

ADAPTIVE OPTICS *for* ASTRONOMICAL TELESCOPES

JOHN W. HARDY

New York Oxford
Oxford University Press
1998

Contents

List of Symbols	ix		
1	The Short, Eventful History of Adaptive Optics	3	
1.1	Introduction	3	
1.2	Astronomy with the Unaided Eye	4	
1.3	Telescopes and Atmospheric Turbulence	8	
1.4	The Emergence of Astrophysics	10	
1.5	The Importance of Optical Wavefront Measurements	11	
1.6	Early Ideas on Wavefront Compensation	12	
1.7	The Development of Laser Beam Control Systems	15	
1.8	First Successes with Image Compensation	16	
1.9	The Evolution of Large Adaptive Optics Systems	20	
1.10	The Next Generation of Adaptive Optics	24	
2	Adaptive Optics in Astronomy	26	
2.1	Introduction	26	
2.2	Observing Through the Atmosphere	27	
2.3	The Role of Adaptive Optics	32	
2.4	Performance Gain with Adaptive Optics	40	
2.5	Optical Considerations	47	
2.6	Implementation of Adaptive Optics	55	
2.7	Wavefront Sensing	61	
2.8	Wavefront Correction	67	
2.9	Laser Beacons	70	
2.10	Error Sources in Adaptive Optics	72	
2.11	Using Adaptive Optics	73	
3	Optical Effects of Atmospheric Turbulence	77	
3.1	Introduction	77	
3.2	The Mechanics of Turbulence	78	
3.3	Modeling Earth's Atmosphere	82	
3.4	Optical Effects of Turbulence	88	
3.5	Modal Representation and Correction of Turbulence	95	
3.6	Transverse Filtering Techniques	98	
3.7	Anisoplanatism	101	
4	Optical Image Structure	104	
4.1	Introduction	104	
4.2	Optical Image Formation	106	
4.3	Wavefront Distortion	112	
4.4	Turbulence-Degraded Images	115	
4.5	Image Motion	121	
4.6	Image Evaluation	122	
4.7	Quantum Noise Effects	125	
4.8	Performance Criteria	131	

5	Optical Wavefront Sensors	135	
5.1	Sensors for Astronomical Adaptive Optics	135	
5.2	Wavefront Sensing Techniques	138	
5.3	Shack-Hartmann Sensor	143	
5.4	Shearing Interferometers	154	
5.5	Curvature Sensing	165	
5.6	Wavefront Sensing with Extended Sources	168	
5.7	Photon Detectors for Wavefront Sensing	170	
5.8	Neural Networks	174	
6	Wavefront Correctors	176	
6.1	Introduction	176	
6.2	Wavefront Correctors for Astronomy	177	
6.3	Actuators	179	
6.4	Discrete-Actuator Deformable Mirrors	186	
6.5	Segmented Mirrors	192	
6.6	Bimorph Mirrors	197	
6.7	Adaptive Secondary Mirrors	201	
6.8	Membrane Mirrors	204	
6.9	Refractive Wavefront Correctors	206	
6.10	Tracking Mirrors	210	
6.11	Dirigible Optics	212	
7	Laser Beacons	216	
7.1	Introduction	216	
7.2	Physical Principles of Laser Scattering	221	
7.3	Wavefront Measurement with Atmospheric Beacons	230	
7.4	Image Stabilization	248	
7.5	Rayleigh Beacon Lasers	256	
7.6	Sodium Beacon Lasers	257	
7.7	Sodium Beacon Measurements	263	
7.8	Optical Configurations for Beam Sharing	264	
7.9	Laser Safety Considerations	265	
8	Wavefront Reconstruction and Control Systems	266	
8.1	Introduction	266	
8.2	Principles of Wavefront Reconstruction	271	
8.3	Practical Reconstructors	280	
8.4	Wavefront Prediction	287	
8.5	Adaptive Optics Control Systems	289	
8.6	Optimal Wavefront Correction	303	
9	Adaptive Optics Performance Analysis and Optimization	308	
9.1	Introduction	308	
9.2	Atmospheric Turbulence Summary	314	
9.3	External Sources of Wavefront Error	318	
9.4	Instrumental Error Sources	328	
9.5	Performance of Adaptive Optics Systems Using Natural Stars	345	
9.6	Performance of Laser Beacon Systems	357	
9.7	Adaptive Parameter Control	369	
9.8	Multiconjugate Compensation	374	
10	Astronomical Adaptive Optics Programs	377	
10.1	Introduction	377	
10.2	Adaptive Optics Programs	378	
10.3	Program Descriptions	379	
10.4	Current Trends	393	
10.5	Future Prospects	394	
Appendix A Estimating the Position of an Image 395			
A.1	Introduction	395	
A.2	General Position Estimator	395	
A.3	Position Sensing with Discrete Detector Arrays	396	
A.4	Optimum Weighting Functions	397	
A.5	Performance of Hartmann Sensors	397	
Appendix B Active Control for Long-Baseline Interferometers 404			
B.1	Introduction	404	
B.2	System Model	404	
B.3	Active Control System	409	
B.4	Summary	412	
Bibliography 413			
Index 431
