

Horst Entorf

Mismatch Explanations of European Unemployment

A Critical Evaluation

Acting Editor: Michele Fratianni

With 18 Figures
and 36 Tables

Springer

Contents

1. Introduction	1
1.1. European unemployment and the mismatch hypothesis	1
1.2. The conceptual framework followed in this book	5
1.3. Overview and results	7
2. Do aggregate measures of mismatch measure mismatch?	
A time series analysis of existing concepts	11
2.1. Introduction	11
2.2. Some puzzling evidence	12
2.3. Measuring mismatch: Theoretical foundations	18
2.4. Measurement problems	24
2.5. Disaggregation and unobserved heterogeneity	27
2.6. Time series analysis	29
2.7. Testing for unit roots	31
2.8. On the magnitude of drifts in macroeconomic mismatch time series	38
2.9. Some simulation experiments	41
2.10. Concluding remarks	43
Appendix A2	45
3. Disaggregate matching functions, spurious mismatch and occupational reallocation in Germany	55
3.1. Introduction	55
3.2. Aggregate matching functions: Theoretical framework	58
3.3. Aggregate matching functions in West Germany	62
3.4. Spurious matching functions	70
3.4.1. The econometric theory of spurious matching functions	70
3.4.2. Simulated evidence	71
3.5. Disaggregate matching functions using a panel of occupational groups	77
3.5.1. Occupational <i>UV</i> -curves	77
3.5.2. Nonsense regressions with panel data?	79
3.5.3. Panel data estimations for disaggregate matching functions	80

3.5.4. Substituting the time trend by economic variables	84
3.5.5. Period effects and the identification of mismatch	84
3.6. On occupational reallocation: Theoretical and empirical aspects	92
3.6.1. Matching functions and the adjustment of unemployment/vacancy ratios	92
3.6.2. Empirical evidence	94
3.7. Understanding the matching of apprentices	99
3.7.1. The economic problem	99
3.7.2. Towards a reduced-form-matching function for apprentices	100
3.7.3. Panel estimations	102
3.7.4. Backward-looking behaviour and future rigidities	106
3.8. Concluding remarks	107
Appendix A3	111
A3.I. Data	111
A3.II. Spurious regressions	113
A3.III. List of occupational groups	133
A3.IV. Panel data modelling	135
4. Matching and new technologies: Does unmeasured ability explain the higher wages of new-technology workers?	139
4.1. Introduction	139
4.2. Matching, mobility, and unmeasured ability	141
4.3. The micro datasets: Presentation and descriptive analysis	145
4.3.1. INSEE data sources	145
4.3.2. The definition of "new technology" categories	146
4.3.3. "New technologies" and "organization of the work place"	149
4.3.4. Variables representing the firm-level background of individual workers	152
4.4. Cross-sectional results	153
4.4.1. Specifying the wage equation	153
4.4.2. Some theoretical and empirical reasons to include firm-level variables	154
4.4.3. The impact of new technologies on wages: Global results	156
4.4.4. The impact of new technologies on occupational wages	161

4.4.5. Mismatch related to new-technology use	162
4.5. Wages and new technologies: Evidence from panel data	167
4.5.1. Construction of panel data	167
4.5.2. The impact of new technologies on wages: Fixed-effect modelling	168
4.6. Concluding remarks	171
Appendix A4	172
A4.I. Descriptive statistics	172
A4.II. Definition of educational degrees	179
A4.III. Additional cross-sectional results	180
5. Conclusions	191
6. References	197
