Modern Spectrum Analysis of Time Series

Contents

Chapter One

Stochastic Characterization of Time Series	1
1.1 Time Series as a Stochastic Process	1
1.2 A Review of Stochastic Process	4
1.3 Stationary Stochastic Process: Second Order	12
1.4 Spectral Representation	26
1.5 Stationary Stochastic Process: Third Order	31
1.6 Vector Stochastic Process	41
1.7 Nonstationary Process	48
1.8 Exercises	61
References	67

Chapter Two

Mathematical Models of Time Series	71
2.1 Time Series Models	71
2.2 Filter Model	72
2.3 Discrete Fourier Transform (DFT)	80
2.4 Parametric Models: MA/AR	93
2.5 Parametric Models: ARMA	109
2.6 Parametric Bispectral Model	130
2.7 Deterministic Chaos	141
2.8 Exercises	152
References	156

Chapter Three

Spectrum Estimation: <i>Low-Resolution Methods</i>	161
3.1 An Overview	161
3.2 Covariance Function	162
3.3 Estimation of Spectrum and Cross-Spectrum	173
3.4 Estimation of Coherence	195
3.5 Spectrum of Window Function	203
3.6 Estimation of Bicovariance and Bispectrum	215
3.7 Estimation of Time Varying Spectrum	222
3.8 Exercises	233
References	236

Chapter Four

Spectrum Estimation: <i>High-Resolution Methods</i>	241
4.1 An Overview	241
4.2 Maximum Likelihood (ML) Spectrum	243
4.3 Maximum Entropy (ME) Spectrum	259
4.4 Parametric Spectrum	276
4.5 Subspace Methods	288
4.6 Nonlinear Transformation	317
4.7 Extrapolation of Band-Limited Time Series	323
4.8 Exercises	328
References	333

Chapter Five

Spectrum Estimation: <i>Data Adaptive Approach.</i>	337
5.1 Data Adaptive Approach	337
5.2 Prewhitening	350
5.3 Burg Spectrum	354
5.4 Data Matrix and Singular Value Decomposition (SVD)	377
5.5 Adaptive Subspace	385
5.6 Exercises	388
References	389

Index	393
