

# *Human choice and climate change*

VOLUME THREE  
The tools for policy analysis

EDITED BY  
Steve Rayner  
Elizabeth L. Malone

*Pacific Northwest National Laboratory*

Battelle Press

# Contents

<i>Foreword</i>	ix
The International Advisory Board	
<i>Preface</i>	xi
Gerald M. Stokes	
<i>Introduction</i>	xiii
Steve Rayner & Elizabeth Malone	
Why the concern with climate change?	xiii
Why the concern with human choice?	xiv
The conceptual architecture of this assessment	xviii
<i>Human choice and climate change, volume 1: the societal framework</i>	xx
<i>Human choice and climate change, volume 2: Resources and technology</i>	xxii
<i>Human choice and climate change, volume 3: the tools for policy analysis</i>	xxiv
<i>Human choice and climate change, volume 4: what have we learned?</i>	xxvi
References	xxvii
<b>1 <i>Economic activity and analysis</i></b>	<b>1</b>
Robin Cantor & Gary Yohe	
Historical perspective—climate, economy, and society	3
Population, economic development, and environmental constraints	6
Insights from the standard economic paradigm	15
Limitations and critiques of the standard paradigm for climate policy analysis	49
Forecasting the future	84
Conclusions	92
References	93

## CONTENTS

2	<i>Games and simulations</i>	105
	Edward A. Parson & Hugh Ward	
	Game theoretic approaches to international cooperation	106
	Simulation gaming and its applications	124
	Conclusion	134
	References	135
3	<i>Decision analysis and rational action</i>	141
	Carlo C. Jaeger, Ortwin Renn, Eugene A. Rosa, Tom Webler	
	The rational actor paradigm	145
	Global risks in a pluralistic society	177
	Social rationality and nonoptimizing choices	193
	Conclusion	204
	References	207
4	<i>Reasoning by analogy</i>	217
	William B. Meyer, Karl W. Butzer, Thomas E. Downing, B. L. Turner II, George W. Wenzel, James L. Wescoat	
	Climate, human affairs, and the human sciences	218
	Analogues illustrated: the urban climate	225
	Archaeological analogues: climate and society in prehistory	230
	Climate as hazard: vulnerability	238
	Climate as hazard: adaptation and response	259
	Climate as resource	270
	Conclusions and future research avenues	275
	References	276
5	<i>Integrated assessment modeling</i>	291
	Jan Rotmans & Hadi Dowlatabadi	
	General methods for integrated assessment	294
	Limitations and possibilities of integrated assessment models	299
	Issues to be raised by integrated assessment models of climate change	303
	Integrated assessment models	313
	Current integrated assessment modeling activities	321
	Building political credibility	340
	Major findings	346
	Integrated assessment modeling: the challenges ahead	357
	Conclusions	369
	References	370

<i>Sponsoring organizations, International Advisory Board, and project participants</i>	379
<i>Contents of Volumes 1–4</i>	384
<i>Index of names</i>	385
<i>Subject index</i>	407
