

Human choice and climate change

VOLUME TWO
Resources and technology

EDITED BY
Steve Rayner
Elizabeth L. Malone

Pacific Northwest National Laboratory

Battelle Press

Contents

<i>Foreword</i>	ix
The International Advisory Board	
<i>Preface</i>	xi
Gerald M. Stokes	
<i>Introduction</i>	xiii
Steve Rayner & Elizabeth Malone	
Why the concern with climate change?	xiii
Why the concern with human choice?	xiv
The conceptual architecture of this assessment	xviii
<i>Human choice and climate change, volume 1: the societal framework</i>	xx
<i>Human choice and climate change, volume 2: resources and technology</i>	xxvii
<i>Human choice and climate change, volume 3: the tools for policy analysis</i>	xxxiv
<i>Human choice and climate change, volume 4: what have we learned?</i>	xxxix
References	xlii
<i>1 The natural science of global climate change</i>	1
Donald J. Wuebbles & Norman J. Rosenberg	
Climate and radiative effects	3
Greenhouse gases and aerosols	10
Radiative forcing on climate	31
Predictions of future climate	40
Climate in the past	47
Effects of climate change	53
Stabilizing concentrations	66
Conclusions	70
References	71

CONTENTS

2	<i>Land and water use</i>	79
	William B. Meyer, W. Neil Adger, Katrina Brown, Dean Graetz, Peter Gleick, John F. Richards, Antonio Magalhães	
	Definitions and data	81
	Land resources and land-use classification	85
	Water resources and water use: classification	86
	Land use: history, current patterns, and consequences	87
	Water use: history, current patterns, and consequences	95
	Accounting for land and water use	98
	Land-use strategies for emissions abatement	116
	Climate change impacts	125
	Conclusions	132
	References	134
3	<i>Coastal zones and oceans</i>	145
	Atiq Rahman & Saleemul Huq	
	Coastal zones, oceans, and inland seas	148
	Impacts on ecosystems, societal activities, and human health	155
	Societal vulnerabilities and assessment	164
	Response options and strategies	177
	The challenges ahead in a climate-changed world	193
	References	198
4	<i>Energy and industry</i>	203
	John Weyant & Yukio Yanigisawa	
	Worldwide trends in energy use and greenhouse gas emissions	208
	Fundamental approaches to energy–industrial systems analysis	214
	An overview of energy use and cost projection methods	233
	Strategic energy-sector planning	242
	Country studies	245
	Global studies	267
	Impacts of climate change on energy and industrial systems	281
	The state of the art in modeling energy and industrial systems	284
	References	285

CONTENTS

5	<i>Energy and social systems</i>	291
	Elizabeth Shove, Loren Lutzenhiser, Simon Guy, Bruce Hackett, Harold Wilhite	
	Conventional perspectives	294
	Alternative approaches	304
	References	322
6	<i>Technological change</i>	327
	Arie Rip & René Kemp	
	Conceptualizations of technology	329
	Understanding dynamics and outcomes of technical change	346
	Proactive management of technological change	372
	Conclusion	387
	References	392
	<i>Sponsoring organizations, International Advisory Board, and project participants</i>	401
	<i>Contents of Volumes 1–4</i>	406
	<i>Index of names</i>	407
	<i>Subject index</i>	429
