Newcastle upon Tyne NE1 7RU, UK*

Stable Isotopes

*integration of biological,
ecological and geochemical
processes*

Contents

Contributors	xi
Abbreviations and symbols	xv
Introduction	xix
Section 1. Isotope sources, analysis and interpretation of organic composition	
1. High-precision deuterium and ^{13}C measurement by continuous flow-IRMS: organic and position-specific isotope analysis <i>J.T. Brenna, H.J. Tobias and T.N. Corso</i>	1
Introduction	1
CF-IRMS analysis of HD/H_2	2
Carbon isotopes: automated position-specific isotope analysis (PSIA)	7
References	10
2. Carbon isotope effects on key reactions in plant metabolism and ^{13}C -patterns in natural compounds <i>H.-L. Schmidt and G. Gleixner</i>	13
Introduction	13
Influence of carboxylations on the initial ^{13}C distribution pattern	15
Influence of aldol reactions and decarboxylations on secondary distribution patterns	16
Ester and aldol reactions during secondary metabolism	19
Effect of other lyase reactions	20
Reactions involving C_1 -metabolism	20
Isotope effects on reactions introducing hydrogen, oxygen and nitrogen in biological compounds	22
Conclusion	23
References	23
3. Interpretation of oxygen isotope composition of leaf material <i>G.D. Farquhar, M.M. Barbour and B.K. Henry</i>	27
Why are we interested in the oxygen isotope ratio of organic matter?	27
Oxygen isotopes in plant organic matter: a historical perspective	27
On the enrichment of ^{18}O in water within the plant	29
Variation within the leaf	30
Isotopic exchange of oxygen during metabolism	33
Isotopic history of oxygen in organic molecules	36
The potential for oxygen isotopes in evaluating plant water use	41
Oxygen isotope composition of organic matter: methodology and analysis	42
References	44
Appendix 1	49
Appendix 2	60

4. Intramolecular deuterium distributions and plant growth conditions <i>J. Schleucher</i>	63
Introduction	63
Methodology	65
Variation of intramolecular D distributions	67
Discussion and outlook	70
References	72

Section 2. Soils, nutrients and plants

5. Stable isotope studies of soil nitrogen <i>D.W. Hopkins, R.E. Wheatley and D. Robinson</i>	75
Introduction	75
Transformations of soil nitrogen	76
- Distribution of soil nitrogen	77
Spatial variability of soil N	79
Use of ^{15}N natural abundance to investigate soil processes	80
Conclusions	84
References	84
6. ^{15}N at natural abundance levels in terrestrial vascular plants: a précis <i>L.L. Handley, C.M. Scrimgeour and J.A. Raven</i>	89
Introduction	89
What are the patterns in the $\delta^{15}\text{N}$ signal?	90
Experimental systems	94
Needs for research	96
References	96
7. Variations in fractionation of carbon and nitrogen isotopes in higher plants : N metabolism and partitioning in phloem and xylem <i>T. Yoneyama, H. Fujiwara and J.M. Wilson</i>	99
Introduction	99
Acquisition of nitrogen	100
Metabolism of nitrogen	101
Translocation of nitrogen	102
C and N concentration and isotope composition in castor bean (<i>Ricinus communis</i>)	103
Conclusions and future directions	106
References	106

Section 3. Photosynthesis, plants and water

8. Carbon isotope discrimination in terrestrial plants: carboxylations and decarboxylations <i>J.S. Gillon, A.M. Borland, K.G. Harwood, A. Roberts, M.S.J. Broadmeadow and H. Griffiths</i>	111
Introduction	111
Net carbon isotope discrimination	112
Photosynthetic discrimination	112
Respiratory discrimination	119
Refixation of respiratory CO_2	124

Discrimination under natural conditions	125
Conclusions	127
References	128
9. Carbon isotope discrimination in structural and non-structural carbohydrates in relation to productivity and adaptation to unfavourable conditions <i>E. Brugnoli, A. Scartazza, M. Lauteri, M.C. Monteverti and C. Mágua</i>	133
Introduction	133
Theoretical background to carbon isotope discrimination	134
WUE and plant productivity	136
Carbon isotope discrimination in soluble carbohydrates and productivity	137
Soluble carbohydrate $\Delta^{13}\text{C}$ and CO_2 mesophyll conductance	139
Concluding remarks	143
References	144
10. Oxygen-18 of leaf water: a crossroad for plant-associated isotopic signals <i>D. Yakir</i>	147
Introduction	147
Evaporative enrichment	148
Source water	150
Atmospheric moisture and boundary layers	151
Bulk leaf water	153
2-D simulation of ^{18}O in leaf water	156
^{18}O of water in chloroplasts	159
Conclusions	162
References	163
11. The role of hydrogen and oxygen stable isotopes in understanding water movement along the soil-plant-atmosphere continuum <i>T.E. Dawson, R.C. Pausch, H.M. Parker</i>	169
Introduction	169
Stable isotopes and our understanding of water movement along the soil-plant-atmospheric continuum	170
Future research on isotopes and the SPAC	179
References	180
Section 4. Integration of terrestrial ecosystems	
12. Oxygen isotope effects during CO_2 exchange: from leaf to ecosystem processes <i>L.B. Flanagan</i>	185
Introduction	185
Discrimination against $\text{C}^{18}\text{O}^{16}\text{O}$ during photosynthetic gas exchange	186
Oxygen isotope effects during respiratory CO_2 exchange	190
Relative influence of photosynthesis, respiration and turbulent fluxes on the isotope ratio of atmospheric CO_2 in plant canopies	195
Regional and global variation in the influence of terrestrial ecosystems on the oxygen isotope ratio of atmospheric CO_2	196
References	199

13. Carbon isotope discrimination of terrestrial ecosystems <i>N. Buchmann, R.J. Brooks, L.B. Flanagan and J.R. Ehleringer</i>	203
Introduction	203
Methodology	206
Variation in Δ_c estimates	210
Conclusions	215
References	218
14. Assessing sensitivity to change in desert ecosystems – a stable isotope approach <i>J.R. Ehleringer, R.D. Evans and D. Williams</i>	223
Introduction	223
Deserts as pulse-driven ecosystems	224
Water uptake patterns by aridland plants	225
Stomatal limitations as inferred from carbon isotope ratios	229
Nitrogen sources	230
Sensitivity of Colorado Plateau arid land ecosystems to invasions	231
Conclusions	233
References	234
Section 5. Integration of marine ecosystems	
15. Carbon stable isotope fractionation in marine systems: open ocean studies and laboratory studies <i>A.M. Johnston and H. Kennedy</i>	239
Introduction	239
Open ocean studies	240
Laboratory studies	246
Recommendations for future research	253
References	253
16. ^{15}N and the assimilation of nitrogen by marine phytoplankton: the past, present and future? <i>N.J.P. Owens and L.J. Watts</i>	257
Introduction	257
The past – a short historical review	259
Natural abundance v tracer studies	262
The present – methods and techniques	263
The present – a discussion of results from recent studies	267
The future – possible developments for ^{15}N studies in biological oceanography	273
Summary and conclusions	276
References	277
Section 6. The immediate past: the Holocene	
17. Archaeological reconstruction using stable isotopes <i>A.M. Pollard</i>	285
Introduction	285
Isotope archaeology	285
Dietary reconstruction using stable isotopes	289

Isotopes and human mobility	296
Summary	297
References	298
18. Stable isotopes in tree ring cellulose	
<i>R. Switsur and J. Waterhouse</i>	303
Introduction	303
Atmospheric carbon dioxide and carbon stable isotope ratios	304
Hydrogen and oxygen stable isotope ratios	309
References	316
Section 7. Palaeoclimatic reconstructions from Precambrian to Quaternary	
19. Phylogeny, palaeoatmospheres and the evolution of phototrophy	
<i>J.A. Raven</i>	323
Introduction	323
The phylogeny of O ₂ -producing phototrophs and their carboxylases	323
Timing of origin of taxa of O ₂ -evolving phototrophs in relation to changes in atmospheric composition	327
The contribution of ¹³ C/ ¹² C measurements to our understanding of the evolution of phototrophy	334
Is the ¹³ CO ₂ / ¹² CO ₂ discrimination factor of RUBISCO subject to direct natural selection?	339
Conclusions and prospects	340
References	341
20. Modelling changes in land plant function over the Phanerozoic	
<i>D.J. Beerling and F.I. Woodward</i>	347
Introduction	347
Atmospheric evolution	347
Phanerozoic changes in leaf function	349
Terrestrial productivity in the Carboniferous	350
Global patterns of leaf carbon isotope composition	357
Concluding remarks	359
References	359
21. Carbon isotopes, diets of North American equids, and the evolution of North American C₄ grasslands	
<i>T.E. Cerling, J.M. Harris and B.J. McFadden</i>	363
Introduction	363
Sampling protocol and sources of material	365
Transition to C ₄ diet in equids: occurrence of C ₄ -dominated diets, hypsodonty, and the radiation of equid genera	365
Geographical and temporal distribution of C ₄ grasses in North America	368
Regional patterns and variations	369
History of C ₄ grasses versus C ₃ grasslands in North America	373
Equid diversity during the Neogene	373
Global expansion of C ₄ ecosystems	376
Summary and implications	376
References	377

22. Carbon isotopes in lake sediments and peats of last glacial age: implications for the global carbon cycle	
<i>F.A. Street-Perrott, Y. Huang, R.A. Perrott and G. Eglinton</i>	381
Introduction	381
The carbon cycle at the LGM	382
Carbon-isotope data on total organic matter from lake sediments and peats	385
Molecular-isotopic analyses: a case study from Sacred Lake, Mt. Kenya	387
Influence of source carbon, fractionation and transformation on ^{13}C record of last glaciation	388
Conclusions	392
References	392
Section 8. Climate change, the hydrological cycle and atmospheric processes	
23. Stable isotopes, the hydrological cycle and the terrestrial biosphere	
<i>J.R. Gat</i>	397
Introduction	397
Hydrological processes at the land/atmosphere interface	398
The isotope signature imposed by processes at the surface on the hydrological cycle	399
The effect of the plant cover on the hydrological cycle	402
Conclusions	404
References	405
24. The $^{18}\text{O}/^{16}\text{O}$ isotope ratio of atmospheric CO_2 and its role in global carbon cycle research	
<i>P. Ciais and H.A.J. Meijer</i>	409
General introduction and outline	409
The $^{18}\text{O}/^{16}\text{O}$ isotope ratio of atmospheric CO_2 : basic features	412
A very simple model for the concentration, the $\delta^{13}\text{C}$ and the $\delta^{18}\text{O}$ of atmospheric CO_2	415
Towards a realistic model of $\delta^{18}\text{O}$ in atmospheric CO_2 : calculation of the surface fluxes	419
Results and discussion of 3D model	423
Conclusions	427
References	428
Index	433
