

G. Pahl and W. Beitz

# Engineering Design

## A Systematic Approach

Translated by Ken Wallace,  
Lucienne Blessing and Frank Bauert

Edited by Ken Wallace

With 354 Figures

Springer

# Contents

<b>Authors' Foreword</b> . . . . .	<b>xiii</b>
<b>Editor's Foreword</b> . . . . .	<b>xv</b>
<b>The Overall Structure of the Second Edition</b> . . . . .	<b>xix</b>
<b>Suggestions for Using this Book in Design Teaching</b> . . . .	<b>xxiii</b>
<b>1 Introduction</b> . . . . .	<b>1</b>
1.1 The Scope of Design . . . . .	1
1.1.1 Tasks and Activities. . . . .	1
1.1.2 The Position of the Design Process Within a Company. . . . .	7
1.1.3 Trends. . . . .	9
1.2 The Necessity for Systematic Design . . . . .	10
1.2.1 Requirements and Need for Systematic Design . . . .	10
1.2.2 Historical Background. . . . .	11
1.2.3 Current Methods. . . . .	16
1 Design Methods . . . . .	16
2 Systems Theory. . . . .	20
3 Value Analysis . . . . .	22
4 VDI Guidelines. . . . .	23
1.2.4 Authors' Own Aims. . . . .	24
<b>2 Fundamentals</b> . . . . .	<b>27</b>
2.1 Fundamentals of Technical Systems. . . . .	27
2.1.1 System, Plant, Equipment, Machine, Assembly and Component . . . . .	27
2.1.2 Conversion of Energy, Material and Signals. . . . .	29
2.1.3 Functional Interrelationship. . . . .	31
1 Fundamentals . . . . .	31
2 Logical Considerations . . . . .	34
2.1.4 Working Interrelationship. . . . .	37

1 Physical Effects . . . . .	38
2 Geometric and Material Characteristics . . . . .	40
2.1.5 Constructional Interrelationship. . . . .	42
2.1.6 System Interrelationship . . . . .	42
2.1.7 Data Processing Systems. . . . .	44
2.1.8 Objectives, Constraints and Guidelines. . . . .	45
2.2 Fundamentals of the Systematic Approach . . . . .	46
2.2.1 Psychology of Problem Solving. . . . .	46
1 Problem Characteristics . . . . .	47
2 Means for Problem Solving—Thought Structures . . . . .	47
3 Characteristics of Good Problem Solvers . . . . .	50
4 Problem Solving as Information Conversion . . . . .	53
2.2.2 General Working Methodology. . . . .	54
1 Purposeful Thinking . . . . .	55
2 Analysis . . . . .	56
3 Abstraction . . . . .	57
4 Synthesis . . . . .	57
5 Generally Applicable Methods . . . . .	57
6 Division of Labour and Collaboration . . . . .	60
<b>3 Process of Planning and Designing . . . . .</b>	<b>61</b>
3.1 General Problem-Solving Process. . . . .	61
3.2 Flow of Work During the Process of Planning and Designing. . . . .	64
1 Planning and Clarifying the Task . . . . .	67
2 Conceptual Design . . . . .	67
3 Embodiment Design . . . . .	68
4 Detail Design . . . . .	69
<b>4 General Methods for Finding and Evaluating Solutions . . . . .</b>	<b>71</b>
4.1 Solution Finding Methods. . . . .	71
4.1.1 Conventional Methods. . . . .	71
1 Literature Search . . . . .	71
2 Analysis of Natural Systems. . . . .	72
3 Analysis of Existing Technical Systems . . . . .	72
4 Analogies. . . . .	74
5 Measurements and Model Tests. . . . .	74
4.1.2 Intuitive Methods. . . . .	75
1 Brainstorming . . . . .	76
2 Method 635. . . . .	78
3 Gallery Method . . . . .	78
4 Delphi Method . . . . .	79
5 Synectics . . . . .	80
6 Combination of Methods . . . . .	81
4.1.3 Discursive Methods. . . . .	82
1 Systematic Study of Physical Processes . . . . .	82

2	Systematic Search with the Help of Classification Schemes	84
3	Use of Design Catalogues	89
4.1.4	Methods for Combining Solutions	94
1	Systematic Combination	94
2	Combining with the Help of Mathematical Methods	98
4.2	Selection and Evaluation Methods	99
4.2.1	Selecting Solution Variants	99
4.2.2	Evaluating Solution Variants	102
1	Basic Principles	103
2	Comparison of Evaluation Procedures	116
<b>5</b>	<b>Product Planning and Clarifying the Task</b>	<b>119</b>
5.1	Product Planning	119
5.1.1	Task and General Approach	119
5.1.2	Situation Analysis	122
5.1.3	Formulating Search Strategies	124
5.1.4	Finding Product Ideas	126
5.1.5	Selection of Product Ideas	127
5.1.6	Product Definition	128
5.1.7	Product Planning in Practice	129
5.2	Clarifying the Task	130
5.2.1	The Importance of Clarifying the Task	130
5.2.2	The Requirements List (Design Specification)	131
1	Contents	131
2	Format	132
3	Listing the Requirements	134
4	Examples	135
5	Further Applications	135
5.2.3	Practical Application of Requirements Lists	137
<b>6</b>	<b>Conceptual Design</b>	<b>139</b>
6.1	Steps of Conceptual Design	139
6.2	Abstracting to Identify the Essential Problems	140
6.2.1	Aim of Abstraction	140
6.2.2	Abstraction and Problem Formulation	142
6.2.3	Systematic Broadening of Problem Formulation	142
6.3	Establishing Function Structures	149
6.3.1	Overall Function	149
6.3.2	Breaking Down into Sub-Functions	150
6.3.3	Practical Uses of Function Structures	155
6.4	Developing Working Structures	161
6.4.1	Searching for Working Principles	161
6.4.2	Combining Working Principles	164
6.4.3	Selecting Suitable Working Structures	170
6.4.4	Practical Uses of Working Structures	170

6.5	Developing Concepts	173
6.5.1	Firming up into Principle Solution Variants	173
6.5.2	Evaluating Principle Solution Variants	178
6.5.3	Practical Approach to Finding Concepts	183
6.6	Examples of Conceptual Design	187
6.6.1	Mechanical System	187
<b>7</b>	<b>Embodiment Design</b>	<b>199</b>
7.1	Steps of Embodiment Design	199
7.2	Checklist for Embodiment Design	205
7.3	Basic Rules of Embodiment Design	205
7.3.1	Clarity	207
7.3.2	Simplicity	213
7.3.3	Safety	217
1	Nature and Scope of Safety Methods	217
2	Direct Safety Principles	219
3	Indirect Safety Principles	224
4	Designing for Safety	232
7.4	Principles of Embodiment Design	237
7.4.1	Principles of Force Transmission	239
1	Flowlines of Force and the Principle of Uniform Strength	239
2	Principle of Direct and Short Force Transmission Path	239
3	Principle of Matched Deformations	241
4	Principle of Balanced Forces	246
7.4.2	Principle of the Division of Tasks	248
1	Assignment of Sub-Functions	248
2	Division of Tasks for Distinct Functions	250
3	Division of Tasks for Identical Functions	254
7.4.3	Principle of Self-Help	257
1	Concepts and Definitions	257
2	Self-Reinforcing Solutions	260
3	Self-Balancing Solutions	263
4	Self-Protecting Solutions	264
7.4.4	Principles of Stability and Bi-Stability	267
1	Principle of Stability	267
2	Principle of Bi-Stability	269
7.4.5	Principles for Fault Free Design	271
7.5	Guidelines for Embodiment Design	273
7.5.1	General Considerations	273
7.5.2	Design to Allow for Expansion	274
1	Expansion	274
2	Expansion of Components	276
3	Relative Expansion of Components	281
7.5.3	Design to Allow for Creep and Relaxation	286

1 Behaviour of Materials Subject to Temperature Changes. . . . .	286
2 Creep . . . . .	288
3 Relaxation . . . . .	290
4 Design Features. . . . .	292
7.5.4 Design Against Corrosion Damage. . . . .	294
1 Causes and Effects of Corrosion . . . . .	294
2 Free Surface Corrosion. . . . .	294
3 Contact Corrosion . . . . .	297
4 Stress Corrosion . . . . .	299
5 Selective Corrosion within a Material. . . . .	301
6 Examples of Designing Against Corrosion Damage . . . . .	302
7.5.5 Design for Ergonomics. . . . .	305
1 Fundamentals . . . . .	305
2 Human Activities and Ergonomic Constraints. . . . .	308
3 Identifying Ergonomic Requirements . . . . .	310
7.5.6 Design for Aesthetics. . . . .	311
1 Aims . . . . .	311
2 Visual Information. . . . .	314
3 Guidelines for Achieving Good Aesthetics. . . . .	315
7.5.7 Design for Production. . . . .	317
1 Relationship between Design and Production . . . . .	317
2 Appropriate Overall Layout Design . . . . .	319
3 Appropriate Form Design of Components . . . . .	327
4 Appropriate Selection of Materials and of Semi-Finished Materials. . . . .	334
5 Appropriate Use of Standard and Bought-Out Components. . . . .	339
6 Appropriate Documentation . . . . .	340
7.5.8 Design for Ease of Assembly. . . . .	340
1 Types of Assembly . . . . .	340
2 Designing the Layout . . . . .	341
3 Designing Assembly Interfaces . . . . .	344
4 Designing Interface Elements. . . . .	344
5 Guidelines for Application and Selection . . . . .	344
7.5.9 Design to Standards. . . . .	349
1 Objectives of Standardisation . . . . .	349
2 Types of Standard. . . . .	351
3 Preparing Standards . . . . .	352
4 Using Standards. . . . .	353
5 Developing Standards . . . . .	355
7.5.10 Design for Ease of Maintenance. . . . .	357
1 Goals and Terminology. . . . .	357
2 Design for Ease of Maintenance. . . . .	359
7.5.11 Design for Recycling. . . . .	360
1 Aims and Terminology. . . . .	360

2 Recycling Support Processes . . . . .	362
3 Design for Recycling . . . . .	364
4 Examples of Design for Recycling . . . . .	368
5 Evaluating Recycling Potential . . . . .	372
7.5.12 Design for Minimum Risk . . . . .	373
1 Coping with Risks . . . . .	375
2 Examples of Design for Minimum Risk . . . . .	377
7.6 Evaluating Embodiment Designs. . . . .	381
7.7 Example of Embodiment Design. . . . .	384
7.8 Detail Design. . . . .	400
<b>8 Developing Size Ranges and Modular Products . . . . .</b>	<b>405</b>
8.1 Size Ranges. . . . .	405
8.1.1 Similarity Laws. . . . .	406
8.1.2 Decimal-Geometric Preferred Number Series. . . . .	409
8.1.3 Selection of Step Sizes. . . . .	412
8.1.4 Geometrically Similar Size Ranges. . . . .	415
8.1.5 Semi-Similar Size Ranges. . . . .	419
1 Overriding Similarity Laws . . . . .	419
2 Overriding Task Requirements . . . . .	422
3 Overriding Production Requirements . . . . .	423
4 Adaptation with the Help of Exponential Equations . . . . .	425
5 Examples . . . . .	427
8.1.6 Development of Size Ranges. . . . .	431
8.2 Modular Products. . . . .	433
8.2.1 Modular Product Systematics. . . . .	434
8.2.2 Modular Product Development . . . . .	437
8.2.3 Advantages and Limitations of Modular Systems . . . . .	447
8.2.4 Examples. . . . .	450
<b>9 Design for Quality. . . . .</b>	<b>455</b>
9.1 Faults and Disturbing Factors. . . . .	456
9.2 Fault-Tree Analysis. . . . .	456
9.3 Failure Mode and Effect Analysis (FMEA). . . . .	463
<b>10 Design for Minimum Cost. . . . .</b>	<b>467</b>
10.1 Cost Factors. . . . .	467
10.2 Fundamentals of Cost Calculations. . . . .	469
10.3 Methods for Estimating Costs. . . . .	471
10.3.1 Comparing with Relative Costs. . . . .	471
10.3.2 Estimating Using Share of Material Costs. . . . .	476
10.3.3 Estimating Using Regression Analysis. . . . .	477
10.3.4 Extrapolating Using Similarity Relations. . . . .	479
1 Basic Design as Reference . . . . .	479
2 Operation Element as Reference. . . . .	484
3 Regression Analysis as Reference . . . . .	489

10.3.5 Cost Structures. . . . .	491
10.4 Value Analysis. . . . .	493
10.5 Rules for Minimising Costs. . . . .	493
<b>11 Summary. . . . .</b>	<b>495</b>
11.1 The Systematic Approach. . . . .	495
11.2 Experiences of Applying the Systematic Approach in Practice. . . . .	499
<b>References. . . . .</b>	<b>503</b>
<b>English Bibliography. . . . .</b>	<b>531</b>
<b>Index. . . . .</b>	<b>535</b>
