	110

5.2	Comets	112
5.2.1	Early Observations	112
5.2.2	Orbital Characteristics of Comets	112
5.2.3	Physics of Comets	113
5.2.4	Collisions with Comets	116
5.2.5	Detection of Water on Comets	117
5.3	Asteroids	119
5.3.1	General Properties	119
5.3.2	Classification of Asteroids	119
5.3.3	NEOs	120
5.3.4	The Cretaceous-Tertiary Impact	121
5.3.5	Water and Ice on Asteroids	122
5.3.6	Asteroids as a Source for Water on Earth	124
5.4	Meteorites	124
5.4.1	General Properties	124
5.4.2	Classification	125
5.4.3	Water in Meteorites	126
6	Water on Extrasolar Planets?	129
6.1	How to Detect Extrasolar Planets	129
6.1.1	Detection Methods	129
6.1.2	Extrasolar Planets Found by Different Detection Methods	132
6.1.3	Some Examples of Extrasolar Planets	134
6.2	Habitable Zones	134
6.2.1	Habitability	135
6.2.2	Circumstellar Habitable Zones	135
6.2.3	Galactic Habitable Zone	136
6.2.4	Habitable Zone Around Giant Planets	137
6.3	Dust Debris Around Stars	137
6.3.1	Signatures of Dust Around Stars	138
6.3.2	Dust Around Vega	139
6.4	Water Detection on Extrasolar Planets	141
6.4.1	Detection of Planetary Atmospheres	141
6.4.2	Hot Jupiters	142
6.4.3	Water on Extrasolar Planets	146
6.4.4	Some Model Calculations	146
6.4.5	Super Earth Planets	150
7	Water in Interstellar Space and Stars	153
7.1	Interstellar Medium	153
7.1.1	Physical Properties	153
7.1.2	Molecules in the Interstellar Medium	155
7.1.3	Interstellar Dust Lifecycle	157
7.1.4	Water Masers	158
7.2	Water in Starforming Regions	160

7.2.1	Clouds and Cloud Collapse	160
7.2.2	H ₂ O Masers in Star Forming Regions—A Model	163
7.2.3	Water Signatures in Protostars	164
7.2.4	T Tauri Stars	166
7.3	Water Signatures in Spectra of Late Type Stars and the Sun	169
7.3.1	Late Type Stars and Water	169
7.3.2	Water in Sunspots?	172
7.4	Water in Galaxies	173
7.4.1	The Milky Way Galaxy	173
7.4.2	Water in the Galaxy?	174
7.4.3	Water in Galaxies	174
7.4.4	Galaxy Clusters	176
7.4.5	IR-Galaxies	176
7.4.6	Water Masers in Nearby Galaxies	178
7.4.7	Mega-Masers	179
8	Water—Where Does It Come from?	181
8.1	The Evolution of the Universe	181
8.1.1	An Expanding Universe	181
8.1.2	Radiation from the Early Universe	182
8.1.3	Abundance of Elements	184
8.1.4	No Water in the Early Universe	185
8.2	Stellar Evolution	185
8.2.1	Red Giants	187
8.2.2	The Asymptotic Giant Branch	189
8.2.3	A Carbon Flash?	189
8.2.4	Post AGB Evolution	190
8.2.5	Elements Heavier than He	190
8.2.6	The Ultimate Fate of a Low Massive Star: White Dwarfs	192
8.3	Massive Stars	192
8.3.1	Main Sequence Evolution of Massive Stars	192
8.3.2	Supernova Explosion	194
8.3.3	Stellar Populations	196
9	Appendix	199
9.1	How to Detect Water	199
9.1.1	Transparency of the Earth's Atmosphere	199
9.1.2	In Situ Measurements	200
9.1.3	Spectroscopic Signatures	201
9.2	Satellite Missions	206
9.2.1	Water Detection with SWAS	206
9.2.2	IR Satellites	207
9.2.3	Future Astronomical Telescopes	208
9.3	Some Astrophysical Concepts	209
9.3.1	Apparent Magnitude	209
