CONTENTS

List of Symbols	xi
Preface	xvii
1 Introduction	1
1.1 The Scope of Thermodynamics	1
1.2 Dimensions and Units	2
1.3 Force	3
1.4 Temperature	4
1.5 Defined Quantities; Volume	6
1.6 Pressure	6
1.7 Work	9
1.8 Energy	10
1.9 Heat	15
2 The First Law and Other Basic Concepts	18
2.1 Joule's Experiments	18
2.2 Internal Energy	18
2.3 The First Law of Thermodynamics	19
2.4 Thermodynamic State and State Functions	21
2.5 Enthalpy	26
2.6 The Steady-State Steady-Flow Process	27
2.7 Equilibrium	34
2.8 The Phase Rule	34
2.9 The Reversible Process	36
2.10 Constant- V and Constant- P Processes	42
2.11 Heat Capacity	43
3 Volumetric Properties of Pure Fluids	52
3.1 PVT Behavior of Pure Substances	52
3.2 Virial Equations	59
3.3 The Ideal Gas	62
3.4 Application of the Virial Equations	76
3.5 Cubic Equations of State	80
3.6 Generalized Correlations for Gases	85
3.7 Generalized Correlations for Liquids	94
3.8 Molecular Theory of Fluids	96
3.9 Second Virial Coefficients from Potential Functions	103

4	Heat Effects	116
4.1	Sensible Heat Effects	117
4.2	Internal Energy of Ideal Gases: Microscopic View	124
4.3	Latent Heats of Pure Substances	126
4.4	Standard Heat of Reaction	129
4.5	Standard Heat of Formation	130
4.6	Standard Heat of Combustion	133
4.7	Temperature Dependence of ΔH°	133
4.8	Heat Effects of Industrial Reactions	137
5	The Second Law of Thermodynamics	150
5.1	Statements of the Second Law	151
5.2	Heat Engines	152
5.3	Thermodynamic Temperature Scales	155
5.4	Thermodynamic Temperature and the Ideal-Gas Scale	156
5.5	Entropy	159
5.6	Entropy Changes of an Ideal Gas	163
5.7	Mathematical Statement of the Second Law	166
5.8	The Third Law of Thermodynamics	171
5.9	Entropy from the Microscopic Viewpoint	171
6	Thermodynamic Properties of Fluids	179
6.1	Property Relations for Homogeneous Phases	179
6.2	Residual Properties	190
6.3	Two-Phase Systems	196
6.4	Thermodynamic Diagrams	199
6.5	Tables of Thermodynamic Properties	203
6.6	Generalized Property Correlations for Gases	205
7	Thermodynamics of Flow Processes	220
7.1	Equations of Balance	221
7.2	Duct Flow of Compressible Fluids	237
7.3	Turbines (Expanders)	247
7.4	Compression Processes	253
8	Production of Power from Heat	267
8.1	The Steam Power Plant	268
8.2	Internal-Combustion Engines	280
8.3	The Otto Engine	281
8.4	The Diesel Engine	284
8.5	The Gas-Turbine Power Plant	285
8.6	Jet Engines; Rocket Engines	289

9	Refrigeration and Liquefaction	295
9.1	The Carnot Refrigerator	296
9.2	The Vapor-Compression Cycle	297
9.3	Comparison of Refrigeration Cycles	298
9.4	The Choice of Refrigerant	303
9.5	Absorption Refrigeration	305
9.6	The Heat Pump	307
9.7	Liquefaction Processes	308
10	Solution Thermodynamics: Theory	315
10.1	Fundamental Property Relation	316
10.2	Chemical Potential as a Criterion for Phase Equilibria	317
10.3	Partial Properties	319
10.4	Ideal-Gas Mixtures	329
10.5	Fugacity and Fugacity Coefficient for a Pure Species	332
10.6	Fugacity and Fugacity Coefficient for Species in Solution	338
10.7	Generalized Correlations for the Fugacity Coefficient	342
10.8	The Ideal Solution	347
10.9	Excess Properties	349
10.10	Hydrogen Bonding and Charge-Transfer Complexing	352
10.11	Behavior of Excess Properties of Liquid Mixtures	356
11	Solution Thermodynamics: Applications	366
11.1	Liquid-Phase Properties from VLE Data	366
11.2	Models for the Excess Gibbs Energy	386
11.3	Property Changes of Mixing	390
11.4	Heat Effects of Mixing Processes	397
11.5	Molecular Basis for Mixture Behavior	410
12	VLE at Low to Moderate Pressures	422
12.1	The Nature of Equilibrium	422
12.2	The Phase Rule. Duhem's Theorem	423
12.3	VLE: Qualitative Behavior	424
12.4	The Gamma/Phi Formulation of VLE	434
12.5	Dewpoint and Bubblepoint Calculations	437
12.6	Flash Calculations	456
12.7	Solute (1) / Solvent (2) Systems	461
13	Thermodynamic Properties and VLE from Equations of State	470
13.1	Properties of Fluids from the Virial Equations of State	470
13.2	Properties of Fluids from Cubic Equations of State	474
13.3	Fluid Properties from Correlations of the Pitzer Type	476
13.4	VLE from Cubic Equations of State	479

14 Topics in Phase Equilibria	501
14.1 Equilibrium and Stability	501
14.2 Liquid/Liquid Equilibrium (LLE)	508
14.3 Vapor/Liquid/Liquid Equilibrium (VLLE)	516
14.4 Solid/Liquid Equilibrium (SLE)	526
14.5 Solid/Vapor Equilibrium (SVE)	531
14.6 Equilibrium Adsorption of Gases on Solids	536
14.7 VLE by Molecular Simulation	553
15 Chemical-Reaction Equilibria	559
15.1 The Reaction Coordinate	560
15.2 Application of Equilibrium Criteria to Chemical Reactions	564
15.3 The Standard Gibbs Energy Change and the Equilibrium Constant	565
15.4 Effect of Temperature on the Equilibrium Constant	568
15.5 Evaluation of Equilibrium Constants	571
15.6 Relation of Equilibrium Constants to Composition	573
15.7 Equilibrium Conversions for Single Reactions	577
15.8 Phase Rule & Duhem's Theorem for Reacting Systems	590
15.9 Multireaction Equilibria	594
16 Thermodynamic Analysis of Processes	612
16.1 Calculation of Ideal Work	612
16.2 Lost Work	617
16.3 Thermodynamic Analysis of Steady-State Flow Processes	618
A Conversion Factors and Values of the Gas Constant	632
B Properties of Pure Species	634
C Heat Capacities and Property Changes of Formation	637
D Representative Computer Programs	642
D.1 Defined Functions	642
D.2 Solution of Example Problems by Mathcad [®]	645
E The Lee/Kesler Generalized-Correlation Tables	649
F Steam Tables	667
G UNIFAC Method	740
H Newton's Method	747
Index	753
