UNIVERSITY PRESS

CONTENTS

<i>Preface</i>	xi
1 Introduction	1
1.1 Introductory remarks	1
1.2 Decision mechanism in image processing	3
1.2.1 Organization of the book	4
2 Statistical linear models	7
2.1 Introductory remarks	7
2.2 Linear models	8
2.2.1 Parameter estimation	8
2.2.2 Linear hypothesis testing	10
2.3 One-way designs	11
2.4 Two-way designs	14
2.5 Incomplete designs	17
2.5.1 Latin square design	17
2.5.2 Græco-Latin square design	21
2.5.3 Incomplete block design	24
2.6 Contrast functions	29
2.6.1 Multiple comparisons techniques	30
2.6.2 Selection of a comparison method	31
2.6.3 Estimable functions	32
2.6.4 Confidence ellipsoids and contrasts	33
2.7 Concluding remarks	34
3 Line detection	35
3.1 Introductory remarks	35
3.2 Unidirectional line detectors	36
3.3 Bidirectional line detectors	39
3.4 Multidirectional line detectors	44
3.5 Multidirectional contrast detectors	46

3.6	Multidirectional detectors in correlated noise	50
3.7	Trajectory detection	55
3.7.1	Unidirectional detectors	55
3.7.2	Bidirectional trajectory detectors	60
3.8	Multidirectional adaptive detectors	62
3.9	Concluding remarks	65
4	Edge detection	66
4.1	Introductory remarks	66
4.2	Edge detection methodology	67
4.3	Unidirectional edge detectors	68
4.4	Bidirectional edge detectors	70
4.5	Multidirectional edge detectors	71
4.5.1	Latin square-based detector	72
4.5.2	Græco-Latin square-based detector	76
4.6	Multidirectional detection in correlated noise	78
4.6.1	Sum of squares under Ω	78
4.6.2	Sum of squares under the hypotheses	80
4.7	Edge reconstruction	81
4.7.1	Methodology	81
4.7.2	Gradient method	82
4.8	Concluding remarks	86
5	Object detection	90
5.1	Introductory remarks	90
5.2	Detection methodology	92
5.3	Transformation-based object detector	94
5.3.1	Uncorrelated data case	94
5.3.2	Correlated data case	96
5.3.3	Sum of squares under Ω	97
5.3.4	Sum of squares under $\omega_a = H_a \cap \Omega$	98
5.3.5	Sum of squares under $\omega_b = H_b \cap \Omega$	99
5.3.6	Determination of background and target correlation matrices	99
5.3.7	Background and target correlation matrices	100
5.3.8	Structure of the permutation matrices	101
5.3.9	A reduced algorithm	101
5.4	Partition-based object detector	104
5.4.1	Image representation	106
5.5	Basic regions and linear contrasts	108
5.5.1	Histogram approach	108
5.5.2	Linear contrasts	109
5.6	Detection procedure	109
5.6.1	Contrast estimate	110
5.6.2	Threshold selection	111
5.6.3	Contrast detection	111

5.7	Orthogonal contrasts—an extension	112
5.8	Form-invariant object detector	118
5.8.1	Invariant representation	119
5.9	Concluding remarks	124
A.1	Contrast calculation	126
A.2	Contrast variance	126
6	Image segmentation	128
6.1	Introduction	128
6.2	Segmentation strategy	129
6.3	Nested design model	132
6.3.1	Gray level images	133
6.4	Logical predicates	135
6.5	Adaptive class formation	138
6.5.1	Test outcomes	139
6.5.2	Merging strategies	142
6.6	Concluding remarks	143
7	Radial masks in line and edge detection	147
7.1	Introductory remarks	147
7.2	Radial masks in one-way ANOVA design	147
7.3	Boundary detection procedure	149
7.4	Contrast-based detectors using radial masks	151
7.5	Power calculation	152
7.6	Concluding remarks	155
8	Performance analysis	156
8.1	Stochastic approximation in parameter estimation	156
8.1.1	Remarks	156
8.1.2	Stochastic approximation versus classical estimation	157
8.2	Stochastic approximation procedures	159
8.2.1	Deterministic case	159
8.2.2	Stochastic case	159
8.2.3	The scalar version of the Robbins–Monro procedure	162
8.2.4	The Kiefer–Wolfowitz procedure	163
8.3	Stochastic approximation in least square estimation	165
8.3.1	Scalar case	166
8.3.2	Vector case	167
8.3.3	Small sample theory	167
8.4	Robust recursive estimation	169
8.4.1	Rank statistic preprocessor	170
8.4.2	Huber’s M -estimator	172
8.4.3	Robust SAMVLS	173
8.5	An illustrative example	174
8.6	Power calculations	176

8.6.1	F-statistic based detectors	176
8.6.2	Contrast-based detectors	178
8.7	Concluding remarks	179
9	Some approaches to image restoration	181
9.1	Introductory remarks	181
9.2	Edge detection preprocessors	181
9.3	Image restoration using linear regressions	186
9.4	Suppression of salt and pepper noise	189
9.5	Some results	192
9.6	Concluding remarks	196
