# Evolvable Systems: From Biology to Hardware

Second International Conference, ICES 98  
Lausanne, Switzerland, September 23-25, 1998  
Proceedings

Springer

# Table of Contents

## Evolution of Digital Systems

A Gate-Level EHW Chip: Implementing GA Operations and Reconfigurable Hardware on a Single LSI . . . . .	1
<i>I. Kajitani, T. Hoshino, D. Nishikawa, H. Yokoi, S. Nakaya, T. Yamauchi, T. Inuo, N. Kajihara, M. Iwata, D. Keymeulen, and T. Higuchi</i>	
On the Automatic Design of Robust Electronics Through Artificial Evolution . . . . .	13
<i>A. Thompson</i>	
Aspects of Digital Evolution: Geometry and Learning . . . . .	25
<i>J. F. Miller and P. Thomson</i>	
Evolutionary Design of Hashing Function Circuits Using an FPGA . . . . .	36
<i>E. Damiani, V. Liberali, and A. G. B. Tettamanzi</i>	
A New Research Tool for Intrinsic Hardware Evolution . . . . .	47
<i>P. Layzell</i>	
A Divide-and-Conquer Approach to Evolvable Hardware . . . . .	57
<i>J. Torresen</i>	
Evolution of Astable Multivibrators <i>in Silico</i> . . . . .	66
<i>L. Huelsbergen, E. Rietman, and R. Slous</i>	
Some Aspects of an Evolvable Hardware Approach for Multiple-Valued Combinational Circuit Design . . . . .	78
<i>T. Kalganova, J. F. Miller, and T. C. Fogarty</i>	
Adaptation in Co-evolving Non-uniform Cellular Automata . . . . .	90
<i>V. Vassilev and T. C. Fogarty</i>	
Synthesis of Synchronous Sequential Logic Circuits from Partial Input/Output Sequences . . . . .	98
<i>C. Manovit, C. Aporn Dewan, and P. Chongstitvatana</i>	
Data Compression for Digital Color Electrophotographic Printer with Evolvable Hardware . . . . .	106
<i>M. Tanaka, H. Sakanashi, M. Salami, M. Iwata, T. Kurita, and T. Higuchi</i>	
Comparison of Evolutionary Methods for Smoother Evolution . . . . .	115
<i>T. Hikage, H. Hemmi, and K. Shimohara</i>	

## Evolution of Analog Systems

Automated Analog Circuit Synthesis Using a Linear Representation . . . . .	125
<i>J. D. Lohn and S. P. Colombano</i>	

Analogue EHW Chip for Intermediate Frequency Filters . . . . .	134
<i>M. Murakawa, S. Yoshizawa, T. Adachi, S. Suzuki, K. Takasuka, M. Iwata, and T. Higuchi</i>	
Intrinsic Circuit Evolution Using Programmable Analogue Arrays . . . . .	144
<i>S. J. Flockton and K. Sheehan</i>	
Analog Circuits Evolution in Extrinsic and Intrinsic Modes . . . . .	154
<i>R. S. Zebulum, M. A. Pacheco, and M. Vellasco</i>	
Evolvable Hardware for Space Applications . . . . .	166
<i>A. Stoica, A. Fukunaga, K. Hayworth, and C. Salazar-Lazaro</i>	
<b>Embryonic Electronics</b>	
Embryonics: A Macroscopic View of the Cellular Architecture . . . . .	174
<i>D. Mange, A. Stauffer, and G. Tempesti</i>	
Embryonics: A Microscopic View of the Molecular Architecture . . . . .	185
<i>D. Mange, A. Stauffer, and G. Tempesti</i>	
Modeling Cellular Development Using L-Systems . . . . .	196
<i>A. Stauffer and M. Sipper</i>	
MUXTREE Revisited: Embryonics as a Reconfiguration Strategy in Fault-Tolerant Processor Arrays . . . . .	206
<i>C. Ortega-Sánchez and A. Tyrrell</i>	
<b>Bio-inspired Systems</b>	
Building Complex Systems Using Developmental Process: An Engineering Approach . . . . .	218
<i>H. Kitano</i>	
Evolving Batlike Pinnae for Target Localisation by an Echolocator . . . . .	230
<i>H. Peremans, V. A. Walker, G. Papadopoulos, and J. C. T. Hallam</i>	
A Biologically Inspired Object Tracking System . . . . .	240
<i>R. DuBois</i>	
The “Modeling Clay” Approach to Bio-inspired Electronic Hardware . . . .	248
<i>K. Hayworth</i>	
<b>Artificial Neural Networks</b>	
A “Spike Interval Information Coding” Representation for ATR’s CAM-Brain Machine (CBM) . . . . .	256
<i>M. Korkin, N. E. Nawa, and H. de Garis</i>	
Learning in Genetic Algorithms . . . . .	268
<i>E. Gelenbe</i>	

Back-Propagation Learning of Autonomous Behavior: A Mobile Robot Khepera Took a Lesson from the Future Consequences . . . . .	280
<i>K. Murase, T. Wakida, R. Odagiri, W. Yu, H. Akita, and T. Asai</i>	
SPIKE_4096: A Neural Integrated Circuit for Image Segmentation . . . . .	287
<i>J.-L. Rebourg, J.-D. Muller, and M. Samuelides</i>	

## **Adaptive Robotics**

Analysis of the Scenery Perceived by a Real Mobile Robot Khepera . . . . .	295
<i>R. Odagiri, W. Yu, T. Asai, and K. Murase</i>	
Evolution of a Control Architecture for a Mobile Robot . . . . .	303
<i>M. Ebner</i>	

## **Adaptive Hardware Platforms**

Field Programmable Processor Arrays . . . . .	311
<i>P. Nussbaum, B. Girau, and A. Tisserand</i>	
General-Purpose Computer Architecture Based on Fully Programmable Logic . . . . .	323
<i>K. Oguri, N. Imlig, H. Ito, K. Nagami, R. Konishi, and T. Shiozawa</i>	
Palmo: Field Programmable Analogue and Mixed-Signal VLSI for Evolvable Hardware . . . . .	335
<i>A. Hamilton, K. Papathanasiou, M. R. Tamplin, and T. Brandtner</i>	
Feasible Evolutionary and Self-Repairing Hardware by Means of the Dynamic Reconfiguration Capabilities of the FIPSOC Devices . . . . .	345
<i>J. M. Moreno, J. Madrenas, J. Faura, E. Cantó, J. Cabestany, and J. M. Insenser</i>	
Fault Tolerance of a Large-Scale MIMD Architecture Using a Genetic Algorithm . . . . .	356
<i>P. Millet and J.-C. Heudin</i>	
Hardware Evolution with a Massively Parallel Dynamically Reconfigurable Computer: POLYP . . . . .	364
<i>U. Tangen and J. S. McCaskill</i>	

## **Molecular Computing**

Molecular Inference via Unidirectional Chemical Reactions . . . . .	372
<i>J. J. Mulawka and M. J. Oćwieja</i>	

<b>Author Index</b> . . . . .	381
