Contents

1 Introduction 1

2 Mathematical Preliminaries 15

2.1 Sets . . . 15

2.2 Vectors and Matrices . . . 16

2.3 Linear Inequality Systems . . . 24

2.3.1 The Kuhn-Fourier Theorem . . . 24

2.3.2 Linear Programming . . . 27

2.4 Solutions of Exercises . . . 29

2.5 Solutions of Problems . . . 29

3 Graphs 31

3.1 Introduction . . . 31

3.2 Graphs: Basic Notions . . . 31

3.2.1 Graphs and Subgraphs . . . 31

3.2.2 Connectedness . . . 33

3.2.3 Circuits and Cutsets . . . 34

3.2.4 Trees and Forests . . . 36

3.2.5 Strongly Directedness . . . 38

3.2.6 Fundamental Circuits and Cutsets . . . 38

3.2.7 Orientation . . . 39

3.2.8 Isomorphism . . . 40

3.2.9 Cyclically connectedness . . . 41

3.3 Graphs and Vector Spaces . . . 42

3.3.1 The Circuit and Crossing Edge Vectors . . . 44

3.3.2 Voltage and Current Vectors 45
3.3.3 Voltage and Current Vector Spaces and Tellegen's Theorem . 46
3.3.4 Fundamental cutset matrix of a forest f 47
3.3.5 Fundamental circuit matrix of a forest f 48
3.4 Basic Operations on Graphs and Vector Spaces 50
3.4.1 Restriction and Contraction of Graphs 50
3.4.2 Restriction and Contraction of Vector Spaces 53
3.4.3 Vector Space Duality 54
3.4.4 Relation between Graph Minors and Vector Space Minors . . 55
3.4.5 Representative Matrices of Minors 56
3.4.6 Minty's Theorem 59
3.5 Problems 60
3.6 Graph Algorithms 64
3.6.1 Breadth First Search 66
3.6.2 Depth First Search 67
3.6.3 Minimum Spanning Tree 69
3.6.4 Shortest Paths from a Single Vertex 70
3.6.5 Restrictions and Contractions of Graphs 71
3.6.6 Hypergraphs represented by Bipartite Graphs 71
3.6.7 Preorders and Partial Orders 72
3.6.8 Partitions 73
3.6.9 The Max-Flow Problem 74
3.6.10 Flow Graphs Associated with Bipartite Graphs 79
3.7 Duality 82
3.8 Notes 86
3.9 Solutions of Exercises 86
3.10 Solutions of Problems 97

4 Matroids **103**
4.1 Introduction 103
4.2 Axiom Systems for Matroids 103
4.2.1 Independence and Base Axioms 103
4.2.2 Rank Axioms 105
4.2.3 Circuit Axioms 107

4.2.4 Closure Axioms 108
4.3 Dual of a Matroid 110
4.4 Minors of Matroids 114
4.5 Connectedness in Matroids 119
4.5.1 Duality for Matroids 120
4.6 Matroids and the Greedy Algorithm 121
4.7 Notes 123
4.8 Solutions of Exercises 124

5 Electrical Networks **131**
5.1 Introduction 131
5.2 In Terms of Multiterminal Devices 131
5.3 In Terms of 2-Terminal Devices 133
5.4 Standard Devices 134
5.5 Common Methods of Analysis 142
5.5.1 Nodal Analysis 143
5.5.2 Loop Analysis 145
5.5.3 Modified Nodal Analysis 147
5.5.4 Sparse Tableau Approach 151
5.6 Procedures used in Circuit Simulators 151
5.6.1 Example to Illustrate Working of Circuit Simulators 151
5.6.2 Working of General Purpose Circuit Simulators 152
5.7 State Equations for Dynamic Networks 157
5.8 Multiports in Electrical Networks 160
5.8.1 An informal Description of Multiport Decomposition 161
5.8.2 Thevenin-Norton Theorem 163
5.9 Some Elementary Results of Network Theory 165
5.10 Notes 167
5.11 Solutions of Exercises 167

6 Topological Hybrid Analysis **173**
6.1 Introduction 173
6.2 Electrical Network: A Formal Description 173
6.2.1 Static and Dynamic Electrical Networks 174

6.2.2 Device Decoupling 175
6.3 Some Basic Topological Results 177
6.3.1 Effect of Voltage Unconstrained and Current Unconstrained Devices on the Topological Constraints 177
6.3.2 Voltage and Current shift 179
6.4 A Theorem on Topological Hybrid Analysis 185
6.4.1 The Networks $\mathcal{N}_{AL}$ and $\mathcal{N}_{BK}$ 186
6.5 Structure of Constraints and Optimization 190
6.5.1 Essential Structure of the Constraints 190
6.5.2 Selection of Minimal L and K 191
6.5.3 Solution of Linear Networks by Topological Hybrid Analysis . 195
6.5.4 Decomposition procedure for $\mathcal{N}_{AL}$,$\mathcal{N}_{BK}$ 198
6.5.5 Hybrid Analysis Equations for Linear Networks 199
6.5.6 The Hybrid Rank 203
6.6 Notes 205
6.7 Solutions of Exercises 205

7 The Implicit Duality Theorem and Its Applications 213
7.1 The Vector Space Version 213
7.1.1 The Implicit Duality Theorem: Orthogonality Case 215
7.1.2 Matched and Skewed Sums 217
7.2 *Quasi Orthogonality 219
7.3 Applications of the Implicit Duality Theorem 222
7.3.1 Ideal Transformer Connections 222
7.3.2 Multiport Decomposition 223
7.3.3 Topological Transformation Of Electrical Networks 225
7.3.4 The Adjoint of a Linear System 228
7.3.5 Rank, Nullity and the Hybrid rank 232
7.4 *Linear Inequality Systems 233
7.4.1 Applications of the Polar Form 237
7.5 *Integrality Systems 238
7.6 Problems 243
7.7 Notes 247
7.8 Solutions of Exercises 247

7.9 Solutions of Problems 257

8 Multiport Decomposition **269**

8.1 Introduction 269

8.2 Multiport Decomposition of Vector Spaces 269

8.3 Analysis through Multiport Decomposition 277

8.3.1 Rewriting Network Constraints in the Multiport Form 277

8.3.2 An Intuitive Procedure for Solution through Multiports . . . 278

8.4 Port Minimization 282

8.4.1 An Algorithm for Port Minimization 282

8.4.2 Characterization of Minimal Decomposition 287

8.4.3 Complexity of Algorithm (Port minimization 1) for Graphic Spaces and Sparsity of the Output Matrices 292

8.4.4 *Minimal Decomposition of Graphic Vector Spaces to make Component Spaces Graphic 293

8.5 *Multiport Decomposition for Network Reduction 297

8.6 Problems 302

8.7 Solutions of Exercises 305

8.8 Solutions of Problems 316

9 Submodular Functions **325**

9.1 Introduction 325

9.2 Submodularity 326

9.3 Basic Operations on Semimodular Functions 329

9.4 *Other Operations on Semimodular Functions 335

9.5 Polymatroid and Matroid Rank Functions 339

9.6 Connectedness for Semimodular Functions 344

9.7 *Semimodular Polyhedra 346

9.8 Symmetric Submodular Functions 353

9.9 Problems 358

9.10 Notes 362

9.11 Solutions of Exercises 362

9.12 Solutions of Problems 369

10 Convolution of Submodular Functions **379**

10.1 Introduction 379
10.2 Convolution 379
10.2.1 Formal Properties 379
10.2.2 Examples 381
10.2.3 Polyhedral interpretation for convolution 383
10.3 Matroids, Polymatroids and Convolution 385
10.4 The Principal Partition 387
10.4.1 Introduction 387
10.4.2 Basic Properties of PP 388
10.4.3 Symmetry Properties of the Principal Partition of a Submodular Function 393
10.4.4 Principal Partition from the Point of View of Density of Sets 394
10.4.5 Principal Partition of $f^*(\cdot)$ and $f * g(\cdot)$ 396
10.4.6 The Principal Partition associated with Special Minors . . . 401
10.5 *The Refined Partial Order of the Principal Partition 406
10.6 Algorithms for PP 412
10.6.1 Basic Algorithms 412
10.6.2 *Building the refined partial order given $(\Pi_{pp}, \geq_\pi)$. 417
10.6.3 Algorithm $Convolve_S(w_R(\Gamma_L), w_L)$ 418
10.6.4 Example: PP of $(|\Gamma_L|(\cdot), w_L(\cdot))$ 419
10.7 *Aligned Polymatroid Rank Functions 422
10.8 Notes 431
10.9 Solutions of Exercises 432
10.10Solutions of Problems 446

11 Matroid Union **453**
11.1 Introduction 453
11.2 Submodular Functions induced through a Bipartite Graph 453
11.3 Matroid Union: Algorithm and Structure 460
11.3.1 Introduction 460
11.3.2 The Algorithm 460
11.3.3 Justification and complexity of Algorithm Matroid Union . . 462
11.3.4 Structure of the Matroid Union 464
11.4 PP of the Rank Function of a Matroid 470

11.4.1 Constructing $\mathcal{B}_{\lambda_{r,|\cdot|}}$ 470
11.4.2 Complexity of constructing $\mathcal{B}_{\lambda_{r,|\cdot|}}$ 471
11.4.3 Example 473
11.5 Notes 476
11.6 Solutions of Exercises 477

12 Dilworth Truncation of Submodular Functions 481
12.1 Introduction 481
12.2 Dilworth Truncation 482
12.2.1 Formal Properties 482
12.2.2 Examples 487
12.3 The Principal Lattice of Partitions 489
12.3.1 Basic Properties of the PLP 489
12.3.2 PLP from the Point of View of Cost of Partitioning 497
12.4 *Approximation Algorithms through PLP for the Min Cost Partition Problem 502
12.5 The PLP of Duals and Truncations 507
12.5.1 The PLP of Duals 507
12.5.2 The PLP of the Truncation 509
12.5.3 The Cotruncation Operation and the Principal Lattice of Copartitions 512
12.6 *The Principal Lattice of Partitions associated with Special Fusions . 513
12.7 Building Submodular Functions with desired PLP 516
12.8 Notes 519
12.9 Solutions of Exercises 520
12.10Solutions of Problems 531

13 Algorithms for the PLP of a Submodular Function 533
13.1 Introduction 533
13.2 Minimizing the Partition Associate of a Submodular function 534
13.2.1 Find (Strong) Fusion Set 535
13.2.2 Min$(\bar{f}, S)$ 537
13.3 Construction of the P-sequence of Partitions 539
13.4 Construction of the DTL 542
13.5 Complexity of construction of the PLP 544

13.6 Construction of the PLP of the dual 545
13.7 PLP Algorithms for $(w_R\Gamma)(\cdot)$ and $-(w_R E_L)(\cdot)$ 545
13.7.1 PLP of $(w_R\Gamma)(\cdot)$ 546
13.7.2 PLP of $(-w_R E_L)(\cdot)$ 550
13.8 Structural Changes in Minimizing Partitions 555
13.9 Relation between PP and PLP 559
13.10Fast Algorithms for Principal Partition of the rank function of a graph564
13.11Solutions of Exercises 566

14 The Hybrid Rank Problem **571**
14.1 Introduction 571
14.2 The Hybrid Rank Problem - First Formulation 571
14.3 The Hybrid Rank Problem - Second Formulation 576
14.3.1 Introduction 576
14.3.2 Membership Problem with Matroid Expansion 576
14.3.3 Membership Problem with Graphic Matroid Expansion . . . 582
14.3.4 PLP of the rank function of a matroid 587
14.4 The Hybrid Rank Problem - Third Formulation 588
14.4.1 Introduction 588
14.4.2 Fusions and Fissions 590
14.4.3 Relation between the Hybrid Rank of a Graph and its Hybrid Rank relative to a Partition 595
14.5 The Hybrid Rank Problem - Fourth Formulation 598
14.5.1 Introduction 598
14.5.2 Generalized Fusions and Fissions 600
14.5.3 Port Decomposition and Generalized Hybrid Rank 602
14.5.4 Relation between the Hybrid Rank of a Representative Matrix of a Vector Space and its Generalized Hybrid Rank relative to a Partition 605
14.5.5 Nesting Property of Optimal Subspaces 611
14.6 Solutions of Exercises 614
