

Richard Tolimieri Myoung An Chao Lu

Algorithms for Discrete Fourier Transform and Convolution

Second Edition

C.S. Burrus
Consulting Editor

Springer

Contents

Preface	v
1 Review of Applied Algebra	1
1.1 Introduction	1
1.2 The Ring of Integers	2
1.3 The Ring \mathbf{Z}/N	5
1.4 Chinese Remainder Theorem (CRT)	7
1.5 Unit Groups	11
1.6 Polynomial Rings	13
1.7 Field Extension	17
1.8 The Ring $F[x]/f(x)$	18
1.9 CRT for Polynomial Rings	21
References	23
Problems	23
2 Tensor Product and Stride Permutation	27
2.1 Introduction	27
2.2 Tensor Product	28
2.3 Stride Permutations	33
2.4 Multidimensional Tensor Products	40
2.5 Vector Implementation	44
2.6 Parallel Implementation	50
References	53
Problems	53

3	Cooley-Tukey FFT Algorithms	55
3.1	Introduction	55
3.2	Basic Properties of FT Matrix	56
3.3	An Example of an FT Algorithm	57
3.4	Cooley-Tukey FFT for $N = 2M$	59
3.5	Twiddle Factors	61
3.6	FT Factors	63
3.7	Variants of the Cooley-Tukey FFT	64
3.8	Cooley-Tukey FFT for $N = ML$	66
3.9	Arithmetic Cost	68
	References	69
	Problems	70
4	Variants of FT Algorithms and Implementations	71
4.1	Introduction	71
4.2	Radix-2 Cooley-Tukey FFT Algorithm	72
4.3	Pease FFT Algorithm	76
4.4	Auto-Sorting FT Algorithm	79
4.5	Mixed Radix Cooley-Tukey FFT	81
4.6	Mixed Radix Agarwal-Cooley FFT	84
4.7	Mixed Radix Auto-Sorting FFT	85
4.8	Summary	87
	References	89
	Problems	90
5	Good-Thomas PFA	91
5.1	Introduction	91
5.2	Indexing by the CRT	92
5.3	An Example, $N = 15$	93
5.4	Good-Thomas PFA for the General Case	96
5.5	Self-Sorting PFA	98
	References	99
	Problems	100
6	Linear and Cyclic Convolutions	101
6.1	Definitions	101
6.2	Convolution Theorem	107
6.3	Cook-Toom Algorithm	111
6.4	Winograd Small Convolution Algorithm	119
6.5	Linear and Cyclic Convolutions	125
6.6	Digital Filters	131
	References	133
	Problems	134

7	Agarwal-Cooley Convolution Algorithm	137
7.1	Two-Dimensional Cyclic Convolution	137
7.2	Agarwal-Cooley Algorithm	142
	References	145
	Problems	145
8	Multiplicative Fourier Transform Algorithm	147
	References	153
9	MFTA: The Prime Case	155
9.1	The Field Z/p	155
9.2	The Fundamental Factorization	157
9.3	Rader's Algorithm	162
9.4	Reducing Additions	163
9.5	Winograd Small FT Algorithm	167
9.6	Summary	169
	References	171
	Problems	171
10	MFTA: Product of Two Distinct Primes	173
10.1	Basic Algebra	173
10.2	Transform Size: 15	175
10.3	Fundamental Factorization: 15	176
10.4	Variants: 15	178
10.5	Transform Size: pq	181
10.6	Fundamental Factorization: pq	183
10.7	Variants	185
10.8	Summary	189
	References	190
	Problems	191
11	MFTA: Composite Size	193
11.1	Introduction	193
11.2	Main Theorem	193
11.3	Product of Three Distinct Primes	196
11.4	Variants	197
11.5	Transform Size: 12	198
11.6	Transform Size: $4p$, p odd prime	198
11.7	Transform Size: 60	199
	References	202
	Problems	202
12	MFTA: p^2	203
12.1	Introduction	203
12.2	An Example: 9	203

12.3	The General Case: p^2	206
12.4	An Example: 3^3	212
	References	214
	Problems	215
13	Periodization and Decimation	217
13.1	Introduction	217
13.2	Periodic and Decimated Data	220
13.3	FT of Periodic and Decimated Data	223
13.4	The Ring \mathbf{Z}/p^m	225
	Problems	227
14	Multiplicative Characters and the FT	229
14.1	Introduction	229
14.2	Periodicity	232
	14.2.1 Periodic Multiplicative Characters	232
	14.2.2 Periodization and Decimation	235
14.3	$\mathbf{F}(p)$ of Multiplicative Characters	237
14.4	$\mathbf{F}(p^m)$ of Multiplicative Characters	239
	14.4.1 Primitive Multiplicative Characters	239
	14.4.2 Nonprimitive Multiplicative Characters	240
14.5	Orthogonal Basis Diagonalizing $\mathbf{F}(p)$	242
14.6	Orthogonal Basis Diagonalizing $\mathbf{F}(p^m)$	245
	14.6.1 Orthogonal Basis of W	245
	14.6.2 Orthogonal Diagonalizing Basis	246
	References	247
	Problems	248
15	Rationality	249
15.1	An Example: 7	250
15.2	Prime Case	252
15.3	An Example: 3^2	254
15.4	Transform Size: p^2	256
15.5	Exponential Basis	260
15.6	Polynomial Product Modulo a Polynomial	260
15.7	An Example: 3^3	262
	References	264
	Index	265
