Preface 11

Editors' Acknowledgement 13

1. **Introduction: Towards a Historical View of Humanity and the Biosphere**
Goudsblom and De Vries
 - 1.1. A new sense of change 15
 - 1.2. The static character of ancient world views 17
 - 1.3. Myths, maps, and models 18

2. **Introductory Overview: the Expanding Anthroposphere**
Goudsblom
 - 2.1. Life before humans 21
 - 2.1.1. The first environmental crisis in the biosphere 21
 - 2.1.2. Continental drift 22
 - 2.2. Early humans and their first big impact: fire 23
 - 2.2.1. Human origins and extensive growth 23
 - 2.2.2. Intensive growth: technology, organization and civilization 27
 - 2.2.3. The original domestication of fire 28
 - 2.2.4. Long-term consequences 30
 - 2.2.5. Regimes 33
 - 2.3. Intensified human impact: agrarianization 34
 - 2.3.1. Emergence 35
 - 2.3.2. Continuities 36
 - 2.3.3. Sequences 37
 - 2.3.4. Hypertrophy and atrophy 39
 - 2.4. Industrialization: the rise of the third regime 42

3.	The Holocene: Global Change and Local Response	
	<i>Marchant and De Vries</i>	
3.1.	Introduction	47
3.2.	Holocene climate and climate change	50
3.3.	Climate change and human populations: Equatorial Africa	57
3.3.1.	From the Late Glacial towards the middle-Holocene climatic 'optimum'	58
3.3.2.	Environmental drying about 4000 yr BP and increasing vegetation degradation: the transition to the present	60
3.4.	Early human-environment interactions: the Americas	62
3.4.1.	Environmental and cultural change in western Peru	62
3.4.2.	Late-Holocene environmental and Mayan cultures	64
3.5.	The Vera basin in Spain: 10,000 years of environmental history	65
3.6.	Conclusions	70
4.	Environment and the Great Transition: Agrarianization	
	<i>De Vries and Marchant</i>	
4.1.	Introduction	71
4.2.	Environment and human habitat	73
4.2.1.	Mountains, hills and plains	75
4.2.2.	Rivers, lakes and coasts – and the sea	77
4.2.3.	Steppe and savannah lands	80
4.2.4.	Forest peoples	81
4.3.	The agricultural transition: some narratives from science	84
4.3.1.	The Iranian plateau and the surrounding plains	84
4.3.2.	Europe	88
4.3.3.	East and South Asia	92
4.3.4.	North America: the Anasazi and the Hohokam people	93
4.4.	The agricultural transition: how and why?	96
4.4.1.	The origins and spread of agriculture and pastoralism	97
4.4.2.	Causes and consequences of agricultural expansion	100
4.5.	Mapping the past: Europe in the Late Neolithic	107
4.6.	Conclusions	108

5.	Exploring the Past: on Methods and Concepts <i>De Vries, Marchant and De Greef</i>
5.1.	Introduction 111
5.2.	Concepts and categories to organize the knowledge of the past 112
5.2.1.	An epistemological note 113
5.2.2.	Models: population-environment interactions 115
5.3.	Time, space and resources 119
5.3.1.	Orientation in time 120
5.3.2.	Orientation in space 124
5.3.3.	Resources 128
5.4.	Complexity 129
5.5.	Methods of acquiring knowledge about the past: setting the clock 134
5.5.1.	Absolute dating 136
5.5.2.	Relative estimates of age 138
5.6.	The potential for human habitation and stages of agricultural development 139
5.7.	Conclusions 146
6.	Increasing Social Complexity <i>De Vries</i>
6.1.	Introduction 149
6.2.	Manifestations of increasing social complexity 150
6.2.1.	Megaliths 151
6.2.2.	Non-agricultural resources 154
6.2.3.	Interactions: trade 177
6.2.4.	Interactions: diffusion and migration 179
6.3.	Early state and empire formation 181
6.3.1.	Early urban centres in Mesopotamia 181
6.3.2.	South Asia: Indus-Sarasvati 184
6.3.3.	State formation in the Aegean 187
6.3.4.	Meso-America 189
6.4.	From states to empires 192
6.4.1.	Egypt 192
6.4.2.	China 195
6.5.	What happened in the fringes of empires? 198
6.6.	The decline and fall of social complexity 203
6.7.	Conclusions 207

7.	Empire: the Romans in the Mediterranean <i>Van der Leeuw and De Vries</i>
7.1.	Introduction: Why the Roman Empire as a case study and from which perspective? 209
7.2.	Critical social and environmental phenomena accompanying Roman expansion 211
7.2.1.	An increase in surface and population 211
7.2.2.	Urbanisation 214
7.2.3.	Transport and commerce 217
7.3.	The human environment in Roman times 223
7.3.1.	Geography and climate 224
7.3.2.	Colonization 226
7.3.3.	Introducing industrialization of agriculture and commercial exploitation of the land 231
7.3.4.	A different perception of space and the landscape 234
7.4.	The Roman Empire as a self-organizing system 238
7.4.1.	Self-organization 238
7.4.2.	An example: newly colonized environments 243
7.4.3.	Stagnation is decay: changing settlement patterns in the Rhône valley 100 BC to 600 AD 244
7.4.4.	What consequences does this have on the level of the Empire – how did it become a ‘global crisis’? 248
7.5.	The decline and end of the Empire 248
7.5.1.	The disintegration process 248
7.5.2.	Causes and effects: on the centre-periphery information gradient 251
7.6.	Conclusions 255
8.	Understanding: Fragments of a Unifying Perspective <i>De Vries, Thompson and Wirtz</i>
8.1.	Introduction 257
8.2.	Modelling the Neolithic transition: a global dynamic model 258
8.2.1.	Spatial dimension: recovering effective projections of the environment 258
8.2.2.	Time dimension: socio-economic and technological evolution 259
8.2.3.	Integrating space and time: agrarianization, migration and climate change 262
8.2.4.	The computerized emergence of spatio-temporal patterns 264
8.3.	Humans and their environment: a few more modelling exercises 266
8.3.1.	Lakeland: fishing and mining strategies 266

8.3.2.	Population growth among the !Kung San	269
8.3.3.	What happened to the North American Pueblo Indians in the period 900-1300 AD?	271
8.4.	Social science perspectives on state formation and environment	273
8.5.	Perspectives on states and environment: insights into system dynamics	277
8.5.1.	About processes, mechanisms and pathologies	277
8.5.2.	The importance of interactions	280
8.5.3.	Humans and their environment as complex adaptive systems	282
8.6.	Change and complexity in socio-natural systems	283
8.6.1.	Cultural Theory and ecocycles	283
8.6.2.	Complexity in socio-natural systems: the need for requisite variety	289
8.6.3.	Cultural dynamics and environmental (mis)management: always learning, never getting it right	290
8.6.4.	Complexity and the importance of being clumsy	292
8.6.5.	Theories of change that make change permanent	296
8.7.	Conclusions	299
9.	Population and Environment in Asia since 1600 AD <i>Revi, Dronin and De Vries</i>	
9.1.	Introduction	301
9.2.	South Asia: population and environment in a geopolitical context	304
9.2.1.	Population dynamics	322
9.2.2.	Agriculture and food	326
9.2.3.	Famines	332
9.3.	Population and environment in South-East Asia – a historical view with particular reference to Sulawesi (Indonesia)	336
9.4.	Russian expansion: eastward bound	344
9.4.1.	Medieval Russia and the trade in forest products	344
9.4.2.	Muscovy Russia and the Russian Empire: extensive, not intensive growth	346
9.4.3.	Land scarcity and rural overpopulation as the motor for expansion	348
9.5.	Conclusions	351
10.	The Past 250 Years: Industrialization and Globalization <i>Goudsblom</i>	
10.1.	Early industrialization	353
10.1.1.	The meaning of industrialization	354
10.1.2.	Connections and continuities with the earlier regimes	355
10.1.3.	Origins and antecedents	355

10.1.4.	The early industrial archipelago	356
10.1.5.	Coal exploitation as intensified land use	357
10.2.	Globalization and European expansion	360
10.2.1.	European expansion as an episode in human history	360
10.2.2.	A theoretical interlude: figurational dynamics	361
10.2.3.	Agrarian expansion: sugar	362
10.3.	Accelerating expansion	364
10.3.1.	Extension and intensification of agrarian regimes	364
10.3.2.	Extension and intensification of industrial regimes	369
 11.	Back to Nature? The Punctuated History of a Natural Monument <i>Westbroek</i>	
11.1.	Introduction	379
11.2.	On a rowing boat	380
11.3.	Natural causes	383
11.4.	The impact of culture	386
11.5.	Uneasy compromise	390
11.6.	Nature	392
 12.	Conclusions: Retrospect and Prospects <i>Goudsblom and De Vries</i>	
12.1.	The discovery of the biosphere	395
12.2.	Historical and theoretical reflections	402
12.3.	Prospects	405
12.3.1.	Paradoxes of prediction	405
12.3.2.	Scenarios	407
12.3.3.	Towards a fourth regime?	411
	Notes	415
	Bibliography	423
	About the Authors	445
