<i>List of figures</i>	page x
<i>List of tables</i>	xiv
<i>Preface and acknowledgements</i>	xxi
1 Introduction	1
1.1 The fast-changing demography of England and Wales, c. 1880–1920	1
1.2 Demography, national anxiety and the 1911 census	4
1.3 A new approach to infant and child mortality – the historiographical context	8
1.4 Fertility and nuptiality – debates and description	10
1.5 Limitations of the present study	16
1.6 Summary	20
2 Locations for study	24
2.1 Introduction	24
2.2 Selecting communities for study	25
2.3 Brief histories of the thirteen locales	31
2.4 Selection of the enumeration districts within locales	47
3 Studying locations	56
3.1 From census enumerators' books to data files	56
3.2 Understanding the census variables	63
3.3 The Fertility Inquiry	85
3.4 Data analysis – some concepts	89
3.5 Data analysis – spatial or social units? The 'environments'	96
4 Infant and child mortality from the 1911 census	105
4.1 Introduction	105
4.2 Measuring infant and child mortality from the 1911 census	107

4.3	A comparison with the experience of the USA	114
4.4	The influence of environment versus social class in infant and child mortality	139
4.5	Multiple regression techniques	147
4.6	Confirming the relationships between environment, social class and infant and child mortality	149
4.7	The effects of social class and other socio-economic variables on infant and child mortality within different environments	154
4.8	Parity and infant and child mortality	160
4.9	The relative importance of variables	167
4.10	Do the influences on infant and child mortality operate through individual- or community-level characteristics?	172
4.11	Infant and child mortality differentials across time	185
4.12	Conclusions	197
5	Fertility and fertility behaviour 1891–1911	210
5.1	Introduction	210
5.2	Nuptiality	213
5.3	Calculating age-specific marital fertility rates and total marital fertility rates from census data	233
5.4	Measures of ‘stopping’ behaviour in marital fertility: M and m	249
5.5	An alternative measure of fertility – CPA	260
5.6	Retrospective histories of childbearing	268
5.7	Male occupation and fertility	289
5.8	Female occupations and fertility	299
5.9	The fertility of couples where both husband and wife returned an occupation in 1911	313
5.10	Conclusion	321
6	The national picture	337
6.1	Introduction	337
6.2	‘Environment’ at the national scale	343
6.3	National patterns of infant and child mortality	353
6.4	Nuptiality	366
6.5	The jigsaw that was national fertility in 1911	376
6.6	Conclusion	399
7	Class, place and demography: the mosaic of demographic change in England and Wales from Waterloo to the Great War	407
7.1	Environment and demographic change	407
7.2	Class, place and demography	412
7.3	Mortality in the nineteenth century from a compositional perspective	421
7.4	Decomposing fertility and reproduction	425
7.5	Conclusions	433

Appendices	441
Appendix A The indirect estimation of infant and child mortality and related applications	441
Appendix B Choice of regression method	468
Appendix C The values of community-level variables for each sector	471
Appendix D The percentage of the population of each county living in each type of place, subdivided by environment, England and Wales, 1921	474
