Contents

Preface ix

PART I	INTRODUCTIONS	1
1	Astrophysics Introduction	3
2	Theoretical Physics Introduction	14
3	Computational Physics Introduction	23
4	Mathematical Introduction	32
PART II	THE CONTINUUM LIMIT: $N \rightarrow \infty$	41
5	Paradoxical Thermodynamics	43
6	Statistical Mechanics	49
7	Motion in a Central Potential	58
8	Some Equilibrium Models	68
9	Methods	78
PART III	MEAN FIELD DYNAMICS: $N = 10^6$	91
10	Violent Relaxation	92
11	Internal Mass Loss	103
12	External Influences	110
PART IV	MICROPHYSICS: $N = 2$	119
13	Exponential Orbit Instability	120

14	Two-Body Relaxation	128
15	From Kepler to Kustaanheimo	143
PART V GRAVOTHERMODYNAMICS: $N = 10^6$ 153		
16	Escape and Mass Segregation	154
17	Gravothermal Instability	164
18	Core Collapse Rate for Star Clusters	172
PART VI GRAVITATIONAL SCATTERING: $N = 3$ 179		
19	Thought Experiments	181
20	Mathematical Three-Body Scattering	189
21	Analytical Approximations	199
22	Laboratory Experiments	212
23	Gravitational Burning and Transmutation	221
PART VII PRIMORDIAL BINARIES: $N = 4$ 229		
24	Binaries in Star Clusters	230
25	Triple Formation and Evolution	236
26	A Non-Renewable Energy Source	246
PART VIII POST-COLLAPSE EVOLUTION: $N = 10^6$ 253		
27	Surviving Core Collapse	254
28	Gravothermal Oscillations	263
29	Dissolution	272
PART IX STAR CLUSTER ECOLOGY 277		
30	Stellar and Dynamical Evolution	279
31	Collisions and Capture	284
32	Binary Star Evolution and Blue Stragglers	291
33	Star Cluster Evolution	298
Appendix A – A Simple N -Body Integrator 306		
Appendix B – Hints to Solution of Problems 315		
<i>References</i> 325		
<i>Index</i> 345
