# EUROPE'S ENVIRONMENT The Dobříš Assessment

Edited by David Stanners and Philippe Bourdeau

The report on the state of the pan-European environment requested by the environment ministers for the whole of Europe at the ministerial conference held at Dobříš Castle, Czechoslovakia, June 1991.

Prepared by the European Environment Agency Task Force (European Commission: DG XI and Phare) in cooperation with:

United Nations Economic Commission for Europe United Nations Environment Programme Organisation for Economic Cooperation and Development The Council of Europe IUCN – The World Conservation Union World Health Organization together with Eurostat and individual European countries.

European Environment Agency Copenhagen

Summary	xxi

#### PART I THE CONTEXT

1	Reporting on Europe's environment	3
	Introduction	3
	Scope and coverage of this report	3
	Constraints and limitations	4
	Information selection and assessment	5
	Presentation strategy	6
2	Environmental changes and human development	9
	Environmental change	9
	Sustainability	13
	European and global dimensions	14
	Responses	15
3	Europe: the continent	18
	Extent and boundaries	18
	Geography and geology	18
	Climate	20
	Biogeography	22
	Land-cover and landuse	23

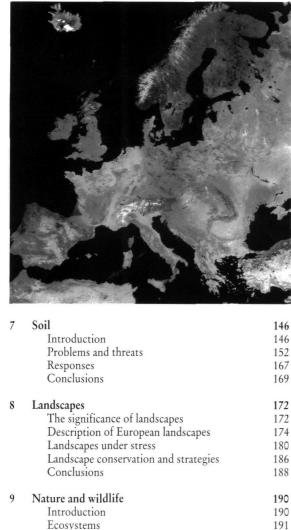

### PART II THE ASSESSMENT

4	Air Introduction Urban and local air pollution Regional and transboundary air pollution Global air pollution Summary and conclusions	27 27 29 35 48 53
5	Inland waters Introduction The water resource Groundwater Rivers, reservoirs and lakes Conclusions	57 57 58 64 73 102
6	The seas Introduction Common problems The European seas: overview The Mediterranean Sea The Black Sea and the Sea of Azov The Caspian Sea The White Sea The White Sea The Norwegian Sea The Norwegian Sea The North Sea The North Sea The North Atlantic Ocean Conclusions and the way forward	109 109 111 115 116 121 124 126 127 131 132 136 140 142

/	rature and whenter		
	Introduction		
	Ecosystems		
	Fauna and flora		
	Nature conservation		
	Conclusions		
	Ecosystem site lists		
10	The urban environment		
	The urban (eco)system		

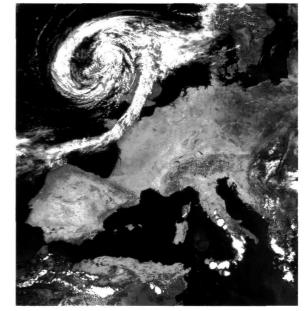

Urban environn	nental quality
Urban flows	1 2
Urban patterns	
Fowards sustain	able European cities

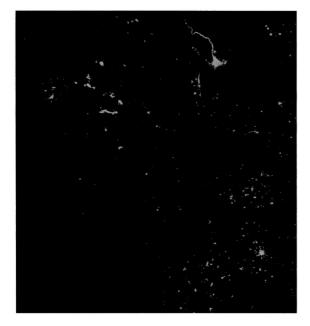

#### 11 Human health

Human health	297
Introduction	297
Environmental health hazards	298
The health of the European population	298
Environment-related health problems in Europe	301
Conclusions	304

#### PART III PRESSURES

12	<b>Population, production and consumption</b> Introduction Production and consumption Economic growth versus development	<b>307</b> 307 311 315
13	Exploitation of natural resources Introduction Renewable resources Non-renewable resources Physical intrusion	<b>317</b> 317 317 320 321
14	Emissions Introduction Emission inventories Atmospheric emissions Emissions to water Towards integrated pollution prevention and control	<b>323</b> 323 323 326 331 339
15	Waste Introduction Material life-cycle Waste production Waste management Waste movements Closing material cycles Contaminated waste sites Radioactive waste Summary and conclusions	<ul> <li>342</li> <li>342</li> <li>342</li> <li>347</li> <li>350</li> <li>352</li> <li>352</li> <li>356</li> <li>357</li> <li>357</li> </ul>
16	Noise and radiation Introduction Noise Non-ionising radiation Ionising radiation	<b>359</b> 359 363 370
17	Chemicals and genetically modified organisms Introduction Chemicals and chemical products Genetically modified organisms Conclusions	<b>375</b> 375 375 380 382
18	Natural and technological hazards Introduction Hazardous events: a separate cause of impacts Sources and consequences Hazardous events as a cause of damage	<b>383</b> 383 383 383 386 395

# PART IV HUMAN ACTIVITIES

19	Energy Introduction Environmental impacts Trends in energy production and consumption Future energy use: underlying driving forces Summary and conclusions	<b>399</b> 399 400 405 409 412
20	Industry Introduction Definitions of industry Environmental impacts Resource use by industry Trends in manufacturing activities Industry response to environmental factors Pollution abatement and investment decisions Conclusions	<b>414</b> 414 414 415 419 421 428 431 431
21	<b>Transport</b> Introduction Environmental impacts Trends and underlying forces in the transport system Outlook Conclusions	<b>434</b> 434 435 442 444 445
22	Agriculture Introduction Environmental impacts The evolution of agricultural production in Europe Agricultural practices Agricultural policies Conclusions	447 447 448 451 453 460 461
23	Forestry Introduction Environmental impacts Changes in European forests and forestry Summary and conclusions	<b>464</b> 464 469 477
24	Fishing and aquaculture Introduction An overview of fisheries resources in Europe Environmental impacts of fishing Environmental impacts of aquaculture Fisheries policy Conclusions	479 479 479 481 486 487 487

Tourism and recreation	489
Introduction	489
Key concepts: sustainable tourism,	
indicators and carrying capacities	490
Environmental impacts of tourism	
and recreation	491
Outlook	496
Managing for sustainable tourism	499
Conclusions	500
Households	502
Introduction	502
Definition and importance of households	502
Resource needs of households	504
Emissions from households	505
Driving forces	506
Examples of control measures	509
Conclusions	509

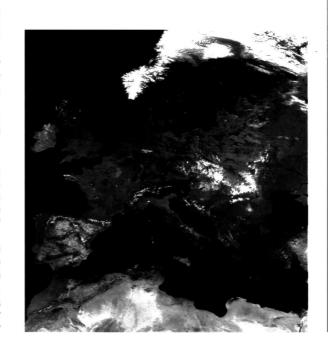

#### PART V PROBLEMS

Conclusions

25

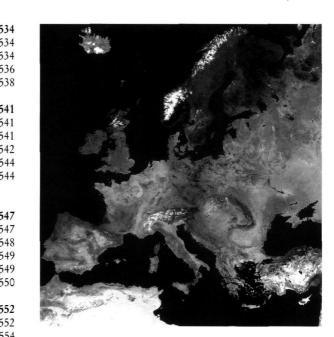

26

27	Climate change The problem The causes Consequences of climatic changes Goals Strategies	<b>513</b> 513 514 516 519 520
28	<b>Stratospheric ozone depletion</b> The problem The causes The consequences Goals Strategies	<b>523</b> 523 524 525 526 527
29	Loss of biodiversity Introduction Genetic diversity Trends Sustainable goals Strategies	530 530 531 531 532 532

30	Major accidents The problem Goals: setting acceptable risk levels Managing the risks Nuclear accidents	<b>534</b> 534 534 536 538
31	Acidification The problem The causes The consequences The goals Strategies	<b>541</b> 541 542 544 544
32	Tropospheric ozone and other photochemical oxidants The problem The causes The consequences Goals Strategies	<b>547</b> 547 548 549 549 550
33	The management of freshwater The problems: causes and effects Trends and scenarios Transboundary river management Sustainable goals Strategic lines of action	<b>552</b> 552 554 555 556 556
34	Forest degradation Introduction Damage attributed to atmospheric pollution Damage due to fire	<b>558</b> 558 558 563
35	Coastal zone threats and management Introduction Definition of the coastal zone Coastal zone processes The problems: causes and consequences Goals and strategies for coastal zone management Conclusions	<b>568</b> 568 569 570 573 574
36	Waste production and management The problem The causes The consequences Responses Sustainable goals Strategies	<b>576</b> 576 578 579 579 582 582
37	Urban stress The problem Causes and consequences Trends and scenarios Sustainability goals Strategies	<b>584</b> 584 584 587 587 588
38	<b>Chemical risk</b> The problem Goals Strategies	<b>591</b> 591 592 593
