

Mildred S. Dresselhaus Gene Dresselhaus
Phaedon Avouris (Eds.)

Carbon Nanotubes

Synthesis, Structure, Properties, and Applications

With 235 Figures

Springer

Contents

Introduction to Carbon Materials Research

Mildred S. Dresselhaus and Phaedon Avouris	1
1. Historical Introduction	1
2. Basic Background	3
References	8

Relation of Carbon Nanotubes to Other Carbon Materials

Mildred S. Dresselhaus and Morinobu Endo	11
1. Bonding Between Carbon Atoms	12
2. Graphite	14
3. Graphite Whiskers	17
4. Carbon Fibers	17
4.1. History of Carbon Fibers in Relation to Carbon Nanotubes	21
5. Liquid Carbon	23
6. Graphite Intercalation Compounds	25
References	26

Nanotube Growth and Characterization

Hongjie Dai	29
1. Nanotube Growth Methods	30
1.1. Arc-Discharge and Laser Ablation	30
1.2. Chemical Vapor Deposition	32
1.2.1. General Approach and Mechanism	32
1.2.2. Single-Walled Nanotube Growth and Optimization	34
1.2.3. Growth Mode of Single-Walled Nanotubes in CVD	38
1.3. Gas Phase Catalytic Growth	39
2. Controlled Nanotube Growth by Chemical Vapor Deposition	39
2.1. Aligned Multi-Walled Nanotube Structures	40
2.2. Directed Growth of Single-Walled Nanotubes	41
2.3. Growth of Isolated Nanotubes on Specific Surface Sites	44

2.4. From Growth to Molecular-Wire Devices	45
2.4.1. Electrical Properties of Individual Nanotubes	45
2.4.2. Nanotube Electromechanical Properties and Devices	47
3. Conclusions	50
References	51

Growth Mechanisms of Carbon Nanotubes

Jean-Christophe Charlier and Sumio Iijima	55
1. Experimental Facts for Growth Models	56
2. Open- or Close-Ended Growth for Multi-walled Nanotubes ?	57
3. Macroscopic Model for Multi-walled Nanotube Growth	63
4. "Lip lip" Interaction Models for Multi-walled Nanotube Growth	63
5. Is Uncatalyzed Growth Possible for Single-Shell Nanotubes ?	66
6. Catalytic Growth Mechanisms for Single-Shell Nanotubes	67
7. Catalytic Growth Mechanism for Nanotube Bundles	73
8. Root Growth Mechanism for Single-Shell Nanotubes	75
9. Conclusion	77
References	79

Nanotubes from Inorganic Materials

Reshef Tenne and Alex K. Zettl	81
1. Categorizing Different Inorganic Compounds Forming Nanotubular Structures	84
2. Synthesis of Inorganic Nanotubes	85
3. Thermodynamic and Topological Considerations	96
4. Physical Properties	98
4.1. Band Structure Calculations	99
4.2. Optical Studies in the UV and Visible	101
4.3. Raman Spectroscopy	104
4.4. Mechanical Properties	105
5. Applications	107
6. Conclusions	108
References	109

Electronic Properties, Junctions, and Defects of Carbon Nanotubes

Steven G. Louie	113
1. Geometric and Electronic Structure of Carbon Nanotubes	114
2. Electronic and Transport Properties of On-Tube Structures	121
2.1. Nanotube Junctions	122
2.2. Impurities, Stone-Wales Defects, and Structural Deformations in Metallic Nanotubes	128

3. Nanotube Ropes, Crossed-Tube Junctions, and Effects of Long-Range Perturbations	133
3.1. Ropes of Nanotubes	133
3.2. Crossed-Tube Junctions	135
3.3. Effects of Long-Range Disorder and External Perturbations	137
4. Summary	141
References	142

Electrical Transport Through Single-Wall Carbon Nanotubes

Zhen Yao, Cees Dekker and Phaedon Avouris

1. Transport in Individual Nanotubes	148
1.1. Device Geometry and Room-Temperature Characterization	148
1.1.1. Electrical Contacts	148
1.1.2. Field-Effect Transistors with Semiconducting Nanotubes .	150
1.2. Low-Temperature Mesoscopic Electron Transport	151
1.2.1. Coulomb Blockade and Transport Spectroscopy	151
1.2.2. Superconducting Proximity Effect	153
1.3. Electron- Electron and Electron-Phonon Interactions	154
1.3.1. Electron Correlations and Luttinger-Liquid Behavior. . .	154
1.3.2. Large-Bias Transport and Phonon Scattering	157
1.4. Nanotube Junctions and Electromechanical Effects	158
1.4.1. Intramolecular Junctions	158
1.4.2. Crossed Junctions	159
1.4.3. Electromechanical Effects	160
1.5. Summary	160
2. Transport in Single Wall Nanotube Ropes	161
2.1. Scattering and Localization Phenomena	161
2.1.1. Weak Localization	161
2.1.2. Spin Effects	166
2.1.3. Strong Localization	166
2.2. Inter-Tube Transport in Nanotube Ropes	167
3. Conclusion	168
References	168

Scanning Probe Microscopy Studies of Carbon Nanotubes

Teri Wang Odom, Jason H. Hafner and Charles M. Lieber

1. Expectations from Theory	174
2. Scanning Tunneling Microscopy Studies of Electronic Properties of Nanotubes	176
2.1. Atomic Structure and Electronic Properties of Single-Walled Carbon Nanotubes	176
2.1.1. Carbon Nanotube Atomic Structure	177
2.1.2. Spectroscopy: Metals and Semiconductors	178

XII Contents

2.2. One-Dimensional Band Structure of Nanotubes.	179
2.3. Localized Structures in Nanotubes.	182
2.3.1. Bent and Twisted Nanotubes.	182
2.3.2. SWNT Ends: Structure and Electronic Properties.	184
2.4. Finite-Size SWNTs.	185
2.4.1. Quantum Effects in Carbon Nanotubes.	186
2.4.2. Coulomb Charging in SWNTs.	189
2.5. Future Directions.	190
3. Manipulation of Nanotubes with Scanning Probe Microscopies.	191
3.1. Manipulation of Nanotubes on Surfaces.	191
3.2. Nanotube Mechanical Properties.	194
3.3. Making Nanotube Devices.	195
4. Nanotube Probe Microscopy Tips.	197
4.1. Mechanical Assembly of Nanotube Tips.	198
4.2. CVD Growth of Nanotube Tips.	199
4.3. Resolution of Nanotube Probes.	201
4.4. Applications in Structural Biology.	202
4.5. Applications in Chemical Force Microscopy and Force Spectroscopy.	204
5. Conclusions.	206
References.	207

Optical Properties and Raman Spectroscopy of Carbon Nanotubes

Riichiro Saito and Hiromichi Kataura.	213
1. Theoretical Issues.	214
1.1. Electronic Structure and Density of States of SWNTs.	214
1.2. Trigonal Warping Effects in the DOS Windows.	220
1.3. Phonon Properties.	224
2. Experiment Issues.	226
2.1. Diameter-Selective Formation of SWNTs.	226
2.2. Sample Preparation and Purification.	227
2.3. Diameter-Dependent Optical Absorption.	228
2.4. Diameter-Dependent Resonance Raman Scattering.	231
2.5. Stokes and Anti-Stokes Spectra in Resonant Raman Scattering.	234
2.6. Bundle Effects on the Optical Properties of SWNTs (Fano Effect).	236
2.7. Resonance Raman Scattering of MWNTs.	239
3. Summary.	242
References.	244

Electron Spectroscopy Studies of Carbon Nanotubes

Jorg H. Fink and Philippe Lambin	247
1. Electron Spectroscopies	248
2. Graphite and Ceo	251
3. Occupied States of Carbon Nanotubes	257
4. Unoccupied States of Carbon Nanotubes	261
5. Excited States on Carbon Nanotubes	261
6. Intercalated Single-Wall Nanotubes	267
7. Summary	269
References	270

Phonons and Thermal Properties of Carbon Nanotubes

James Hone	273
1. Specific Heat	273
1.1. Specific Heat of 2-D Graphene and 3-D Graphite	273
1.2. Specific Heat of Nanotubes	275
1.3. Specific Heat of SWNT Ropes and MWNTs	277
1.4. Measured Specific Heat of SWNTs and MWNTs	278
2. Thermal Conductivity	281
2.1. Thermal Conductivity of MWNTs	282
2.2. Thermal Conductivity of SWNTs	283
References	285

Mechanical Properties of Carbon Nanotubes

Boris I. Yakobson and Phaedon Avouris	287
1. Mechanical Properties and Mesoscopic Duality of Nanotubes	287
2. Mechanics of the Small: Common Definitions	289
3. Experimental Observations	291
3.1. Measurements of the Young's modulus	292
3.2. Evidence of Nonlinear Mechanics and Resilience of Nanotubes	294
3.3. Attempts of Strength Measurements	297
4. Theoretical and Computational Models	299
4.1. Theoretical Results on Elastic Constants of Nanotubes	299
4.2. Nonlinear Elastic Deformations and Shell Model	302
4.3. Atomistics of High Strain-Rate Failure	308
4.4. Yield Strength and Relaxation Mechanisms in Nanotubes	310
5. Supramolecular Interactions	317
5.1. Nanotube-Substrate and Nanotube-Nanotube Interactions: Binding and Distortions	317
5.2. Manipulation of the Position and Shape of Carbon Nanotubes	319
5.3. Self-Organization of Carbon Nanotubes: Nanotube Ropes, Rings, and Ribbons	320

6. Summary: Nanomechanics at a Glance	323
References	325

Physical Properties of Multi-wall Nanotubes

Laszlo Forro and Christian Schonenberger	329
1. Production Methods and Purification	330
2. Crystallographic Structure	332
2.1. Crystallographic Structure as Seen by HRTEM	332
2.2. Filling of Carbon Nanotubes	335
3. Electronic Properties of Multi-wall Carbon Nanotubes	337
3.1. Multi-wall Nanotubes in Relation to Graphene Sheets	338
3.2. Electrical Transport in MWNTs: A Brief Review	345
3.3. Hall-Effect and Thermopower in Assembled Nanotubes	346
3.4. Electrical Transport Measurement Techniques for Single MWNTs	349
3.5. Electrical Measurements on Single MWNTs	351
3.6. Magnetotransport	355
3.7. Spectroscopy on Contacted MWNTs	360
3.8. Spectroscopy Using Scanning Tunneling Probes	363
3.9. Discussion of the Main Issues	364
4. Magnetic Properties	365
4.1. Spin Relaxation in Quasi-1-D Systems	366
4.2. Spin Relaxation in Carbon Nanotubes	367
5. Field and Light Emission	370
5.1. Field Emission	371
5.2. Light Emission Coupled to Electron Emission	373
5.3. Light Emission Induced by STM	375
6. Mechanical Properties	376
6.1. Young's Modulus of MWNTs	378
6.2. Disorder Effect	379
6.3. Comparison with SWNTs	380
6.4. Deformation of MWNTs	381
7. Summary	383
References	384

Applications of Carbon Nanotubes

Pulickel M. Ajayan and Otto Z. Zhou	391
1. Potential Application of CNTs in Vacuum Microelectronics	394
1.1. Prototype Electron Emission Devices Based on Carbon Nanotubes	398
1.1.1. Cathode-Ray Lighting Elements	398
1.1.2. Flat Panel Display	399
1.1.3. Gas-Discharge Tubes in Telecom Networks	399

2. Energy Storage.....	401
2.1. Electrochemical Intercalation of Carbon Nanotubes with Lithium.....	402
2.2. Hydrogen Storage.....	404
3. Filled Composites.....	406
4. Nanoprobes and Sensors.....	413
5. Templates.....	415
6. Challenges and Potential for Carbon Nanotube Applications.....	418
7. Conclusions.....	420
