

# Remote Sensing from Air and Space

**R. C. Olsen**

**SPIE  
PRESS**

Bellingham, Washington USA

# Contents

<b>Preface</b>	<b>xiii</b>
<b>Chapter 1 Introduction to Remote Sensing</b>	<b>1</b>
1.1 Order of Battle	2
1.1.1 Air order of battle	3
1.1.2 Electronic order of battle	3
1.1.3 Space order of battle	7
1.1.4 Naval order of battle	8
1.2 Imagery Survey	9
1.2.1 Visible	9
1.2.1.1 GOES, whole Earth	9
1.2.1.2 DMSP (0.5 km), Earth at night	10
1.2.1.3 UoSAT (100m), San Francisco	11
1.2.1.4 Landsat 5 (30m), San Diego	13
1.2.1.5 Astronaut photography	13
1.2.1.6 SPOT (10 m)	15
1.2.1.7 IRS (5 m)	17
1.2.1.8 IKONOS—San Diego/Coronado Island	17
1.2.1.9 High-resolution airborne imagery	19
1.2.2 Infrared (IR)	20
1.2.2.1 GOES 9	21
1.2.2.2 Landsat—IR San Diego	22
1.2.2.3 DMSP—IR and microwave	23
1.2.3 Radar (SAR)	24
1.2.3.1 RADARSAT, Maui and the airport	24
1.2.3.2 SIRC—Multi-wavelength/polarization	26
1.2.3.2.1 Maui	26
1.2.3.2.2 SIRC, San Diego Harbor	26
1.3 Three Axes	26
1.4 Resources	28
1.5 Problems	29

<b>Chapter 2</b>	<b>Electromagnetic Basics</b>	<b>33</b>
2.1	The Electromagnetic Spectrum	33
2.1.1	Maxwell's equations	33
2.2	Polarization of Radiation	35
2.3	Energy in Electromagnetic Waves	35
2.3.1	Photoelectric effect	38
2.3.2	Photomultiplier tubes	39
2.4	Sources of Electromagnetic Radiation	41
2.4.1	Line spectra	42
2.4.2	Blackbody radiation	45
2.5	Electromagnetic Radiation (EMR)–Matter Interactions	48
2.5.1	Transmission	49
2.5.2	Reflection	50
2.5.3	Scattering	51
2.5.4	Absorption	52
2.6	Problems	53
<b>Chapter 3</b>	<b>Visible Imagery</b>	<b>55</b>
3.1	The First Remote Sensing Satellite: Corona	55
3.1.1	A little history	55
3.1.2	The technology	56
3.1.3	Some illustrations	59
3.2	Atmospheric Absorption, Scattering, and Turbulence	63
3.2.1	Atmospheric absorption: wavelength dependence	63
3.2.2	Atmospheric scattering	64
3.2.3	Atmospheric turbulence	66
3.3	Basic Geometrical Optics	67
3.3.1	Focal length/geometry	67
3.3.2	Optical diagram: similar triangles, magnification	68
3.3.3	Aperture ( $f$ /stop)	69
3.3.4	Image formation by lens or pinhole	69
3.4	Diffraction Limits: the Rayleigh Criterion	70
3.5	Detectors	73
3.5.1	Film	74
3.5.2	Solid state	74
3.5.3	Focal plane arrays	78
3.5.4	Uncooled focal planes: Microbolometers	79
3.6	Imaging System Types	80
3.6.1	Framing systems—mostly film systems (Corona)	80
3.6.2	Scanning systems	80
3.6.2.1	Cross track (Landsat MSS, TM; AVIRIS)	80
3.6.2.2	Along track (SPOT HRV)	81
3.7	Hubble: The Big Telescope	82
3.7.1	The Hubble satellite	82

3.7.2	The repair missions	84
3.7.3	Operating constraints	86
3.7.3.1	South Atlantic anomaly	86
3.7.3.2	Spacecraft position in orbit	86
3.7.4	The telescope itself	86
3.7.5	Detectors—Wide Field and Planetary Camera 2	88
3.7.5.1	Example: Diffraction and resolution limits	90
3.7.5.1.1	Rayleigh criteria	90
3.7.5.1.2	Geometric resolution	92
3.8	Commercial Remote Sensing—IKONOS and Quickbird	92
3.8.1	IKONOS	95
3.8.1.1	Imaging sensors and electronics for the IKONOS satellite	95
3.8.1.1.1	Camera telescope	95
3.8.1.1.2	Imaging sensors & electronics	96
3.8.2	NOB with IKONOS: Severodvinsk	97
3.9	DMSP: Visible Sensor, Earth at Night	98
3.10	Exposure Times	99
3.11	Problems	101
<b>Chapter 4</b>	<b>Orbital Mechanics Interlude</b>	<b>103</b>
4.1	Gravitational Force	103
4.2	Circular Motion	104
4.2.1	Equations of motion	104
4.2.1.1	Example: A car is going around in a circle of 200 m radius at 36 km/hr. What is $\omega$ ?	104
4.2.1.2	Example: A satellite is going around the Earth once every 90 minutes. What is $\omega$ ?	105
4.2.2	Centripetal force	105
4.3	Satellite Motion	105
4.4	Kepler's Laws	106
4.4.1	Elliptical orbits	106
4.4.2	Equal areas swept out in equal times	107
4.4.3	Orbital period: $\tau^2 \propto \rho^3$	108
4.5	Orbital Elements	108
4.5.1	Semi-major axis: $a$	108
4.5.2	Eccentricity: $e$ or $\epsilon$	108
4.5.3	Inclination angle: $I$	108
4.5.4	Right ascension of the ascending node: $\Omega$	109
4.5.5	Closest point of approach (argument of perigee): $\omega$	109
4.6	A Few Standard Orbits	109
4.6.1	Low Earth orbit (LEO)	110
4.6.2	Medium Earth orbit (MEO)	111
4.6.3	Geosynchronous orbit (GEO)	111

4.6.4	Molniya orbit (HEO)	113
4.6.5	Summary table—illustrations	114
4.7	Problems	115

<b>Chapter 5</b>	<b>EO—Spectral Imagery</b>	<b>117</b>
5.1	Reflectance of Materials	117
5.2	Human Visual Response	118
5.3	Landsat	120
5.3.1	Orbit	121
5.3.2	Sensor: Thematic mapper	122
5.3.2.1	Optics	122
5.3.2.2	Focal planes	124
5.3.2.2.1	Prime focal plane	124
5.3.2.2.2	Cold focal plane	125
5.3.2.2.3	Spectral response	125
5.3.2.3	Spatial resolution—swath	126
5.3.2.4	Dynamic range	127
5.3.2.5	Data links	127
5.4	<i>Systeme Probatoire d'Observation de la Terre</i> (SPOT)	128
5.4.1	HRV sensor, pan/spectral—both 60-km swath	130
5.4.1.1	Imaging modes—spatial and spectral resolution	130
5.5	Spectral Responses for the Commercial Systems	131
5.6	Imaging Spectroscopy	132
5.6.1	AVIRIS	132
5.6.2	Hyperion	133
5.6.3	MightySat II—FTHSI	135
5.7	Problems	136
<b>Chapter 6</b>	<b>Image Analysis</b>	<b>137</b>
6.1	Interpretation Keys (elements of recognition)	137
6.1.1	Shape	137
6.1.2	Size	138
6.1.3	Shadow	138
6.1.4	Height (depth)	138
6.1.5	Tone or color	138
6.1.6	Texture	139
6.1.7	Pattern	139
6.1.8	Association	140
6.1.9	Site	140
6.1.10	Time	140
6.2	Image Processing	140
6.2.1	Digital numbers: pixels and pictures, histograms	142
6.2.2	Dynamic range—snow and black cats	143

6.2.3	Filters	146
6.2.3.1	Smoothing	146
6.2.3.2	Edge detection	146
6.3	Histograms and Target Detection	147
6.4	Histograms, Spectral Data, and Transforms	149
6.5	Supplemental Notes on Statistics	153
6.6	Problems	156
<b>Chapter 7</b>	<b>Thermal Infrared</b>	<b>157</b>
7.1	IR Basics	157
7.1.1	Blackbody radiation	157
7.1.2	Wien's displacement law	158
7.1.3	Stefan-Boltzmann law $T^4$	158
7.1.4	Emissivity	159
7.1.5	Atmospheric absorption	159
7.2	IR Concepts	159
7.2.1	Kinetic temperature	159
7.2.2	Thermal inertia, conductivity, capacity, diffusivity	160
7.2.2.1	Heat capacity (specific heat)	160
7.2.2.2	Thermal conductivity	161
7.2.2.3	Thermal inertia	161
7.2.2.4	Thermal diffusivity	161
7.2.2.5	Diurnal temperature variation	162
7.3	Landsat	163
7.4	Early Weather Satellites	165
7.4.1	TIROS	166
7.4.2	NIMBUS	166
7.5	GOES	167
7.5.1	Satellite and sensor	167
7.5.2	Weather and storms—Hurricane Mitch	169
7.5.3	Volcanoes and ash clouds	170
7.5.4	Shuttle launch: vapor trail, rocket	171
7.6	Defense Support Program—DSP	172
7.7	SEBASS—thermal spectral	175
7.7.1	Hard targets	175
7.7.2	Gas measurements: Kilauea—Pu 'u 'O 'o Vent	176
7.8	Problems	178
<b>Chapter 8</b>	<b>Radar</b>	<b>179</b>
8.1	Imaging Radar	179
8.2	Theory	179
8.2.1	Imaging radar basics	179
8.2.2	Radar range resolution	182
8.2.2.1	Signal shape	183

8.2.3	Radar azimuthal resolution	185
8.2.4	Beam pattern and resolution	186
8.3	Synthetic-Aperture Radar	188
8.4	Radar Cross Section ( $\sigma$ )	191
8.4.1	Dielectric coefficient: soil moisture	192
8.4.2	Roughness	194
8.4.3	Tetrahedrons/corner reflectors	194
8.5	Polarization	195
8.6	Wavelength	196
8.7	Vehicles	197
8.7.1	Shuttle Imaging Radar (SIR)	197
8.7.1.1	Soil penetration	199
8.7.1.2	Oil slicks and internal waves	200
8.7.2	RADARSAT: ship detection	201
8.7.3	European radar satellites: ERS-1, ERS-2	202
8.7.3.1	Ship wakes	203
8.7.3.2	Multi-temporal images: Rome	204
8.7.3.3	SPAIN—MOROCCO—Strait of Gibraltar	204
8.7.4	Sandia Ku-band airborne radar	206
8.8	Problems	208
<b>Chapter 9</b>	<b>Radar and LIDAR</b>	<b>211</b>
9.1	Radar Interferometry	211
9.1.1	Topographic mapping	211
9.1.2	The Shuttle Radar Topographic Mapping (SRTM) Mission	214
9.1.2.1	Mission design	215
9.1.2.2	Mission results: level-2 terrain-height datasets (digital topographic maps)	217
9.2	LIDAR	219
9.2.1	Introduction	219
9.2.2	OPTECH: Airborne Laser Terrain Mapper (ALTM)	220
9.2.3	Bathymetry	222
9.3	Exercise	224
<b>Appendix 1</b>	<b>Derivations</b>	<b>225</b>
A1.1	Derivation of the Bohr Atom	225
	Assumption 1: The atom is held together by the Coulomb Force	225
	Assumption 2: The electron moves in an elliptical orbit around the nucleus (as in planetary motion).	226
	Assumption 3: Quantized angular momentum	226
	Assumption 4: Radiation is emitted only from transitions between the discrete energy levels	228

A1.2	Dielectric Theory	229
A1.3	Derivation of the Beam Pattern for a Square Aperture	230
<b>Appendix 2</b>	<b>CORONA</b>	<b>233</b>
A2.1	Mission Overview	233
A2.2	Camera Data	234
A2.3	Mission Summary	235
A2.4	Orbits—An Example	242
<b>Appendix 3</b>	<b>Tracking and Data Relay Satellite System</b>	<b>243</b>
A3.1	Relay Satellites—TDRSS	243
A3.2	White Sands	244
A3.3	TDRS 1 to 7	245
A3.3.1	Satellites	245
A3.3.2	Payload	246
A3.4	TDRS H	247
A3.4.1	TDRS H, I, and J Payload Characteristics	247
A3.4.1.1	S-Band Multiple Access	248
A3.4.1.2	Single-Access (SA) Antenna (2)	248
A3.4.1.3	Space-Ground-Link Antenna (Ku Band)	248
<b>Appendix 4</b>	<b>Useful Equations and Constants</b>	<b>249</b>
EM Waves		249
Bohr Atom		249
Blackbody Radiation		249
Reflection and Refraction		250
Optics		250
Orbital Mechanics and Circular Motion		250
<b>Index</b>		<b>251</b>
