KIMBERLITES, ORANGEITES, AND RELATED ROCKS

Roger Howard Mitchell

*Lakehead University
Thunder Bay, Ontario
Canada*

PLENUM PRESS • NEW YORK AND LONDON

CONTENTS

Chapter 1. Kimberlites and Orangeites	1
1.1. Etymology of Group I and II Kimberlites	1
1.2. Definitions of Cryptogenic and Primary Phases	5
1.3. The Hybrid Nature of Kimberlites and Orangeites	5
1.4. Philosophy and Principles of Classification	7
1.4.1. Modal versus Genetic Classifications	7
1.4.2. Petrological Clans	8
1.4.3. The Lamprophyre Clan	9
1.4.4. Mineralogical–Genetic Nomenclature within Petrological Clans	10
1.5. Mineralogical Comparisons between Kimberlites and Orangeites	11
1.6. Definitions of Orangeites and Kimberlites	14
1.6.1. Orangeites	14
1.6.2. Kimberlites	14
1.7. Age and Distribution of Orangeites	16
1.8. Occurrences of Orangeites	18
1.8.1. Finsch	18
1.8.2. Barkly West Region	21
1.8.2.1. Bellsbank	21
1.8.2.2. Sover	25
1.8.2.3. Newlands	27
1.8.2.4. Pniel	27
1.8.3. Boshof District	27
1.8.3.1. Roberts Victor	28
1.8.3.2. New Elands	28
1.8.4. Winburg District	28
1.8.5. Kroonstad District	29
1.8.6. Swartruggens District	30
1.8.7. Dokolwayo	31
1.8.8. Prieska District	32
1.8.9. Summary	35

1.9. Textural–Genetic Classifications of Petrological Clans	35
1.9.1. Kimberlites	37
1.9.1.1. Crater Facies	37
1.9.1.2. Diatreme Facies	41
1.9.1.3. Hypabyssal Facies	48
1.9.1.4. Spatial Relationships between Diatreme and Hypabyssal Facies Kimberlites	51
1.9.2. Orangeites	58
1.9.3. Melilitite Clan	58
1.10. Petrographic Characteristics of Orangeite	60
1.11. Petrographic Differences with Respect to Kimberlites	74
1.12. Petrographic Differences with Respect to Lamproites	79
 Chapter 2. Mineralogy of Orangeites	 91
2.1. Mica	91
2.1.1. Paragenesis	91
2.1.2. Composition of Primary Mica	94
2.1.2.1. Al_2O_3 – TiO_2 Variation	97
2.1.2.2. Al_2O_3 – FeO_T Variation	104
2.1.2.3. Macrocrysts versus Microphenocrysts	109
2.1.2.4. Minor Elements	111
2.1.2.5. Trace Elements	114
2.1.3. Aluminous Mica—Microxenoliths	115
2.1.4. Aluminous Biotite Macrocrysts	117
2.1.5. Micas from the Swartruggens Male Lamprophyre	118
2.1.6. Summary of Mica Compositional Variation	119
2.1.7. Solid Solutions in Orangeite Mica	122
2.1.8. Mica in Kimberlites	126
2.1.8.1. Macrocrysts	127
2.1.8.2. Primary Micas	128
2.1.8.3. Summary of Kimberlite Mica Compositional Variation	155
2.1.9. Mica in Lamproites	157
2.1.10. Mica in Minettes	160
2.1.11. Mica in Ultramafic Lamprophyres	161
2.2. Clinopyroxene	166
2.2.1. Paragenesis	166
2.2.2. Composition	166
2.2.2.1. Diopside	166
2.2.2.2. Titanian Aegirine	171
2.2.2.3. Minor Elements	172
2.2.3. Pyroxenes in the Swartruggens Male Lamprophyre	176
2.2.4. Megacrystal Pyroxenes	177

2.2.5. Comparison with Pyroxenes in Kimberlites	178
2.2.6. Comparisons with Pyroxenes in Lamproites	179
2.2.7. Comparisons with Pyroxenes in Ultramafic Lamprophyres	180
2.2.8. Comparisons with Pyroxenes from Minettes	181
2.3. Olivine	181
2.3.1. Paragenesis	181
2.3.2. Composition	183
2.3.3. Comparisons with Olivines in Kimberlites	185
2.3.4. Comparisons with Olivines in Lamproites	187
2.4. Spinel	188
2.4.1. Paragenesis	188
2.4.2. Composition	189
2.4.3. Comparisons with Kimberlite Spinel	195
2.4.4. Spinel Compositional Variation in Lamproites and Lamprophyres	198
2.5. Potassium Barium Titanates	200
2.5.1. Hollandite	200
2.5.1.1. Paragenesis	200
2.5.1.2. Composition	201
2.5.1.3. Comparison with Hollandites from Lamproites, Kimberlites, and Other Potassic Rocks	207
2.5.2. Potassium Triskaidecatitanate	213
2.5.3. Barium Pentatitanate	216
2.6. Perovskite	216
2.6.1. Paragenesis	216
2.6.2. Composition	218
2.6.3. Comparison with Perovskites from Kimberlite	221
2.6.4. Comparison with Lamproite Perovskite	223
2.7. Phosphates	225
2.7.1. Apatite	225
2.7.1.1. Paragenesis	225
2.7.1.2. Composition	225
2.7.1.3. Comparison with Kimberlite and Lamproite Apatite	225
2.7.2. Daqingshanite	227
2.7.3. Monazite	228
2.7.4. Sr-REE Phosphate	229
2.8. Amphiboles—Potassium Richterite	229
2.8.1. Paragenesis	229
2.8.2. Composition	230
2.8.3. Comparison with Potassium Richterite in Lamproite and Other Potassic Rocks	233
2.9. Potassium Feldspar	235
2.10. Ilmenite	237

2.10.1. Comparison with Groundmass Ilmenites from Kimberlites	240
2.10.2. Comparison with Ilmenites in Lamproites	241
2.11. Rutile	241
2.12. Zirconium Silicates	243
2.12.1. Zircon	243
2.12.2. Wadeite	243
2.12.3. Zirconium-Bearing Garnet	244
2.12.4. Calcium Zirconium Silicate	245
2.13. Carbonates	245
2.13.1. Calcite	245
2.13.2. Dolomite	245
2.13.3. Other Carbonates	246
2.14. Other Minerals	247
2.15. Summary	247
 Chapter 3. Geochemistry of Orangeites	 249
3.1. Contamination and Alteration	250
3.2. Primary Magma Compositions	252
3.3. Major Element Geochemistry	252
3.3.1. Unevolved Orangeites	253
3.3.2. Mineralogical Controls on the Major Element Geochemistry	255
3.3.3. Evolved Orangeites	257
3.3.4. Comparison with Kimberlites	258
3.3.5. Comparison with Lamproites	261
3.4. First-Period Transition Elements	262
3.5. Incompatible Elements	264
3.5.1. Alkaline Earths	265
3.5.2. Second- and Third-Period Transition Elements	265
3.5.2.1. Zirconium and Hafnium	265
3.5.2.2. Niobium and Tantalum	268
3.5.3. Thorium and Uranium	271
3.5.4. Rare Earth Elements	272
3.5.5. Alkali Elements	277
3.5.6. Lead	279
3.6. Inter-Element Relationships	280
3.6.1. Extended Incompatible Element Distribution Diagrams	280
3.6.2. Ce/Y and La/Yb versus Zr/Nb	286
3.7. Peridotite Mixing and Assimilation	288
3.8. Radiogenic Isotopes	292
3.8.1. Strontium and Neodymium	292
3.8.2. Lead	296

3.9. Stable Isotopes	298
3.10. Summary	301

Chapter 4. Petrogenesis of Orangeites and Kimberlites 303

4.1. Geochemical Models of Orangeite Petrogenesis Involving Limited Partial Melting of Lherzolitic Sources	304
4.1.1. Earlier Hypotheses	304
4.1.2. Melting of Enriched Mantle and Peridotite Entrainment	305
4.1.3. Three-Stage Processes—Depletion, Enrichment, and Melting	306
4.2. Experimental Evidence Pertaining to Orangeite Petrogenesis	310
4.2.1. Liquidus Experiments on Orangeite Compositions	310
4.2.2. Liquidus Experiments on Lamproite Compositions	311
4.2.3. Melting of Mica Pyroxenites	312
4.2.4. Phase Relations in the System: Phlogopite–Potassium Richterite–Apatite	314
4.3. Petrogenesis of Archetypal Kimberlites—Recent Hypotheses	315
4.3.1. Carbonated Lherzolite Sources	315
4.3.1.1. Volatile Fluxing—Diapiric Model	317
4.3.1.2. Partial Melting of Magnesite Peridotite	320
4.3.1.3. Partial Melting of Carbonated Phlogopite Lherzolite	322
4.3.1.4. Carbonates in the Mantle?	323
4.3.2. Liquidus Experimental Studies at High Pressures	325
4.3.2.1. Liquidus Studies of Natural Kimberlite	325
4.3.2.2. Liquidus Studies of Synthetic Kimberlite	327
4.3.2.3. Summary—A Cautionary Note	329
4.4. Geodynamic Models of Kimberlite and Orangeite Genesis	329
4.4.1. Transition Zone Melting	331
4.4.2. Metasome Melting and Mantle Plumes	333
4.4.3. Hot-Spot Melting	335
4.4.4. Partial Melting of Heterogeneous Lithosphere	338
4.4.5. Redox Melting	341
4.5. Petrogenesis of the Orangeite Clan	343
4.5.1. Development of the Source	344
4.5.1.1. Continental Roots	345
4.5.1.2. Depth of Origin of Orangeite Magmas	346
4.5.1.3. Compositional Heterogeneities—Veined Harzburgites	348
4.5.2. Melting of the Source	351
4.5.2.1. Causes of Melting	352
4.5.2.2. Melting of Veined Lithosphere	358
4.5.3. Melt Segregation, Contamination, and Ascent	362

4.5.4. Low-Pressure and Post-Emplacement Crystallization . .	364
4.5.5. Summary	366
4.6. Petrogenesis of the Kimberlite Clan	366
4.6.1. Nature of the Source and Depth of Melting	367
4.6.2. The Megacryst Problem	370
4.6.3. Contamination of Kimberlites in the Mantle	371
4.6.4. Post-Emplacement Crystallization	373
4.6.5. Summary	373
4.7. Relationships of Orangeites to Kimberlites, Lamproites, and Other Ultrapotassic Magmas	375
4.7.1. Kimberlites	375
4.7.2. Lamproites	376
4.7.3. Other Ultrapotassic Magmas	377
4.7.4. Summary	380
4.8. Primary Diamond Deposits	380
