

Progress in Colloid and Polymer Science

Editors: F. Kremer, Leipzig and G. Lagaly, Kiel

Volume 113 · 1999

Analytical Ultracentrifugation V

Volume Editor:

H. Cölfen

Springer

715

H. Cölfen	Preface	V
Technical and methodological innovations		
W. Mächtle:	The installation of an eight-cell Schlieren optics multiplexer in a Beckman Optima XLI/XL analytical ultracentrifuge used to measure steep refractive index gradients	1
D. Kisters, W. Borchard:	New facilities to improve the properties of Schlieren optics	10
P. Lavrenko, V. Lavrenko, V. Tsvetkov:	Shift interferometry in analytical ultracentrifugation of polymer solutions	14
L. Börger, H. Cölfen:	Investigation of the efficiencies of stabilizers for nanoparticles by synthetic boundary crystallization ultracentrifugation	23
Innovations in data analysis		
D. Kisters, H. Cölfen, W. Borchard:	A comparison of evaluation methods for sedimentation velocity data of polymer solutions	29
M.D. Lechner, W. Mächtle:	Determination of the particle size distribution of 5–100-nm nanoparticles with the analytical ultracentrifuge: consideration and correction of diffusion effects	37
H. Cölfen, K. Schilling:	Pseudo synthetic boundary experiments: a new approach to the determination of diffusion coefficients from sedimentation velocity experiments	44
K. Schilling, H. Cölfen:	Application of the solvent density variation method to sedimentation velocity experiments on biological systems	50
A.D. Molina-García:	Hydrostatic pressure in ultracentrifugation (revisited)	57
D.R. Hall, S.E. Harding, D.J. Winzor:	The correct analysis of low-speed sedimentation equilibrium distributions recorded by the Rayleigh interference optical system in a Beckman XL-I ultracentrifuge	62
D.J. Winzor, M.P. Jacobsen, P.R. Wills:	Allowance for thermodynamic nonideality in the analysis of sedimentation equilibrium distributions reflecting complex formation between dissimilar reactants	69
Hydrodynamics/Modeling		
G.M. Pavlov, S.E. Harding, A.J. Rowe:	Normalized scaling relations as a natural classification of linear macromolecules according to size	76
J. Garcia de la Torre, B. Carrasco:	Universal size-independent quantities for the conformational characterization of rigid and flexible macromolecules	81
H. Durchschlag, P. Zipper:	Calculation of structural parameters from hydrodynamic data	87
P. Zipper, H. Durchschlag:	Prediction of hydrodynamic parameters from 3D structures	106

Synthetic polymers, colloids and supramolecular systems

C. Tziatzios, H. Durchschlag, B. Sell, J.A. van den Broek, W. Mächtle, W. Haase, J.-M. Lehn, C.H. Weidl, C. Eschbaumer, D. Schubert, U.S. Schubert:	Solution properties of supramolecular cobalt coordination arrays . . .	114
A. Böhm, S. Kielhorn-Bayer, P. Rossmannith:	Working with multidetection in the analytical ultracentrifuge: the benefits of the combination of a refractive index detector and an absorption detector for the analysis of colloidal systems	121
N.A. Chebotareva, B.I. Kurganov, A.A. Burlakova:	Sedimentation velocity analysis of oligomeric enzymes in hydrated reversed micelles of surfactants in organic solvents	129
K.-J. Tiefenbach, H. Durchschlag, R. Jaenicke:	Spectroscopic and hydrodynamic investigations of nonionic and zwitterionic detergents	135
A. Hammond, P.M. Budd, C. Price:	Microemulsion polymerization of butyl acrylate and methyl methacrylate	142
G.M. Pavlov, E.V. Korneeva, R. Roy, N.A. Michailova, P.C. Ortega, M.A. Perez:	Sedimentation, translational diffusion, and viscosity of lactosylated polyamidoamine dendrimers	150
Biological systems		
R.I. Bayliss, N. Errington, O. Byron, A. Svensson, A. Rowe:	A conformation spectrum analysis of the morphological states of myosin SI in the presence of effectors	158
M.D. Kirkitadze, K. Jumel, S.E. Harding, D.T.F. Dryden, M. Krych, J.P. Atkinson, P.N. Barlow:	Combining ultracentrifugation with fluorescence to follow the unfolding of modules 16–17 of complement receptor type 1	164
B. Kernel, G. Zaccai, C. Ebel:	Determination of partial molal volumes, and salt and water binding, of highly charged biological macromolecules (tRNA, halophilic protein) in multimolar salt solutions	168
G. Mayer, B. Ludwig, H.-W. Müller, J.A. van den Broek, R.H.E. Friesen, D. Schubert:	Studying membrane proteins in detergent solution by analytical ultracentrifugation: different methods for density matching	176
J. Behlke, O. Ristau:	Analytical ultracentrifugation of the nitrogenase of <i>Azotobacter vinelandii</i> under anaerobic conditions	182
T. Tongdang, H.F.J. Bligh, K. Jumel, S.E. Harding:	Combining sedimentation velocity with SEC-MALLS to probe the molecular structure of heterogeneous macromolecular systems that cannot be preparatively separated: application to three rice starches	185
P. Lavrenko, O. Okatova, H. Dautzenberg:	Inhomogeneity and conformational parameters of low-substituted carboxymethyl cellulose from analytical ultracentrifugation data	192
G.A. Morris, A. Ebringerova, S.E. Harding, Z. Hromadkova:	UV tagging leaves the structural integrity of an arabino- (4-O-methylglucurono)xylan polysaccharide unaffected	201

G.A. Morris, S.N.G. Butler, T.J. Foster, K. Jumel, S.E. Harding:	Elevated-temperature analytical ultracentrifugation of a low-methoxy polyuronide	205
Interacting systems and assemblies		
D.J. Scott, S. Leejeerajumnean, J.A. Brannigan, R.J. Lewis, A.J. Wilkinson, J.G. Hoggett:	Towards deconvoluting the interaction of the <i>Bacillus subtilis</i> sporulation proteins SinR and SinI using tryptophan analogue incorporated proteins	209
D.J. Scott, A.L. Ferguson, M. Buck, M.-T. Gallegos, M. Pitt, J.G. Hoggett:	Use of the tryptophan analogue 7-azatryptophan to study the interaction of σ^N with <i>Escherichia coli</i> RNA polymerase core enzyme	212
C. Walters, M. Cliff, A. Clarke, S.E. Harding:	Nonequilibrium self-association of a cpn60 chaperonin induced by tryptophan mutation	216
