Adaptive Learning by Genetic Algorithms

Analytical Results and Applications to Economical Models

Springer

Table of Contents

Preface V

1. Introduction 1

2. Bounded Rationality and Artificial Intelligence 7
2.1 Bounded Rationality in Economics 7
2.2 Artificially Intelligent Agents in Economic Systems 11
2.3 Learning Techniques of Artificially Intelligent Agents 13
2.3.1 Genetic Algorithms and Related Techniques 13
2.3.2 Classifier Systems 13
2.3.3 Neural Networks 17
2.3.4 Cellular Automata 21
2.4 Some Applications of CI Methods in Economic Systems 25
2.4.1 Bidding Strategies in Auctions 25
2.4.2 The Iterated Prisoner's Dilemma 27
2.4.3 Market Models 31
2.4.4 Further Simple Economic Models 33
2.5 Potentiality and Problems of CI Techniques in Economics ... 34

3. Genetic Algorithms 37
3.1 What are Genetic Algorithms? 37
3.2 The Structure of Genetic Algorithms 38
3.3 Genetic Operators 39
3.3.1 Selection 39
3.3.2 Crossover 41
3.3.3 Mutation 42
3.3.4 Other Operators 42
3.3.5 An Example 43
3.4 Genetic Algorithms with a Non-Standard Structure 44
3.5 Economic Interpretation of Genetic Learning 45
3.6 Some Analytical Approaches to Model Genetic Algorithms ... 49
3.6.1 The Schema Theorem 49
3.6.2 The Quantitative Genetics Approach 52
3.6.3 Markov Chain Models 54

4. Genetic Algorithms with a State Dependent Fitness Function 61
4.1 State Dependency in Economic Systems 61
4.2 A Markov Model for Systems with a State Dependent Fitness Function 62
4.3 The Difference Equations Describing the GA 67
4.4 Deviation from the Markov Process 68
4.5 A Numerical Example 72
4.6 Stability of the Uniform States 73
4.7 Two-Population Models 81

5. Genetic Learning in Evolutionary Games 87
5.1 Equilibria and Evolutionary Stability 87
5.2 Learning in Evolutionary Games 88
5.3 Learning by a Simple Genetic Algorithm 91
5.3.1 Rock-Scissors-Paper Games 92
5.3.2 A GA Deceptive Game 97
5.3.3 Learning in Non Deceptive Games 101
5.4 Two-Population Contests 104

6. Simulations with Genetic Algorithms in Economic Systems 111
6.1 A Model of a Competitive Market 111
6.1.1 Pure Quantity Decision 114
6.1.2 Exit and Entry Decisions 117
6.2 An Overlapping Generations Model with Fiat Money 122
6.2.1 Learning of Cyclical Equilibria 126
6.2.2 Learning of Sunspot Equilibria 130

7. Stability and Encoding 133
7.1 The Cobweb Example Revisited 133
7.2 Impact of a Change in Encoding and Scaling 137
7.3 A Method for Finding Economic Equilibria 139

8. Conclusions 141

A. Basic Definitions and Results Used 143
A.1 Time Homogeneous Markov Chains 143
A.2 Nonlinear Difference Equations and Stability 145

B. Calculation of the Equilibria of the Evolutionary Games in Chapter 5 147
B.1 Rock-Scissor-Paper Games 147
B.2 The GA Deceptive Game GAD 149
B.3 The Games G1 and G2 150
