<b>Preface</b>	ix
<b>Glossary of terms</b>	xi
<b>1 The functions of metals in micro-organisms</b>	1
1.1 Introduction	1
1.2 The essential metals	3
1.3 Metal-binding sites in biological molecules	9
1.4 Electronic properties of transition metal complexes	22
1.5 Roles for metals	27
1.6 Selective binding of metals	33
1.7 Summary	37
<b>2 Metal nutrition: the supply and analysis of metals in microbial cultures</b>	39
2.1 Introduction	39
2.2 Provision of metals in growth media	41
2.3 Removal of metal ions from growth media	44
2.4 Examples of requirements for specific metals and the consequences of deficiency	49
2.5 The quantitative determination of metals in microbiological material and media	75
2.6 Instrumental techniques in the study of metals and micro-organisms	82
2.7 Summary	90
<b>3 Metal transport</b>	93
3.1 Introduction	93
3.2 Iron transport in prokaryotic and eukaryotic micro-organisms	96

3.3	Potassium transport in bacteria	108
3.4	Magnesium transport in bacteria	113
3.5	Manganese transport in bacteria	117
3.6	Zinc transport in bacteria	120
3.7	Calcium transport in bacteria	120
3.8	Sodium transport in bacteria	126
3.9	Nickel transport in bacteria	130
3.10	Molybdenum transport in bacteria	131
3.11	Bacterial transport of other metals and metalloids	132
3.12	Metal ion transport in eukaryotic micro-organisms	132
3.13	Summary	139
<b>4</b>	<b>The IA and IIA cations</b>	<b>141</b>
4.1	Introduction	141
4.2	The IA cations, Na <sup>+</sup> and K <sup>+</sup>	141
4.3	Magnesium and manganese	147
4.4	Calcium	163
4.5	Summary	175
<b>5</b>	<b>Special roles for the transition elements and zinc</b>	<b>177</b>
5.1	Introduction	177
5.2	Proteins containing iron as haem	179
5.3	Iron-sulphur proteins	194
5.4	Oxygenases: iron- or copper-containing enzymes	204
5.5	Iron-storage proteins	210
5.6	Other roles for iron in enzymes	211
5.7	Microbial oxidation of iron	211
5.8	Microbial reduction of iron	212
5.9	Iron in magnetotactic bacteria	215
5.10	Roles for copper	218
5.11	Superoxide dismutases	223
5.12	Manganese	230
5.13	Iron and cobalt in nucleotide and nucleic acid biosynthesis and degradation	232
5.14	Molybdenum	234
5.15	Nickel	240
5.16	Zinc	245
5.17	Cobalt	248
5.18	Summary	249
<b>6</b>	<b>Metal toxicity</b>	<b>252</b>
6.1	Introduction	252

6.2	Binding and transport of toxic metals	257
6.3	Bacterial transformations of toxic metals and metalloids elements	264
6.4	Plasmid-determined resistance mechanisms	280
6.5	Resistance by metal deposition	285
6.6	Metallothionein-like proteins	287
6.7	Toxic effects of selected metals and their compounds	289
6.8	The use of metal compounds as antimicrobial agents	297
6.9	Summary	301
<b>7</b>	<b>Metals, micro-organisms and biotechnology</b>	<b>303</b>
7.1	Introduction	303
7.2	Reserves of metallic ores	304
7.3	The extraction of metals from low grade or refractory ores using mineral-oxidizing bacteria	305
7.4	Removal or recovery of metal ions and compounds from solution by microbiological methods	328
7.5	Corrosion and other adverse effects arising from metal–microbe interactions	353
7.6	Summary	357
	<b>References</b>	<b>359</b>
	<b>Index</b>	<b>396</b>
