4th European Symposium

on

Aerothermodynamics for Space Vehicles

15-18 October 2001

Capua, Italy

Organised by ESA, CIRA and ASI

Co-sponsors: CNES, ONERA and DLR

European Space Agency Agence spatiale européenne

Contents

Welcome and Opening Session

Chair: F. Felici & F. Rossi

Introduction and W	Velcome	 	 	 	 	 	 	• • •	 	 3
S. Vetrella										
Opening Address		 	 	 	 	 	 		 	 5

C. Stavrinidis

Plenary Session I

Chair: C. Stavrinidis

Aerothermodynamics in Europe: ESA Achievements and Challenges	i 1
Aerothermodynamic Research Activities at University "Federico II" in support	25
D M SCHOCCO Flogram	
R. Monti	

Plenary Session II

Chair: P. Eymar & R. Piva

The PRORA-USV Program	.37
The Technology Program in Aerothermodynamics for PRORA USV	.49

Plenary Session III

Chair: R. Monti

On the Use of Industrial CFD for Design <i>M. Pollet</i>	
Aerothermodynamics - A Critical Review J. Longo	

Plenary Session IV Chair: M. Caporicci

Researches of Hypersonic Propulsion in Central Institute of Aviation Motors
Unsteadiness and Side Loads in Over-expanded Supersonic Nozzles
X-38 Experimental and CFD Analysis in Subsonic Flight Regime

Session 1A Physics and Chemistry of High speed Flows Chair: M. Capitelli & D. Zeitoun

Nonequilibrium Molecular Radiation near a Space Vehicle at the Martian Atmosphere Entry
Effect of Different Heterogeneous Recombination Mechanisms on Heat Fluxes
State-to-state Kinetics and Transport Properties in Supersonic Air Nozzle Flows
Non-equilibrium Dissociation Rates in Shock Heated Gases
Comparative Investigation of the Multigroup Optical Models for the Radiation
Modelling of Physical and Chemical Processes in Thermally Non-equilibrium Gases

Session 1B System Configuration and CFD Configurational Analysis Chair: M. Pandolfi and J.-P. Tribot

Winged Means of Recovery and Return to the Earth
Investigations of Lifting Bodies, Waveriders, and Inlets with Convergent Compression Surfaces175 Y. Goonko et al.
Preliminary Aerodynamic Performances of the Prora-USV Experimental Vehicle

Numerical Analysis of the Supersonic Flow Around Reusable Space Transportation Vehicles	L
ELAC: A Case Study for High Speed Transportaion)
Preliminary Computational Investigation on Aerodynamic Phenomena	7

Session 2A High Enthalpy Facilities and Associated Numerical Analysis Chair: S. Borrelli & J.C. Traineau

Flowfield Measurements in the New Hypersonic Wind Tunnel AT-303 Based at ITAM SB RAS
Methodology of Heat Transfer Investigation Around Martian Vehicle in Short-Duration Wind Tunnel225 <i>V. Borovoy et al.</i>
Aerothermodynamics of a Winged Reentry Vehicle in Hypersonic Flow
Investigation of the ARD Aerothermodynamics at DLR: An Overview
High Enthalpy Testing and CFD Rebuilding of X-38 in HEGHeGHeGK. Hannemann et al.
Realization of Data Base on Kinetic Characteristics of High-Temperature Gas Mixture

S. Losev et al.

Session 2B Planetary Entry Vehicle Design and Verification Chair: M. Pollet & J-M. Charbonnier

Convective and Radiative Heating of a Martian Space Vehicle Base Surface	5
Aerothermodynamic Environment of the Beagle 2 Entry Capsule	l
Simulation of Flight Conditions in Martian Atmosphere in Low Density Transonic Wind Tunnel	3
Earth Entry of the Vehicle with the Mars Ground Samples)

Session 3A Aerodynamics of Jettisoning of Nose Fairing, System Configuration Chair: M. Ivanov & P. Bakker

Aerodynamic Effects on Spacecraft During Head Fairing Jettisoning in Dense Atmosphere Layers299 A. Beloshitsky et al.
Numerical Modeling and Experimental Data Analysis of the Flow Near Spacecraft
The Flight Measurements of Aerodynamic Influences to "Progress-M" Spacecraft
Experimental Investigation of Pressure Fluctuations on the Progress Spacecraft
The Problem of Adverse Consequences of Space Vehicles Falls on Earth Surface

Session 3B Shock Interactions/CFD Validation/Plume Flows Chair: M. Marini & W. Kordulla

lew Experimental and Numerical Results on Transition	
Calculation of Flows Characterized by Extensive Cross Flow Separation)
Comparative Multidisciplinary Analysis of Vehicles Intended for Descent on	l
erothermodynamics of Brazilian Reusable Satellite	3
Iumerical and Experimental Investigation of Interacting Plumes 38 Chirokov et al. 38	l

Session 4A Propulsion Aerothermodynamics/Nozzle Flows

Chair: M. Onofri & R. Schwane

Computational Flow Simulations of Overexpanded Rocket Nozzle Flowfields
Numerical Investigation of Transient Nozzle Flow
Semi-Empirical Flow Separation Model for Subscale Nozzles
Correlation between Outer Flow and Internal Nozzle Pressure Fluctuations
Numerical Investigation of Transition in Flow Separation in a Dual-bell Nozzle
Influence of the Thermic Boundary conditions on the High Speed Impulsive Flow

Session 4B Flight Testing and Measurement Techniques Chair: R. Hillier & F. Felici

EXPERT: European Experimental Reentry Test Bed	13
Flight Experiments to address Unsolved Aerothermodynamics Issues	51
RAFLEX-an Air Data System for Re-entry Vehicles	57
Thermal and Aerodynamic Experimental testing for Full Scale Models of	55

Session 5A Plasmatron Facilities and Measurement Techniques Chair: G. Tumino & D. Devezeaux

An Experimental Study of Stagnation Point Heat Transfer from High-Enthalpy
Comparative Study of Surface Catalycity under Subsonic Air Test Conditions
Investigations in Plasmatron Facilities on Catalicity Determination
Recombination Coefficient of Atomic Oxygen on Silica Surfaces at High Temperature:
Assessment of Radiative Transport in an Argon Plasma Flow
Extended Possibilities for Simulating Re-entry Conditions of Space Vehicle in HF-Plasmatron

Session 5B

Computational Fluid Dynamics use for Design and Methods Chair: J. Longo & R. Molina

Numerical Analysis of the ARD Capsule in S4 Wind Tunnel	23
Thermal Loads for the Experimental Vehicle X-38	29
The Accelerated Method of Global Iterations for Solving the External and	37

V. Knotko et al.

Session 6A

Propulsion Aerothermodynamics/Base Flow Jet Interaction

Chair: S. Radulovic & J.L. Verant

Aerothermodynamcis Issues for Future Liquid Rocket-Engine Nozzles 555 Ph. Reijasse et al.
Aerogasdynamic Loads on Deflected Launch Vehicle Nozzles
Computational Study of a Plume-induced Flow Separation on a Boat-tailed Afterbody
Experimental Investigation of Base Pressure with Hot Supersonic Jet for External Supersonic Flow 579 <i>Zapryagaev et al.</i>
Prediction of Open and Closed Wake in Plug Nozzles
Numerical Computations on Linear Plug Nozzle with VTEC Afterbodies

Session 6B

Propulsion Aerothermodynamics/Facilities/Hot Firings/Scram Chair: C. Bruno & G. Hagemann

Experimental Investigation of Shock Wave Structure and Streamwise Vortices in Supersonic Jet603 V. Zapryagaev et al.
Rocket Nozzle Cold Gas Test Campaigns for Plume Investigations
Scalability Discussion for Rocket Nozzle Flows Based on Subscale and Full-Scale Testing
CryoROC - a Multi-Phase Navier-Stokes Solver for Advanced Rocket Thrust Chamber Design
Feasibility Study of a Hot Plume Test Facility
Scirocco Air-Breathing Propulsion Simulation Tests

Session 7A Plasma Facilities and Simulation

,

Chair: D. Vennemann & M. Auweter-Kurtz

Fround Testing Facilities for TPS Qualification at the Institut für Raumfahrt Systeme
Mars Entry Simulation in the Arc Heated Facility L2K
Numerical and Experimental Analysis of Surface Catalycity Effects for Martian Atmosphere Entry673 D. Paterna et al.
Scirocco Final Tests Measured Data: Comparison Between Theory and Experiments
Qualification of Heat Flux Sensors in High Enthalpy Flows 689 B. Esser et al. 689

Session 7B Shock Interactions/CFD Validation/Plume Flows

Chair: W. Schroeder & H. De Coninck

Real Gas Effects on Blunt Cone/Flare Configurations
Compressibility Effects in Weakly Turbulent Hypersonic Flow Fields
Numerical/Experimental Investigation of a Wedge-Compression Corner with
Transitional Shock Wave-Boundary Layer Interaction
A Study on Shock Wave-Boundary Layer Interactions in High-Speed Flows
Numerical Simulation of Growing Disturbances

Round Table and Closing Session Chair: F. Rossi (ASI)
