

Robert H. Shumway
David S. Stoffer

Time Series Analysis and Its Applications

With R Examples

Second Edition

4u Springer

Contents

Characteristics of Time Series	1
1.1 Introduction	1
1.2 The Nature of Time Series Data	4
1.3 Time Series Statistical Models	11
1.4 Measures of Dependence: Autocorrelation and Cross-Correlation	18
1.5 Stationary Time Series	23
1.6 Estimation of Correlation	29
1.7 Vector-Valued and Multidimensional Series	34
Problems	40
Time Series Regression and Exploratory Data Analysis	48
2.1 Introduction	48
2.2 Classical Regression in the Time Series Context	49
2.3 Exploratory Data Analysis	57
2.4 Smoothing in the Time Series Context	71
Problems	79
ARIMA Models	84
3.1 Introduction	84
3.2 Autoregressive Moving Average Models	85
3.3 Difference Equations	98
3.4 Autocorrelation and Partial Autocorrelation Functions	103
3.5 Forecasting	110
3.6 Estimation	122
3.7 Integrated Models for Nonstationary Data	140
3.8 Building ARIMA Models	143
3.9 Multiplicative Seasonal ARIMA Models	154
Problems	165
Spectral Analysis and Filtering	174
4.1 Introduction	174
4.2 Cyclical Behavior and Periodicity	176
4.3 The Spectral Density	181

4.4	Periodogram and Discrete Fourier Transform	187
4.5	Nonparametric Spectral Estimation	197
4.6	Multiple Series and Cross-Spectra	215
4.7	Linear Filters	220
4.8	Parametric Spectral Estimation	228
4.9	Dynamic Fourier Analysis and Wavelets	232
4.10	Lagged Regression Models	245
4.11	Signal Extraction and Optimum Filtering	251
4.12	Spectral Analysis of Multidimensional Series	256
	Problems	258
5	Additional Time Domain Topics	271
5.1	Introduction	271
5.2	Long Memory ARMA and Fractional Differencing	271
5.3	GARCH Models	280
5.4	Threshold Models	289
5.5	Regression with Autocorrelated Errors	293
5.6	Lagged Regression: Transfer Function Modeling	295
5.7	Multivariate ARMAX Models	302
	Problems	320
6	State-Space Models	324
6.1	Introduction	324
6.2	Filtering, Smoothing, and Forecasting	330
6.3	Maximum Likelihood Estimation	339
6.4	Missing Data Modifications	348
6.5	Structural Models: Signal Extraction and Forecasting	352
6.6	ARMAX Models in State-Space Form	355
6.7	Bootstrapping State-Space Models	357
6.8	Dynamic Linear Models with Switching	362
6.9	Nonlinear and Non-normal State-Space Models Using Monte Carlo Methods	376
6.10	Stochastic Volatility	388
6.11	State-Space and ARMAX Models for Longitudinal Data Analysis	394
	Problems	404
7	Statistical Methods in the Frequency Domain	412
7.1	Introduction	412
7.2	Spectral Matrices and Likelihood Functions	416
7.3	Regression for Jointly Stationary Series	417
7.4	Regression with Deterministic Inputs	426
7.5	Random Coefficient Regression	434
7.6	Analysis of Designed Experiments	438
7.7	Discrimination and Cluster Analysis	449

7.8	Principal Components and Factor Analysis.	464
7.9	The Spectral Envelope.	479
	Problems.	495
Appendix A: Large Sample Theory		501
A.1	Convergence Modes.	501
A.2	Central Limit Theorems.	509
A.3	The Mean and Autocorrelation Functions.	513
Appendix B: Time Domain Theory		522
B.1	Hilbert Spaces and the Projection Theorem.	522
B.2	Causal Conditions for ARMA Models.	526
B.3	Large Sample Distribution of the AR(p) Conditional Least Squares Estimators.	528
B.4	The Wold Decomposition.	532
Appendix C: Spectral Domain Theory		534
C.1	Spectral Representation Theorem.	534
C.2	Large Sample Distribution of the DFT and Smoothed Periodogram.	539
C.3	The Complex Multivariate Normal Distribution.	550
