Lecture Notes in Mathematics

Edited by A. Dold and B. Eckmann

1135

Number Theory

A Seminar held at the Graduate School and University Center of the City University of New York 1983–84

Edited by D. V. Chudnovsky, G. V. Chudnovsky, H. Cohn and M. B. Nathanson

Springer-Verlag
Berlin Heidelberg New York Tokyo
R.T. BUMBY, Hausdorff dimension of sets arising in number theory.............. 1

D.V. CHUDNOVSKY, G.V. CHUDNOVSKY, Applications of Padé approximations to diophantine inequalities in values of G-functions.................. 9

D.V. CHUDNOVSKY, G.V. CHUDNOVSKY, Applications of Padé approximations to the Grothendieck conjecture on linear differential equations........... 52

H. COHN, Klein’s paradox, the icosahedron, and ring class fields.................. 101

L. EHRENPREIS, Transcendental numbers and partial differential equations.............. 112

D.A. HEJHAL, A classical approach to a well-known spectral correspondence on quaternion groups................................. 127

W. HOYT, On surfaces associated with an indefinite ternary lattice.................. 197

M.I. KNOPP, Modular integrals on \( \Gamma_0(N) \) and Dirichlet series with functional equations................................. 211

A. NAFTALEVICH, M. SCHREIBER, Trigonometric polynomials and sums of squares................................. 225

P. SARNAK, On the number of points on certain curves and an uncertainty principle................................. 239

N. YUI, The Brauer group of the product of two curves over a finite field.............. 254
